

Department of Mathematical Sciences

Course Structure and Syllabus of Integrated M.Sc. in Mathematics

(for 2013 entry batch onwards)

Minimum credit requirement : 199

Minimum duration : 5 years (10 semesters)

Maximum duration : 7 years (14 semesters)

COURSE STRUCTURE

Semester I

Course Code	Course Name	L-T-P	CH	CR	Remark
PI 101	Physics-I	2-0-1	4	3	
CI 101	Chemistry-I	2-0-2	6	4	
BI 101	Biology-I	2-0-1	4	3	
MI 101	Mathematics-I	2-1-0	3	3	
	CBCT Elective-I			3	CBCT
	CBCT Elective-II			3	CBCT
Total credits				19	

Semester II

Course Code	Course Name	L-T-P	CH	CR	Remark
PI 102	Physics-II	2-0-1	4	3	
CI 102	Chemistry-II	2-0-2	6	4	
BI 102	Biology-II	2-0-1	4	3	
MI 102	Mathematics-II	2-1-0	3	3	
	CBCT Elective-III			3	CBCT
	CBCT Elective-IV			3	CBCT
NS 102	National Service Scheme	0-0-2	4	2	
Total credits				21	

Semester III

Course Code	Course Name	L-T-P	CH	CR	Remark
MI 211	Numerical Methods and integrals	2-1-0	3	3	Common Paper
MI 213	Set Theory and Mathematical Logic	2-1-0	3	3	
MI 215	Classical Algebra	2-1-0	3	3	
MI 207	Co-ordinate Geometry	2-1-0	3	3	
PI 211	Quantum Physics	2-1-0	3	3	
	CBCT Elective-V			3	CBCT
Total credits				18	

Semester IV

Course Code	Course Name	L-T-P	CH	CR	Remark
MI 212	Introductory Statistics	2-1-0	3	3	Common Paper
MI 210	Elementary Abstract Algebra	2-1-0	3	3	
MI 214	Linear Space and Linear Programming	2-1-0	3	3	
MI 216	Elementary real analysis	2-1-0	3	3	
PI 216/ BI 224	Thermodynamics and Optics / Ecology and Environmental Biology	2-1-0/ 2-1-0	3/ 3	3/ 3	
	CBCT Elective-VI			3	CBCT
Total credits				18	

Semester V

Course Code	Course Name	L-T-P	CH	CR	Remark
MI 301	Computer Programming ⁺	3-1-0	4	4	
MI 303	Real Analysis	3-1-0	4	4	
MI 208	Linear Algebra	3-1-0	4	4	
MI 309	Computer Laboratory	0-0-2	4	2	
MI 209	Statics and Dynamics	2-1-0	3	3	
	CBCT Elective-VII			3	CBCT
Total credits				20	

Semester VI

Course Code	Course Name	L-T-P	CH	CR	Remark
MI 304	Topology	3-1-0	4	4	
MI 312	Elementary Complex Analysis	2-1-0	3	3	
MI 403	Measure Theory	2-1-0	3	3	
MI 504	Mathematical Programming	2-1-0	3	3	
MI 308	Theory of Ordinary Differential Equations	3-1-0	4	4	

	CBCT Elective-VIII			3	CBCT
Total credits				20	

Semester VII

Course Code	Course Name	L-T-P	CH	CR	Remark
MI 306	Functional Analysis	3-1-0	4	4	
MI 411	Partial Differential Equations	3-1-0	4	4	
MI 409	Probability	2-1-0	3	3	
MI 305	Abstract Algebra	3-1-0	4	4	
MI 402	Advanced Analysis	2-1-0	3	3	
	CBCT Elective-IX			3	CBCT
Total credits				21	

Semester VIII

Course Code	Course Name	L-T-P	CH	CR	Remark
MI 408	Complex Analysis	3-1-0	4	4	
MI 302	Numerical Analysis ⁺	3-1-0	4	4	
MI 307	Elementary Number Theory	3-1-0	4	4	
MI 310	Computer Laboratory	0-0-2	4	2	
MI 410	Mathematical Methods	3-1-0	4	4	
	CBCT Elective-X			3	CBCT
Total credits				21	

Semester IX

Course Code	Course Name	L-T-P	CH	CR	Remark
MI 405	Graph Theory	3-1-0	4	4	
MI 406	Probability Theory	3-1-0	4	4	
MI 407	Mathematical Software	1-0-1	3	2	
	Open Elective I	3-1-0	4	4	
	Open Elective II	3-1-0	4	4	
MI 515	Project (to be continued to 10 th semester)	0-0-8	16	0	
	CBCT Elective-XI			3	CBCT
Total credits				21	

Semester X

Course Code	Course Name	L-T-P	CH	CR	Remark
-------------	-------------	-------	----	----	--------

MI 401	Classical Mechanics	3-1-0	4	4	
	Open Elective III	3-1-0	4	4	
	Open Elective IV	3-1-0	4	4	
MI 515	Project	0-0-8	16	8	
Total credits				20	

+ Course for which there is a separate practical unit assigned as Computer Laboratory

L: Lectures T: Tutorials P: Practical CH: Contact Hours (all per week) CR: Credit

MI: Courses offer by the Department of Mathematical Sciences

PI: Courses offer by the Department of Physics

CI: Courses offer by the Department of Chemical Sciences

BI: Courses offer by the Department of Molecular Biology and Biotechnology

Total Credit : (19+21+18+18+20+20+21+21+21+20) = **199**

Total Credit in Lab & Project : (5+6+0+0+2+0+0+2+1+8) = **24**

Total Credit excluding Lab & Project: = **175**

Total Credit in CBCT : (6+6+3+3+3+3+3+3+3) = **33**

(Choice Based Credit Transfer)

Note: 1. CBCT Elective-I to CBCT Elective-VI are to be chosen from the list of CBCT courses given below.

Course Code	Course Name	L-T-P	CH	Credit	Remark
CS 535	Introduction to Scientific Computing	2-0-1	4	3	
EG 101	Communicative English	2-1-0	3	3	
ES 102	Elementary Environmental Science	2-1-0	3	3	
EG 102	Communicative English-II	2-1-0	3	3	Proposed to be introduced
SC 102	Basic Sociology	2-1-0	3	3	
ES 542	Laboratory Guidance and Safety	2-1-0	3	3	Proposed to be introduced
BM 101	Elementary Economics	2-1-0	3	3	
CL 121	Basic Chinese-I	2-1-0	3	3	Proposed to be introduced
FL 101	Basic French-I	2-1-0	3	3	Proposed to be introduced
GL 101	Basic German-I	2-1-0	3	3	Proposed to be introduced
DM 301	Disaster Management	2-1-0	3	3	Proposed to be introduced
CL 122	Basic Chinese- II	2-1-0	3	3	Proposed to be introduced
FL 102	Basic French-II	2-1-0	3	3	Proposed to be introduced

GL 102	Basic German-II	2-1-0	3	3	Proposed to be introduced
--------	-----------------	-------	---	---	---------------------------

2. CBCT Elective-VII to CBCT Elective-XI are to be chosen from the general list of CBCT courses available for that particular semester.
3. A student has to choose a minimum of three courses from the list of electives offered by the Department of Mathematical Sciences. The other elective course may be chosen from the Departments under the School of Science & Technology and the School of Engineering.

Electives to be offered from the following units:

Course Code	Course Name	L-T-P	CH	CR	Perquisites
MI 540	Mathematical Methods in Finance	3-1-0	4	4	Nil
MI 537	Stochastic Processes-I	3-1-0	4	4	MI 406
MI 538	Theory of Partial Differential Equation	3-1-0	4	4	MI 411
MI 539	Advanced Numerical Analysis	3-1-0	4	4	MI 302
MI 541	Fluid Mechanics	3-1-0	4	4	Nil
MI 542	Electrodynamics	3-1-0	4	4	Nil
MI 543	Relativity	3-1-0	4	4	Nil
MI 544	Operation Research	3-1-0	4	4	Nil
MI 545	Elliptic Curves	3-1-0	4	4	MI 305
MI 546	Algebraic Number Theory	3-1-0	4	4	MI 305
MI 547	Numerical Linear Algebra	3-1-0	4	4	Nil
MI 548	Mathematical Logic	3-1-0	4	4	Nil
MI 549	Graph Theory	3-1-0	4	4	Nil
MI 550	Discrete Mathematics	3-1-0	4	4	Nil
MI 551	Introduction to Category Theory	3-1-0	4	4	MI 208, 305, 304
MI 552	Operator Theory-I	3-1-0	4	4	MI 306
MI 554	Advanced Algebra-I	3-1-0	4	4	MI 305
MI 556	Quantum Mechanics-I	3-1-0	4	4	Nil
MI 557	Mathematical Modeling-I	3-1-0	4	4	Nil
MI 558	General Theory of Relativity	3-1-0	4	4	MI 543
MI 560	Sampling Techniques-I	3-1-0	4	4	Nil
MI 562	Statistical Quality Control	3-1-0	4	4	Nil
MI 564	Multivariate Analysis-I	3-1-0	4	4	Nil
MI 565	Fuzzy Sets and Applications-I	3-1-0	4	4	Nil
MI 566	Fourier Analysis	3-1-0	4	4	MI 306

MI 567	Continuum Mechanics	3-1-0	4	4	Nil
MI 568	Theory of Distribution and Sobolev Spaces	3-1-0	4	4	MI 306
MI 572	Operator Theory –II	3-1-0	4	4	MI 552
MI 573	Analytic Number Theory	3-1-0	4	4	MI 307
MI 574	Advanced Algebra-II	3-1-0	4	4	MI 305
MI 576	Quantum Mechanics –II	3-1-0	4	4	MI 556
MI 577	Mathematical Modeling-II	3-1-0	4	4	MI 557
MI 580	Sampling Techniques-II	3-1-0	4	4	MI 560
MI 581	Stochastic Processes –II	3-1-0	4	4	MI 501
MI 582	Reliability Theory	3-1-0	4	4	Nil
MI 584	Multivariate Analysis-II	3-1-0	4	4	MI 564
MI 585	Fuzzy Sets and Applications-II	3-1-0	4	4	MI 565
MI 586	Parallel Numerical Algorithms	3-1-0	4	4	Nil
MI 587	Finite Element Method	3-1-0	4	4	Nil
MI 588	Applied Matrix Theory	3-1-0	4	4	Nil
MI 591	Computational Fluid Dynamics	3-1-0	4	4	MI 541
MI 593	Wavelets and Applications	3-1-0	4	4	Nil
MI 594	Advanced Topology-I	3-1-0	4	4	MI 304
MI 595	Numerical Solutions of ODE	3-1-0	4	4	Nil
MI 596	Advanced Topology-II	3-1-0	4	4	MI 594
MI 597	Numerical Solutions of PDE	3-1-0	4	4	MI 507
MI 598	Algebraic Geometry	3-1-0	4	4	Nil

DETAILED SYLLABI

MI 101 Mathematics I (L2 -T1 -P0 -CH3 -CR 3)

Unit-1

Inequalities involving arithmetic, geometric, and harmonic means, Cauchy-Schwarz inequality.

Unit-2

Sequences: Cauchy sequence, Cauchy's General principle of convergence, Subsequences, Convergence and divergence of monotonic sequences, Sandwich theorem.

Infinite series: statements of basic properties of infinite series (without proofs), Convergence, Absolute and conditional convergences. Tests for convergence: Comparison test, Ratio test, Raabe's test, Leibnitz's test.

Unit-3

Functions of one variable: Limit, Continuity, Differentiability, Rolle's Theorem, Mean value theorems and applications, Taylor's theorem.

Unit-4

Critical points, convexity, curvature of plane curves, Asymptotes.

Curve tracing: tracing of catenary, cissoids, asteroid, cycloid, folium of Descartes, cardioid, lemniscate.

Unit-5

Functions of two or more variables: Limit, Continuity, Partial derivatives, Euler's theorem on homogeneous functions, Differentiability, Chain rule, Directional derivatives, Gradient vectors and Tangent planes, Taylor's theorem (statement only), Criteria for Maxima/Minima/Saddle points, Lagrange's method of multipliers.

Textbook(s)

1. Thomas and Finney, *Calculus and Analytic Geometry*, (Pearson Education, Eleventh (Indian) Edition), 1998.
2. Bartle, R. G. and Sherbert, D. R. *Introduction to Real Analysis*, (John Wiley and Sons, Third (Indian) Edition), 2007.

Reference book(s)

1. Apostol, T. M. *Calculus*, Vol I & II, (John Wiley and Sons, Second (Indian) Edition), 2007.
2. Mapa, S.K. *Higher Algebra*, (Asoke Prakashan, Kolkata), 2011.

MI 102 Mathematics II

(L2 -T1 -P0 -CH3 -CR 3)

Unit-1

Ordinary differential equations(ODE): Basic definitions: order and degree of differential equation, primitives, solutions of differential equations, Integral curves, isoclines, formulation of ODE, Linear and non-linear differential equations.

Unit-2

Variables separable equation, homogeneous and non-homogeneous equation, exact equations and integrating factors, linear and Bernoulli's equation, equations reducible to first order Clairaut's equation.

Unit-3

Second order Differential Equations: Linear equations with constant coefficients. Standard methods for solution of homogeneous and non-homogeneous linear differential equations, linear differential equations with variable coefficients and Method of Variation of Parameter.

Unit-4

Line integral, Double integral, triple integral, Jacobian, Surface integral and their applications. Space co-ordinates, lines and planes, Polar coordinates, Cylinders, Quadric surfaces, Volume, Area, length, volume and surface area of solids of revolution.

Unit-5

Vector Calculus, vector point function, continuity and differentiation of vector point function, partial derivative of vectors, Curl, Grade, Divergence; Green, Gauss and Stokes Theorem.

Textbook(s)

1. Boyce, William E. and Dprima, Richard, C. *Elementary Differential Equations*, (John Wiley, Indian Edition, 2000).
2. Spiegel, M. R. *Vector Analysis, Schaum's outline series*, (Publishing House India), 2009.
3. Thomas and Finney, *Calculus and Analytic Geometry*, (Pearson Education, Eleventh (Indian) Edition), 1998.

Reference book(s)

1. Jain, R. K. and Iyengar, S. R. K. *Advanced Engineering Mathematics*, Third Edition, (Narosa publishing house, India), 2009.
2. Ramana, B. V. *Higher Engineering Mathematics*, (McGraw Hill, India), 2010.

MI 207 Co-ordinate Geometry (L2 -T1 -P0 -CH3 -CR 3)

Unit-1

Transformation of co-ordinate axes. Pair of straight lines. General equation of second degree and the conditions for representing a pair of straight lines, a parabola, an ellipse, a hyperbola and a circle.

Unit-2

The equation of tangent, condition of tangency of line, pole and polar, centre of a conic, equation of a pair of tangents. Reduction to standard forms, central conics, Equation of the axes and length of the axes.

Unit-3

Polar equation of a conic, tangent and normal, properties. Parabola, parametric co-ordinates, tangent and normal. Ellipse and its conjugate diameters with properties. Hyperbola and its asymptotes. Circle and its parametric form, Orthogonal circle, condition of orthogonality of circles.

Unit-4

Plane, straight line and shortest distance. Change of axes, shift of origin, rotation of axes, Sphere, Cone and Cylinder.

Unit-5

Central Conicoids, Ellipsoid, Hyperboloid of one and two sheets. Generating lines, Diametral planes, tangent lines, plane section of conicoids, director sphere, polar plane, section with a given centre, enveloping cone and cylinder. Confocal conicoids. Reduction of second degree equations.

Text book(s)

1. Jain, P.K. and Ahmad, K. *Text Book of Analytical Geometry of two & three Dimensions*, New Age Publications, 2014.
2. Das, B., *Analytical Geometry and Vector Analysis*, (Orient Book Company, 1995).

Reference book(s)

1. Khan, R.M., *Analytical Geometry & Vector Analysis*, (New Central Book Agency Pvt. Ltd., 2004).
2. Askwith, E. H., *A Course of Pure Geometry*, Michigan Historical Reprint Series (University of Michigan Library, 2005).
3. Askwith, E. H. and Askwith, E., *A Course Of Pure Geometry* (Hard Press, 2007).
4. Spain, B. *Analytical Conics* (Dover, 2007).
5. McCrea, W. H. *Analytical Geometry of Three Dimensions* (Dover, 2006).

MI 208 Linear Algebra (L3 -T1 -P0 -CH4 -CR 4)

Unit-1

Matrix representation of a linear transformation, Annihilating polynomial of a linear transformation; Elementary Canonical forms: diagonalization and triangulation of linear operators.

Unit-2

Primary Decomposition theorem; rational and Jordan forms.

Unit-3

Inner product spaces: inner product, Cauchy-Schwarz inequality, Gram-Schmidt orthogonalization process

Unit-4

Linear functionals and adjoints; self adjoint, normal and unitary operators; orthogonal projections; spectral theorem for normal operators on a finite dimensional vector space.

Unit- 6

Bilinear forms: bilinear, positive and quadratic forms.

Text Book(s) :

1. Halmos, P. R., *Finite dimensional vector spaces*, Springer Verlag, New York, 1987.
2. Hoffman, K. and Kunze, R., *Linear Algebra*, Prentice Hall, 1984.

Reference Book(s) :

1. Halmos, P. R., *Linear Algebra Problem Book*, The Mathematical Association of America (MAA), USA, 1995.
2. Williams, G., *Linear Algebra with Applications*, Jones and Burlet Publishers, 2001.

MI 209 Statics And Dynamics (L2 -T1 -P0 -CH3 -CR 3)

Unit-1

Parallel forces, Couples, Reduction of coplanar forces. Analytical conditions of equilibrium of coplanar forces.

Unit-2

Centre of gravity of a plane area, arc and sector of a curve. C. G. of solids and surface of revolution.

Unit-3

Friction, laws of friction, limiting friction, equilibrium of a particle in rough inclined plane.

Unit-4

Principle of virtual work in two dimensions. Stable and unstable equilibrium.

Unit-5

Velocities and acceleration along radial and transverse directions, along tangential and normal directions.

Unit-6

Rectilinear motion with variable acceleration. Motion under inverse square law and other laws of force.

Unit-7

Simple harmonic motion. Motion in resisting medium. Motion of particles of varying mass. Motion of a projectile.

Unit-8

Central orbit and Kepler's laws of planetary motion.

Unit-9

Moments and products of inertia. Parallel axes theorem, theorem of six constants. Principal axes.

Textbook(s)

1. Whittaker, E.T. and McCrea, W. *A Treatise on the Analytical Dynamics of Particles and Rigid Bodies: with an Introduction to the Problem of Three Bodies* (Cambridge University Press, 1988).
2. Loney, S. L., *Elements of Statics & Dynamics, Part I* (Maxford Books, 2003).
3. Rao, S. *Engineering Mechanics - Statics and Dynamics* (Pearson Education, 2008).

Reference book(s)

1. Spiegel, M. R., *Schaum's Outline of Theory and Problems of Theoretical Mechanics: with an Introduction to Lagrange's Equations and Hamiltonian Theory* (McGraw-Hill, 2007).
2. Ramsey, A. T., *Dynamics*, 2nd Edition (The University Press, 2007).
3. Chorlton, F. *Textbook of Dynamics*, 2nd edition (Horwood, 1983).
4. Loney, S. L., *An Elementary Treatise on the Dynamics of a Particle and of Rigid Bodies*, (Read Books, 2007).

MI 210 Elementary Abstract Algebra (L2 -T1 -P0 -CH3 -CR 3)

Unit-1

Binary operation, semigroup, monoid, group, subgroup, coset, Lagrange's theorem and its applications, index of a subgroup, normal subgroup and quotient group.

Unit-2

Subgroup generated by a set, cyclic subgroups, order of an element, properties of cyclic group.

Unit-3

Permutation, cycle notation, even and odd permutation, order of a permutation, symmetric group and alternating group.

Unit-4

Homomorphism and isomorphism of groups, isomorphism theorems, Cayley's theorem.

Unit-5

Ring, integral domain, field, characteristic of ring, subring and ideal of ring, quotient ring

Unit-6

Homomorphism and isomorphism of rings, isomorphism theorems, ideal generated by a set, principal ideals, prime ideals, maximal ideals.

Textbook(s)

1. Gallian, J. A., *Contemporary Abstract Algebra*, 4th edition (Narosa Publishing house, New Delhi, 2009).
2. Dummit, D. S. & Foote, R. M., *Abstract Algebra*, 3rd edition (John Wiley & Sons, Indian reprint, New Delhi, 2011).
3. Herstein, I. N., *Topics in Algebra*, 2nd edition (John Wiley & Sons, Indian reprint, New Delhi, 2006).

Reference book(s)

1. Fraleigh, J. B. *A First Course in Abstract Algebra*, 7th edition (Pearson Education India, New Delhi, 2008).
2. Lang, S. *Algebra*, 3rd edition (Springer India, New Delhi, 2006).
3. Gopalakrishnan, N. S. *University Algebra* (New Age International (P) Ltd, New Delhi, 2001).

MI 211 Numerical Methods and Integrals (L2-T1 -P0 -CH3 -CR 3)

Unit -1

Finite Difference operators and their operations on functions of a single variable. Existence and uniqueness of interpolating polynomial, Lagrange interpolation, Newton divided difference, forward and backward interpolation, central difference interpolation, Hermite

interpolation and associated error terms. Extrapolation and inverse interpolation. Properties of divided differences.

Unit -2

Roots of algebraic and transcendental equations: bisection method, Newton-Raphson method, secant method and their geometrical interpretation.

Unit -3

Numerical integration: Trapezoidal rule, Simpson's 1/3rd and 3/8th rule of integration. Use and interpretation.

Unit -4

Reduction formulae for integration of the following functions:

Properties of definite integrals.

Unit -5

Rectification, Quadrature, volume and surface area of solids of revolution.

Unit -6

Elementary idea of Improper Integrals, their convergence, Beta and Gamma functions, their properties. Improper integrals involving a parameter.

Textbook(s)

1. Jain, M.K., Iyengar, S.R.K. and Jain R.K. *Numerical methods for Scientific and Engineering Computation*, 5th edition (New Age International (P) Ltd., New Delhi, 2006).
2. Jain, R.K.. and Iyenger, S.R.K. , *Advanced Engineering Mathematics* (CRC Press, 2002).

Reference book(s)

1. Trench, W.F. , *Introduction to real Analysis* (Prentice Hall, 2002).
2. Narayan, S., Mittal, P.K., *Integral Calculus* (S. Chand & Co., 2005).
3. Sastry, S.S. *Introductory methods of Numerical Analysis* (Prentice Hall of India, New Delhi, 1997).
4. Ahmad, K., *Text Book of calculus*, Real World Education Publishers, New Delhi, 2014.

MI 212 Introductory Statistics

(L2 -T1 -P0 -CH3 -CR 3)

Unit-1

Collection of data, methods of collections of primary data, presentation and classification of data.

Unit-2

Discrete and continuous variables, Frequency distributions, Graphical representation, cumulative frequency distribution and ogives.

Unit-3

Measures of location, the arithmetic mean of group data, properties of arithmetic mean, median and mode; other measures of location: quartiles, deciles and percentiles.

Unit-4

Measures of dispersion, Variance and standard deviation of ungrouped and grouped data, properties of standard deviation, moments, skewness and Kurtosis, coefficient of variation.

Unit-5

Correlation and regression: scatter diagram, coefficients of correlation, properties of correlation coefficient, linear regression, fitting of regression line, the method of least squares, curve fitting, properties of regression coefficient, explained and unexplained variation, correlation and regression for grouped data, rank correlation.

Textbook(s)

1. Medhi, J. *Statistical Methods: An introductory Text*, (New Age International (P) Ltd, 2000).
2. Gupta, S.C. and Kapoor, V. K. *Fundamentals of Mathematical Statistics*, (S. Chand & Co., 2007).

Reference book(s)

1. Feller, W. *An Introduction to Probability Theory and Its Applications, Vol. I*, (Wiley, 2005).
2. Uspensky, J.V. *Introduction to Mathematical Probability*, (McGraw Hill, 2005).

MI 213 Set Theory and Mathematical Logic

(L2 -T1 -P0 -CH3 -CR

3)

Unit 1

Statement, truth values, negation, conjunction, disjunction, conditional and biconditional, contrapositive statement.

Unit 2

Set, subset, superset, operations viz. union, intersection, complement etc. of sets; power set, cartesian product.

Unit 3

Equivalence relations, equivalence classes, partition, fundamental theorem of equivalence relation, partial order relation, Poset, chain, upper & lower bounds in poset, greatest & least elements, maximal & minimal elements, supremum & infimum, Zorn's lemma, introduction to lattice theory.

Unit 4

Functions, injection, surjection and bijection; image and pre-image of set under function and inverse mapping, composite mapping.

Unit 5

Peano's axioms, principle of mathematical induction, well ordering principle, axiom of choice.

Unit 6

Finite and infinite sets, countable and uncountable sets, Schroeder Bernstein Theorem, Continuum hypothesis.

Text Book(s):

1. P. R. Halmos, *Naive Set Theory* Springer, 2009.
2. Bartle, R. G. and Sherbert, D. R. *Introduction to Real Analysis*, (John Wiley and Sons, Third (Indian) Edition), 2007.

Reference Book(s):

1. K. Hrbacek and T. Jech, *Introduction to Set Theory*, 3rd edition, CRC press, 1999.

MI 214 Linear Space and Linear Programming

(L2 -T1 -P0 -CH3 -CR

3)

Unit 1

Systems of linear equations, Vector space, Subspace, Direct sum of subspaces, Basis and dimension, Rank of a matrix.

Unit 2

Linear transformation, Linear functional, Matrix representation of a linear transformation, Transition matrix and similar matrices.

Unit 3

Determinant of a linear operator, Eigenvalues and eigenvectors, Characteristic polynomial, Cayley-Hamilton Theorem.

Unit 4

General linear programming problems, Standard form of L.P.P., Graphical method for L.P.P.

Unit 5

Basic solutions, Basic feasible solutions, Convex sets, Extreme point, Convex function, Convex hull of a set, Convex polyhedrons, Convex cone, Polytope.

Unit 6

Supporting hyperplanes and extreme points, Simplex method, Simplex algorithm.

Text Book(s):

1. Halmos, P. R., *Finite dimensional vector spaces*, Springer Verlag, New York, 1987.
2. Hoffman, K. and Kunze, R., *Linear Algebra*, Prentice Hall, 1984.
3. Hadley, G., *Linear Programming*, (Narosa Publishing House, New Delhi, 1987).

Reference book(s)

1. Swaroop, Kanti; Jain, P.K. and Mohan, Man, *Operation Research: An Introduction*, (S. Chand & Company, New Delhi, 1996).
2. Poole, David, *Linear Algebra: A modern introduction*, 3rd edition, Brooks/Cole Cengage learning, 2011.

MI 215 Classical Algebra

(L2 -T1 -P0 -CH3 -CR

3)

Unit-1

Review of basic inequalities, Weierstrass's, Holder's, Jensen's and Minkoski's inequalities.

Unit-2

De Moivre's theorem and its applications. Exponential and trigonometric functions of complex arguments. Gregory's series. Hyperbolic functions.

Unit-3

Polynomials, Euclid's Algorithm, Fundamental theorem of Algebra (statement only), roots and their multiplicity. Descartes rule of sign, Strum's theorem (statement only). Rational roots of polynomials with integral coefficients.

Unit 4:

Relation between the roots and coefficients of a general polynomial equation in one variable, symmetric functions of roots. Transformation of equations, solution of cubic equation by Cardon's method, solution of biquadratic equation by Ferrari's and Euler's methods.

Unit 5:

Symmetric, skew symmetric, Hermitian and skew Hermitian matrices, elementary operations on matrices, elementary matrices and inverse of a matrix. Determinants and its properties. Rank of a matrix, invariance of rank under elementary operations, normal form. System of linear equations and their solutions.

Textbook(s)

1. Mapa, S. K. *Higher Algebra*, Asoke Prakashan, Calcutta, 2006.
2. Hoffman, K. & Kunze, R. *Linear Algebra*, PHI, 2000.

Reference book(s)

2. Das, B.C. *Higher Trigonometry*, U.N. Dhur and Sons Pvt. Ltd., Calcutta, 2012.

MI 216 Elementary Real Analysis

(L2 -T1 -P0 –CH3 -CR3)

Unit-1

Real Numbers, Bounded sets, completeness, Archimedean and density properties of real numbers.

Unit-2

Metric Space, open and closed sets, interior, closure and boundary of sets, Cauchy and convergent sequences, Subsequence, complete metric space, Cantor's Intersection theorem, and continuous functions.

Unit-3

Continuity and differentiability of functions of one variable, their properties, Bolzano's theorem, intermediate value theorem. Rolle's theorem, Mean value theorems (Lagrange's and Cauchy's), Darboux's theorem. Taylor's theorem, expansion of functions by Maclaurin's theorem.

Unit-4

Differentiability of functions of two variables, partial derivatives of higher order, Young's and Schwarz theorems.

Unit-5

Riemann integrals, properties, Mean value theorem, Fundamental theorem of calculus.

Textbook(s)

1. Bartle, R. G. and Sherbert, D. R. *Introduction to Real Analysis*, (John Wiley and Sons, Third (Indian) Edition), 2007.
3. Apostol, T. M. *Mathematical Analysis* (Narosa Publishing House, 1985).

Reference book(s)

1. Goldberg, R. R *Methods of real analysis* (Oxford & IBH, 1970).
2. Simmons, G. F. *Introduction to Topology and Modern Analysis* (Tata McGraw Hill Book Co. Ltd., 1963).
3. Carothers, N. L. *Real Analysis*, Cambridge University Press, Indian Edition, 2009.

MI 301 Computer Programming⁺

(L3 -T1 -P0 -CH4 -CR 4)

Unit-1

Revision of fundamentals of C: Data types in C, variables in C, input output statements, constant declaration, arithmetic operators in C, arithmetic expressions, assignment statements, arithmetic assignment operators, increment and decrement operators, type conversions, operator precedence. for loop, while loop, do...while loop, if statement, if...else statement, switch statement, conditional operators. The break statement, the continue statement, the go-to statement.

Unit-2

Arrays: Arrays, declaration of one dimensional arrays, two dimensional arrays.

Structures and Unions: User defined data types, structures, array of structures, unions, enumerated data type.

Unit-3

Searching and Sorting: Bubble sort, selection sort, insertion sort, linear search and binary search.

Unit-4

Function in C: Simple functions, passing arguments to functions with return value, call by value, call by reference, overloaded functions, inline functions, default arguments.

Unit-5

Pointers: Introduction; accessing address of a variable; pointer declaration, initialization, accessing variable through pointer, chain of pointers; pointer expressions, increment and scale factor. Pointers and Arrays. Array of pointers. Pointers as function arguments.

Unit-6

Files in C: Defining and opening a file, closing a file. Input/Output operations on files.

Unit-7

Dynamic Memory Allocation and Linked list: Dynamic memory allocation, Malloc, Calloc, Free, Realloc. Concepts of linked list, advantages of linked list, types of linked list. Creating a linked list.

Textbook(s)

1. Rajaraman, V. *Fundamentals of Computers* (Prentice Hall of India, New Delhi, 2002).
2. Balaguruswamy, E. *Programming in ANSI C* (Tata McGraw-Hill, 2004).

Reference book(s)

1. Kanetkar, Y. P. *Let us C* (BPB Publication, 2001).
 2. Venkateshmurthy, M. G. *Programming Techniques through C* (Pearson Education, 2002).
- ⁺Practical unit for the course MI 301 to be done in the course MI 309 Computer Laboratory.

MI 302 Numerical Analysis⁺

(L3 -T1 -P0 –CH4 -CR 4)

Unit-1

Definition and sources of errors, Propagation of errors, Error analysis, Sensitivity and conditioning, Stability and accuracy, Floating-point arithmetic and rounding errors.

Unit-2

Overview of interpolation. Spline interpolation, B-splines. Special emphasis on cubic spline. Curve fitting.

Unit-3

Numerical solution of algebraic and transcendental equations: Methods based on first and second degree equations, rate of convergence. Theory of one point iterative methods and its convergence analysis, multipoint iterative methods. Numerical evaluation of multiple roots.

Unit-4

Solution of system of linear algebraic equations: Direct methods- Gauss elimination, pivoting and Gauss-Jordan methods. Iterative methods- Jacobi, Gauss-Seidel, Successive over-relaxation (SOR).

Numerical solution of non-linear simultaneous equations, Newton's method, General iteration method.

Unit-5

Overview of Newton-Cotes method. Composite integration. Double integration. Gaussian quadrature, one point, two point and three point formulae. Orthogonal polynomials, Gauss-Legendre, Gauss-Hermite and Gauss-Laguerre quadrature formulae. Romberg integration.

Unit-6

Solution of ordinary differential equations. Picard method, Euler method, backward Euler method, modified Euler method, Runge-kutta class of methods.

Unit-7

Solving problems with C codes.

Textbook(s)

1. Atkinson, K.E. *Introduction to Numerical Analysis* (John Wiley, 1989)
2. Jain, M.K., Iyengar, S.R.K. and Jain R.K. *Numerical methods for Scientific and Engineering Computation*, 5th edition (New Age International (P) Ltd., New Delhi, 2006).

Reference book(s)

1. Sastry, S.S. *Introductory methods of Numerical Analysis* (Prentice Hall of India, New Delhi, 1977)
2. Hilderbrand, F. B. *Introduction to Numerical Analysis* (Tata McGraw Hill, New Delhi, 1974).
3. Conte, S. D., Boor, Carl de. *Elementary Numerical Analysis - An Algorithmic Approach*, 3rd Edition (McGraw Hill, 1980).

+ *Practical unit for the course MI 302 to be done in the course MI 310 Computer Laboratory.*

MI 303 Real Analysis**(L3 -T1 -P0 -CH4 -CR4)****Unit-1**

Metric space, Completeness, Uniform continuity, compactness and connectedness.

Unit-2

Riemann-Stieltjes integrals, properties, Mean value theorem, Fundamental theorem of calculus.

Unit-3

Sequences and series of functions, uniform convergence and its relation to continuity, differentiation and integration.

Unit-4

Functions of several variables, Derivative on a open subset of \mathbb{R}^n , Jacobians, chain rule, directional derivative, derivative of higher order, Taylor's theorem. Inverse function theorem, Implicit function theorem, extremum problem with constraints, Lagrange's method of multipliers.

Textbook(s)

1. Apostol, T. M. *Mathematical Analysis* (Narosa Publishing House, 1985).
2. Rudin, W. *Principles of Mathematical Analysis* (McGraw Hill, 1982).

Reference book(s)

1. Goldberg, R. R *Methods of real analysis* (Oxford & IBH, 1970).
2. Simmons, G. F. *Introduction to Topology and Modern Analysis* (Tata McGraw Hill Book Co. Ltd., 1963).
3. Carothers, N. L. *Real Analysis*, Cambridge University Press, Indian Edition, 2009.

MI 304 Topology**(L3 -T1 -P0 -CH4 -CR 4)****Unit-1**

Topological spaces, basis and sub-basis, Subspaces, closure, interior and boundary.

Unit-2

Continuity, open functions, homeomorphisms, embeddings, strong and weak topologies.

Unit-3

Quotient and product spaces.

Unit-4

Countability axioms, separability, Lindelof spaces. Separation axioms (T_0 , T_1 , T_2 , T_3 , T_4), regularity, complete regularity, normality.

Unit-5

Compactness, local compactness, Tychonoff's product theorem, compactification.

Unit-6

Connectedness, local and path connectedness, components, products of connected spaces.

Textbook(s)

1. Kelley, J. L. *General Topology* (Graduate Texts in Mathematics, Vol. 27), (Springer, Berlin, 1991).
2. Munkres, J. R. *Topology : A first course* (2/e), (Prentice-Hall, 2000 or (1/e) Prentice Hall of India, New Delhi, 1983).

Reference book(s)

1. Joshi, K. D. *Topology*, (Wiley-Eastern, New Delhi, 1988).

MI 305 Abstract Algebra (L3 -T1 -P0 -CH4 -CR 4)

Unit-1

Groups, cyclic groups, Lagrange's theorem, homomorphism of groups, automorphisms of groups, permutation groups, Cayley's theorem.

Unit-2

External direct product of groups, properties of external direct products, internal direct products, fundamental theorem of finite abelian groups and applications.

Unit-3

Group action, properties of group action, class equation of finite groups, Sylow's theorems, applications of Sylow's theorems.

Unit-4

Subnormal, normal series, and solvable groups, composition series, nilpotent groups, Jordan-Holder theorem.

Unit-5

Word, reduced word, free group, rank of a free group, fundamental theorem of free groups, presentation of groups.

Unit-6

Polynomial rings, rings of formal power series, embedding theorems, field of fractions.

Unit-7

Factorization theory in integral domains, PID, UFD and euclidean domains.

Unit-8

Field extensions, splitting field, finite fields, structure of finite fields, separable and inseparable extension of fields, elements of Galois theory.

Textbook(s):

1. Gallian, J. A., *Contemporary Abstract Algebra*, 4th edition (Narosa Publishing house, New Delhi, 2009).
2. Dummit, D. S. & Foote, R. M., *Abstract Algebra*, 3rd edition (John Wiley & Sons, Indian reprint, New Delhi, 2011).
3. Herstein, I. N., *Topics in Algebra*, 2nd edition (John Wiley & Sons, Indian reprint, New Delhi, 2006).

Reference book(s):

1. Fraleigh, J. B. *A First Course in Abstract Algebra*, 7th edition (Pearson Education India, New Delhi, 2008).
2. Lang, S. *Algebra*, 3rd edition (Springer India, New Delhi, 2006).

MI 306 Functional Analysis

(L3 -T1 -P0 -CH4 -CR4)

Unit-1

Recap pre-requisite topics: Sets and relations, Linear spaces and linear maps, Metric spaces and continuous functions.

Unit-2

Introduce normed linear spaces with examples. Properties of nls, Riesz lemma, particular study of finite dimensional normed linear spaces, Discuss the interplay between linear structure and metric structure.

Unit-3

Define stronger, weaker and equivalent norms. Continuity and boundedness of linear maps, introduce complete normed linear spaces with examples. Function spaces and operator norm, bounded linear functional. Definition of Schauder basis. Dual spaces.

Unit-4

Hahn Banach separation and extension theorems. Applications of HBT.

Unit-5

Refer to the Ascoli-Arzelà theorem and the definitions of uniform continuity, uniform boundedness, equicontinuity of a family of functions. Uniform boundedness theorem.

Unit-6

Closed graph theorem, open mapping theorem, bounded inverse theorem. Examples and applications of above theorems.

Unit-7

Inner product and Hilbert spaces, Bessel's inequality, Riesz-Fisher theorem, orthonormal basis. Fourier expansion and relation to orthonormal basis, Parseval formula, Separable Hilbert spaces.

Unit-8

Approximations, projection theorem, Riesz representation theorem. Hilbert adjoint operator, normal, self adjoint and unitary operators.

Textbook(s)

1. Limaye B. V. *Functional Analysis*, (Wiley Eastern Ltd., New Delhi, 1989).
2. Kreyszig E. *Introductory Functional Analysis with Applications*, (John Wiley and Sons, New York, 1978).

Reference book(s)

3. MacCluer B. *Elementary Functional Analysis*, (GTM 253, AMS, 2009).
4. Siddiqi, A. H., Ahmad K and Manchanda P., *Introduction to Functional Analysis with Applications*, Real World Education Publishers, New Delhi, 2014.

MI 307 Elementary Number Theory (L3 -T1 -P0 -CH4 -CR 4)

Unit-1

Divisibility, greatest common divisor, least common multiple, Euclidean Algorithm.

Unit-2

Prime numbers, factorization in prime numbers, fundamental theorem of arithmetic.

Unit-3

Divisor functions, perfect numbers, Mersenne numbers, Fermat numbers.

Unit-4

Greatest integer function (Gauss function), Mobius function, Euler function.

Unit-5

Concept of congruences and its elementary properties, congruences in one unknown, complete residue system, reduced residue system.

Unit-6

Diophantine equations, linear Diophantine equations, Pythagoras equation, sum of two squares.

Unit-7

Quadratic residues and congruences of second degree in one unknown, Legendre symbol, Jacobi symbol, congruences of second degree with prime modulus and with composite modulus.

Unit-8

Primitive roots and indices, order, necessary and sufficient condition for the existence of primitive roots, construction of reduced residue system.

Unit-9

Continued fractions, simple continued fractions, approximation of irrational numbers by continued fractions, solution of Pell's equation.

Textbook(s)

1. Burton, D. M. *Elementary Number Theory*, 6th Edition (Tata McGraw-Hill, New Delhi, 2007).
2. Niven, I. and Zuckerman, H. *An Introduction to the Theory of Numbers*, 5th Edition (Wiley Eastern, New Delhi, 2000).

Reference book(s)

4. Hsiung, Y. *Elementary Theory of Numbers* (World Scientific, 1992; First Indian Reprint, Allied Publishers Limited, 1995).

MI 308 Theory of Ordinary Differential Equations

(L3 -T1 -P0 -CH4 -CR 4)

Unit -1

Review of fundamentals of ODEs, Some basic mathematical models, direction fields, classification of differential equation, Solutions of some differential equation. 1st order non-linear differential equation.

Existence and Uniqueness problem, Gronwall's inequality, Peano existence theorem, Picard existence and uniqueness theorem, interval of definition.

Unit -2

Second order linear differential equation, General solution for homogeneous equation, superposition of solutions, Methods of solution for non-homogeneous problem: undetermined coefficients, variation of parameters.

Unit -3

Series Solutions for ODE, Types of singularity, Solution at an Ordinary Point, Solution at a Singular Point.

Unit -4

nth order differential equation, system of equation, homogeneous system of equation, fundamental matrix, Abel-Liouville formula, System of non-homogeneous equations, Stability of linear systems.

Unit -5

Theory of two point BVP, Greens function, Greens matrix, properties of greens functions, Adjoint and self adjoint BVP.

Unit -6

Strum-Liouvilles problem, Orthogonal functions, eigen values & eigen functions, Completeness of the Eigen functions.

Unit -7

Orthogonal trajectory of a system of curves on a surface solution of pfaffian differential equations in three variables.

Textbook(s)

3. Farlow, S. J. *An Introduction to Differential Equations and Their Applications* (McGraw-Hill International Editions, 1994).

MI 309 Computer Laboratory+ CR2)

(L0-T0-P2 -CH4 -

⁺ *Practical unit for the course MI 301 Computer Programming.*

MI 310 Computer Laboratory+

(L0 -T0 -P2 -CH4 -CR2)

⁺ *Practical unit for the course MI 302 Numerical Analysis+.*

MI 312 Elementary Complex Analysis (L2 -T1 -P0 –CH3 -CR 3) Unit 1

Complex numbers as ordered pairs, Geometric representation of complex numbers, Riemann sphere and Stereographic Projection.

Unit 2

Continuity and differentiability of complex functions, Analytic functions, Cauchy-Riemann equations, harmonic functions.

Unit 3

Elementary analytic functions (exponential function, trigonometric functions and logarithm function) and their mapping properties.

Unit 4

Complex integration, Cauchy-Goursat theorem, Cauchy's integral formula.

Unit 5

Cauchy's Integral formula for derivatives, Cauchy's inequality and Liouville's theorem, the fundamental theorem of algebra, Maximum-modulus theorem, Morera's theorem.

Textbook(s)

1. Churchill R. V. and Brown, J. W. *Complex variables and applications*, McGraw-Hill International edition, 2006.
2. Mathews, J. H. and Howell, R. W., *Complex Analysis for Mathematics and Engineering*, 3rd Edition, Narosa, 1998.
3. Ponnusamy, Foundations of Complex Analysis. 2nd Edition , Narosa Book Distributors Pvt Ltd , 2008.

Reference Book(s)

1. Saff, E. B. and Snider, A. D., *Fundamentals of Complex Analysis with applications to Engineering and Science*, 3rd Edition, Pearson, 2003 (ISBN 978-81-317-2019-6)

MI 401 Classical Mechanics

(L3 -T1 -P0 -CH4 -CR4)

Unit-1

Momentum and kinetic energy, motion about a fixed point, Euler's equation, General equation of motion for a single particle and a system of N number of particles, General Solution.

Unit-2

Motion of a heavy sphere in a cylinder and a cone, motion under no force, Torque, Poinsot's representation of motion.

Unit-3

Lagrange's equation of motion for holonomic systems, Velocity dependent potential, conservation theorem and symmetric properties, Lagrange's multiplier for holonomic and nonholonomic systems, Lagrange's equation for impulsive motion.

Unit-4

Hamiltonian of a dynamical system, Hamilton's canonical equation of motion, Cyclic coordinate, The Routhian, Conservation of energy and momentum.

Unit-5

Lagrange's method for small oscillation, Normal modes, Equations and examples.

Unit-6

Integral invariants of Poincaré, Lagrange's and Poisson's brackets and their properties, Equation of Motion and conserved quantities using Poisson's brackets, Infinitesimal contact transformation.

Unit-7

Euler's equation of calculus of variations, Brachistochrone problem, extremes under constraints, Hamilton's principle for conservative and non-conservative system, Holonomic and non-holonomic system.

Unit-8

Derivation of Lagrange's and Hamilton's equations from Hamilton's principle of least action, Hamilton Jacobi theory, Hamilton's Principal Function.

Textbook(s)

1. Goldstein, H. *Classical Mechanics*, 2nd edition (Narosa Publishing House, New Delhi, 2000).
2. Rana, N. C. & Joag, P. C. *Classical Mechanics* (Tata-McGraw Hill, 1991).

4. Landau, L. & Lifshitz, E.M. *Mechanics: Course of Theoretical Physics, Vol. 1*, 3rd edition (Pergamon Press, 1976).

MI 402 Advanced Analysis

(L2 -T1 -P0 -CH3 -CR3)

Unit-1

Functions of several variables, Derivative on a open subset of \mathbb{R}^n , Chain rule, partial derivative, derivative of higher order, Taylor's theorem.

Unit-2

Inverse function theorem, Implicit function theorem, Jacobians, Extermum problem with constraints, Lagrange's method of multipliers.

Unit-3

Differentiation under integrals, Partition of Unity, Differential forms, Stoke's theorem.

Unit-4

Lebesgue differentiation theorem, Lebesgue set, Complex measures, L^p Space.

Unit-5

Convex functions, Jensen's inequality, Holder and Minkowski's inequalities, Convergence and completeness, Approximation in L^p , Convergence in measure, integration of convex functions.

Unit-6

Total Variation, absolute continuity, consequences of Radon-Nikodym theorem, Bounded linear functional on L^p Space, Riesz representation theorem.

Unit-7

Fourier transforms, the inversion formula, the Plancherel theorem, the Banach algebra L^1 .

Textbook(s)

1. Royden, H. L. *Real Analysis*, 3rd Edition, (Macmillan Publishing Company, New York, 1988, Reprint 2003).
2. Rudin, W. *Principle of Mathematical Analysis*, Third Edition, (McGraw Hill Book Company, 2003).
3. Rana, I. K. *An Introduction to Measure and Integration*, 2nd edition, (Narosa Publishing House India, 2000).

Reference book(s)

1. Rudin, W. *Real and Complex Analysis*, Third Edition, (McGraw Hill Book Company, 2003).

MI 403 Measure Theory

(L2 -T1 -P0 -CH3 -CR 3)

Unit-1

Algebra of sets, Borel sets, Extended real numbers.

Unit-2

Lebesgue measure on the Real Line: Lebesgue outer measure, Properties of outer measure, Measurable sets and Lebesgue measure, Non-measurable sets.

Unit-3

Measurable functions, Borel measurability, Simple functions, Littlewood's principles.

Unit-4

Lebesgue Integral of simple functions, Lebesgue integral of bounded functions, Bounded convergence theorem, Comparison of Riemann and Lebesgue integral.

Unit-5

Integral of non-negative functions, Fatou's Lemma, Monotone convergence theorem, Lebesgue general integral, Lebesgue dominated convergence theorem.

Unit-6

L_p Space, Minkowski and Holder inequalities, Convergence and completeness, Bounded linear functionals on L_p Space.

Textbook(s)

1. Royden, H. L. *Real Analysis*, 3rd Edition (Macmillan Publishing Company, New York, 1988) (Reprint 2003).

(OR)

Royden, H.L. and Fitzpatrick, P. M., *Real Analysis*, 4th Edition, Pearson, 2010.

2. Barra, G. De. *Measure Theory and Integration* (New Age International(P) Ltd, Publishers, New Delhi 2003).

Reference book(s)

3. Jain, P. K. and Gupta, V. P. *Lebesgue Measure and Integration*, New Age International (P) Limited, New Delhi, 1986.

4. Cohen D. L., *Measure Theory*, Birkhauser, 1980.

MI 405 Graph Theory

(L3 -T1 -P0 -CH4 -CR 4)

Unit-1

Graphs: History, The Konigsberg Bridge Problem, Basic Ideas: Definitions of Graph, Sub Graph, Spanning and Induced Subgraph (with diagrams), Degree and Incidence, Multi and Pseudo Graphs, Diagraph. Isomorphism and Homeomorphism of graphs.

Operations on Graphs: Union, Intersection and Ring-Sum of graphs, addition and removal of Edges and Vertices.

Unit-2

Connectivity: connectivity, walk, path, circuit, cut-vertex, cut-set, Non-Separable Graph, Components of a Graph, complete graph. Edge and Vertex Connectivity and related theorems.

Unit-3

Trees: Characterizations of trees, Theorems on tree, Forest, Rooted Tree, Binary Tree, Spanning Tree, Fundamental Cycles (to construct spanning Tree).

Unit-4

Traversability: Definition of Eulerian graph, Properties of Eulerian Graphs: Necessary and sufficient conditions, Definition of Hamiltonian graph, Properties of Hamiltonian Graphs: Necessary and sufficient conditions .

Structure-based Connectivity and bipartite graph and its necessary and sufficient condition.

Some Applications: The shortest path problem, The chinese postman problem and Travelling Salesman Problem.

Unit-5

Coverings and Colourings: Covering, Independence and Domination, Colouring Vertices (Chromatic Number, 4, 5 and 6 – Colourable Graphs, k-Colourable Graph), Colouring edges, Chromatic Polynomials.

Unit-6

Planarity: The Utilities Problem, Plane and Planar Graph, Planar Graph Representation, Planarity Detection (Kuratowski's theorem), Duality, Thickness and Crossing Numbers.

Unit-7

Diagraphs: Connectivity, Traversibility, Directed Trees, More Diagraph Matrices, The principle of Directional Duality, Tournaments.

Unit-8

Matrices: The Adjacency Matrix, The Incidence Matrix, The Cycle Matrix, The Cut-set Matrix, The Path Matrix.

Textbook(s)

1. Foulds, L. R. *Graph Theory Applications* (Narosa Publishing House, New Delhi, 1992).
2. Wilson, Robin J. *Introduction to Graph Theory* (Longman, England, 1996).

Reference book(s)

1. Deo, N. *Graph Theory with Applications to Engineering and Computer Science* (Prentice Hall of India, 1974).

MI 406 Probability Theory

(L3 -T1 -P0 -CH4 -CR 4)

Unit-1

Measurable space, Measure and its properties, finite and sigma-finite measures, Axiomatic definition of Probability, Measurable functions , definition of Random Variable.

Unit-2

Measure induced by a measurable function, definition of Probability distribution and distribution function, properties of distribution function and classification of distributions.

Unit-3

Some basic theorems Integration theory(integration of measurable functions w. r. t. an arbitrary measure): Fatou's lemma , Monotone Convergence theorem, Dominated convergence Theorem. Definition of Mathematical Expectation of a random variable and its properties. Moments and moment inequalities.

Unit-4

Convergence of a sequence of random variables (Weak convergence or convergence in probability, almost sure convergence and convergence in Law). Borel-Cantelli-lemma, Weak and Strong law of large numbers, Central limit theorem.

Textbook(s)

1. Feller, W. *An Introduction to Probability Theory and its Applications*, Vol. II (Wiley,1966).
2. Chow, Y. and Teicher, H. *Probability Theory , Independence, Interchangeability, Martingales*,; 3rd Edition (Springer, 1997).

Reference book(s)

1. Ash, R. B. *Probability and Measure Theory, Second Edition* (Harcourt/Academic Press, 2000).

MI 407 Mathematical Software

(L1 -T0 -P2 -CH2 -CR2)

Unit -1

Basic operations through Matlab, Input through keyboard and its illustration, Flow Control statements.

Unit -2

Iterative Method for Solving Non-linear Equation, Numerical Integration, Numerical Solution of 1st order IVP.

Unit -3

Numerical Differentiation and BVP.

Unit -4

Introduction to Mathematica, Symbolic Computation.

Textbook(s)

1. Pratap, R. *Getting Started with MATLAB 7: A Quick Introduction for Scientists and Engineers* (Oxford University Press, USA , 2005)
2. Otto, S.R. & Denier, J. P. *An Introduction to Programming and Numerical Methods in MATLAB* (Springer, 2009).
3. Torrence, Bruce F. & . Torrence, Eve A. *The student's introduction to Mathematica*, 2nd edition (Cambridge University Press, 2009).

2. Wolfram, S. *The Mathematica Book* (Wolfram Media, 2008).
3. Gray, T. W. & Glynn, G. *The Beginners Guide to Mathematica*, Version 4, Addison-(Wesley, 2008).

MI 408 Complex Analysis

(L3-T1-P0-CH-CR 4)

Unit-1

Convergence of sequences and series, Absolute and uniform convergence of power series, Integration and differentiation of power series, uniqueness of series representations.

Unit-2

Taylor series, Zeros of analytic functions, Limit points of Zeros, Singularities and their classification, Behaviour of the function in a neighbourhood of isolated singularities, Laurent's series, Residues, Cauchy Residue Theorem.

Unit-3

Evaluation of improper integrals and definite integrals involving sines and cosines, integration through a branch cut.

Unit-4

The winding number, Logarithmic residues and Rouche's theorem, the Argument Principle.

Unit-5

Mapping by elementary functions, Linear fractional transformations, cross ratios, mappings of the half planes and circles, conformal mapping, Statement of Riemann Mapping Theorem.

Unit-6

Schwarz Reflection Principle, Analytic continuation, Riemann Surfaces.

Textbook(s)

1. Mathews, J. H. and Howell, R. W., *Complex Analysis for Mathematics and Engineering*, 3rd Edition, Narosa, 1998.
2. Conway, J. B. *Functions of One Complex Variable*, 2nd Edition (Narosa Publishing House, India, 1994).

Reference book(s)

1. Ahlfors, L. V. *Complex Analysis*, 3rd Edition (McGraw-Hill Publishing Company, New Delhi, 1979).
2. Priestly, H.A. *Introduction to Complex Analysis*, 2nd Edition, Cambridge, 2008.
3. Gamelin, T. W., *Complex Analysis*, UTM, Springer, 2003.
4. Narasimhan, R. and Nievergelt, Y., *Complex Analysis in One Variable*, 2nd Edition, Springer (India), New Delhi, 2004.

MI 409 Probability

(L2 -T1 -P0 -CH3 -CR 3)

Unit-1

Elements of probability theory, classical definition of probability, axiomatic approach to probability, probability of a simple event, probability of composite event, addition rule,

multiplication rule: conditional probability, Bayes' formula, Discrete sample space, Discrete random variable, expected value of a random variable.

Unit-2

Probability Distributions: Binomial distribution, Properties of Binomial Distribution, Stirling approximation, Poisson Distribution, Properties of Poisson distribution.

Unit-3

Elements of Sampling theory: sampling with and without replacement. Sampling distribution of the sample mean, sampling distribution of proportion, standard error.

Unit-4

Tests of significance, Null hypothesis and hypothesis testing; Chi-square distribution and tests related. Non parametric tests, 't' tests – paired and student 't' tests, 'F' test, critical difference at 0.01 and at 0.05.

Textbook(s)

1. Medhi, J. *Statistical Methods: An introductory Text* (New Age International (P) Ltd, 2000).

Reference book(s)

1. Feller, W. *An Introduction to Probability Theory and Its Applications*, Vol. I (Wiley, 2005).

MI 410 Mathematical Methods

(L3 -T1 -P0 -CH4 -CR4)

Unit-1

Calculus of variations: Linear functionals, minimal functional theorem, general variation of a functional, Euler-Lagrange equation. Variational problems with fixed boundaries. Sufficient conditions for extremum.

Unit-2

Integral equations: Linear integral equations of the first and second kind of Fredholm and Volterra type, solution by successive substitutions and successive approximations, solution of equations with separable kernels. Fredholm alternative.

Unit-3

Special functions: General solution of Bessel equation, Recurrence relations, Orthogonal sets of Bessel functions, Modified Bessel functions, Applications. General solution of Legendre equation, Legendre polynomials, Associated Legendre polynomials, Rodrigues formula, Orthogonality of Legendre polynomials, Application.

Unit-4

Integral transform: Fourier Series, Generalized Fourier series, Fourier Cosine series, Fourier Sine series, Fourier integrals. Fourier transform, Laplace transform. Solution of differential equation by Laplace and Fourier transform methods. Concept and calculation of Green's function, Approximate Green's function, Green's function method for differential equations.

Textbook(s)

1. Watson G. N. *A Treatise on the Theory of Bessel Functions* (Cambridge University Press, 1944).
2. Brown J. W. and Churchill, R. *Fourier Series and Boundary Value Problems* (Mc Graw Hill, 1993).
3. Roach, G. F. *Green's Functions* (Cambridge University Press, 1995).

Reference book(s)

1. Gupta, A, S. *Calculus of Variations with Applications* (Prentice Hall of India, New Delhi 2003).
2. Mikhlin, S. G. *Integral equations* (The MacMillan Company, New York, 1964).

MI 411 Partial Differential Equations**(L3 -T1 -P0 -CH4 -CR 4)****Unit-1**

Origin of first order partial differential equations (PDE). Solutions of linear equations of first order of the form $Pp + Qq = R$. Integral surfaces passing through a given curve, Surfaces orthogonal to a given system of surfaces.

Unit-2

Nonlinear partial differential equation of the first order, Cauchy's method of characteristics, Compatible systems of first order equations, Lagrange's, Charpit's and Jacobi's method. Application of first order PDE.

Unit-3

Linear PDE with constant coefficients, reducible and irreducible equations. Different methods of solution.

Unit-4

Second order PDE with variable coefficients. Characteristic curves of second order PDE. Reduction to canonical forms. Solutions of PDE of second order by the method of separation of variables.

Unit-5

Solutions of PDE of second order by the use of Riemann's method. Adjoint operators. Solutions of PDE of second order by the method of integral transforms.

Unit-6

Elliptic differential equations. Occurrence and detailed study of the Laplace and the Poisson equation. Maximum principle and applications, Green's functions and properties.

Unit-7

Parabolic differential equations. Occurrence and detailed study of the heat equation. Maximum principle. Existence and Uniqueness of solutions of IVPs for heat conduction equation. Green's function for heat equation.

Unit-8

Hyperbolic differential equations. Occurrence and detailed study of the wave equation. Solution of three dimensional wave equation. Method of d'Alembert and Duhamel's principle. Solutions of equations in bounded domains and uniqueness of solutions.

Text Book(s):

1. Sneddon, I.N. *Partial Differential Equations* (McGraw-Hill, 1957)
2. Rao, K.S. *Introduction to partial differential equations* (Prentice Hall of India, New Delhi, 2006)

Reference Book(s):

1. John, F. *Partial Differential Equations*, 3rd edition (Narosa, 1979)
2. Haberman, R. *Elementary Applied Partial Differential equations*, (Prentice-Hall, New Jersey, 1987)
3. Willams, W.E. *Partial Differential Equations* (Oxford University Press, 1980)
4. Strauss, W.A. *Partial Differential Equations: An Introduction* (John Wiley, 1992)
5. McOwen, R. *Partial Differential Equations Methods and Applications*, Prentice Hall, New Jersey, 1996.

Unit-1

Applications of Simplex Technique, Solution of Simultaneous Equations, Inverse of a Matrix By Simplex Method, LPP having no Feasible Solution, LPP having Unbounded Solution, LPP Having more than one Optimal Solution, Problem of Degeneracy..

Unit-2

Certain Advance Topics of Linear Programming, LPP with Unrestricted Variables, Bounded variable technique, Upper bound Algorithm.

Unit-3

Duality in linear programming, comparison of solutions of primal and its dual. Development of computer software for the solution of LPP using simplex.

Unit-4

Formulation of LP problem in revised simplex form. Computational procedure (algorithms). Advantage of revised simplex over simplex.

Unit-5

Introduction to dual simplex method along with its limitations. Development of computer software for the solution of LPP using Dual Simplex algorithm.

Unit-6

Importance of Integer programming problems. Gomory's All IPP technique. How to Construct Gomory's constraint.

Unit-7

Game theory: Two-person zero-sum games, maximum criterion, dominance rules, mixed strategies, mini-max theorem, solutions of 2x2 and 2xm games.

Text Book(s):

1. Hadley, G., *Linear Programming*, (Narosa Publishing House, New Delhi, 1987).
2. Kanti Swaroop, P.K. Jain and Man Mohan, *Operation Research: An Introduction*, (S. Chand & Company, New Delhi, 1996).
3. Sharma, S.D., *Operations Research and Statistical Analysis*, (Kedar Nath Ram Nath & Co., India, 1989).

Reference Books:

3. Luenberger, D.G., *Introduction to Linear and Nonlinear Programming*, (Addison Wesley, Massachusetts, 1973).
4. Bazarrar, M.S. and C.M. Shetty , *Nonlinear Programming Theory and Algorithms*, (John Wiley & Sons, New York, 1979).

ELECTIVES :**MI 537 Stochastic Processes- I****(L3 -T1 -P0 -CH4 -CR****4)****Unit-1**

Preliminaries of probability distributions, Laplace transforms, Laplace transforms of probability distributions of random variables, Simple random walk.

Unit-2

Stationary processes, Martingales (discrete).

Unit-3

Markov chains, Higher transition probability and its determinations, Sequence of chain-dependent trials, Classifications of States and chains.

Unit-4

Poisson Process and its properties.

Textbook(s)

1. Feller, W. *An Introduction to Probability Theory and its Applications*, II, (Wiley, 1998).
2. Medhi, J. *Stochastic Processes*, (Wiley Eastern Ltd., New Delhi, 1994).

Reference book(s)

1. Bhattacharyya, R. and Waymire, E. C. *Stochastic processes with applications*, (SIAM, 1990).

MI 538 Theory of Partial Differential Equations CR4)

(L3 -T1 -P0 -CH4 -

Unit -1

Overview of PDE. Laplace equation, mean-value formulas, strong maximum principle. Heat and wave equations, uniqueness by energy methods.

Unit -2

Theory of distributions: test functions, distributions, generalized derivatives, Sobolev Spaces, imbedding theorems, Rellich-Kondrasov theorem, trace theory.

Unit -3

Elliptic Boundary Value Problems: abstract variational problems, Lax-Milgram Lemma, weak solutions, regularity result, maximum principles, eigen value problems.

Unit -4

Semigroup Theory and Applications: exponential map, C_0 -semigroups, Hille-Yosida and Lumer-Phillips theorems, applications to heat and wave equations.

Textbook(s)

1. Kesavan, S., *Topics in Functional Analysis* (New Age International (P) Ltd. 1989, reprint 2003)
2. Evans, L.C., *Partial Differential Equations* (AMS, Providence, 1998).

Reference book(s)

1. John, F. , *Partial Differential Equations*, 3rd ed., (Narosa Publ. Co., New Delhi, 1979).

3. Jost, J. , *Partial Differential Equations* (Springer-Verlag New York, 2002).
4. Renardy, M. and Rogers, R.C. , *An Introduction to Partial Differential Equations*, 2nd ed., (Springer Verlag International Edition, New York, 2004).

MI 539 Advanced Numerical Analysis 4)

(L3 -T1 -P0 -CH -CR

Unit-1

Finite Difference method: Explicit and Implicit schemes, consistency, stability and convergence, Lax equivalence theorem. Numerical solutions of elliptic, parabolic and hyperbolic partial differential equations.

Unit-2

Optimization: Problem formulation, single variable optimization, multi variable optimization.

Unit-3

Krylov subspace methods, Conjugate-Gradient (CG), BiConjugate-Gradient (BiCG), BiCG Stabilised (BiCGStab), Generalised Minimum Residual (GMRES). Preconditioning Techniques, parallel implementations.

Unit-4

Approximate method of solution: Galerkin method, properties of Galerkin approximations, Petrov-Galerkin method, Generalised Galerkin method.

Unit-5

Review of Sobolev spaces. Weak solution of elliptic boundary value problem, regularity of weak solutions, maximum principle.

Finite Element method: Definition and properties. Element types triangular, rectangular, quadrilateral. Application of finite element method for second order problems, one and two dimensional problems. Isoparametric finite element, non-conformal finite element. Mixed finite element.

Textbook(s)

1. Watkins, D. S. *Fundamental of Matrix Computations*, 2nd edition (Wiley-Interscience, 2002).
2. Smith, G. D. *Numerical Solution of Partial Differential Equations: Finite Difference Methods*, 3rd edition (Oxford University Press, 1986).
3. Reddy, J. N. *An Introduction to the Finite Element Method*, 3rd Edition (McGraw Hill India, 2006).

Reference book(s)

1. Trefethen, L. N and Bau, David *Numerical Linear Algebra* (SIAM, 1997).
2. Hoffman, Joe D. *Numerical Methods for Engineers and Scientist*, 2nd edition (Mc-Graw Hill 2004).
3. Ciarlet, P. G. *The Finite Element Method for Elliptic Problems* (North Holland, 1978).
4. Johnson, C. *Numerical Solution of Partial Differential Equations by the Finite Element Method* (Cambridge University Press, 1987).

MI 540 Mathematical Methods in Finance

(L3 -T1 -P0 -CH3 -CR4)

Unit-1

An introduction to the basic concepts of financial markets. Various terms associated with Options. Different types of options. Payoff functions. Introduction to Martingale and the concept of fair price. (Proofs and technical details of stochastic calculus are beyond the scope of this course).

Unit-2

First principles, viz. no arbitrage, continuous compounding of risk free interest rates. Present value. Call-put parity. Bounds for present value of option price. Effect of expiry date and strike price on option valuation. Introduction to the concept of risk neutrality.

Unit-3

Discrete models in finance. Self financing strategy. Viable and complete market. Martingale based option pricing. CRR model and exact formulae for present value of European options based on a single asset.

Unit-4

Continuous time asset price model. ARCH / GARCH models for dynamically estimating volatility. Fitting these models using R. Exotic Options. Approximation of expected option pay-off by Monte Carlo Simulation. Monte- Carlo Integration.

Unit-5

Introduction to Brownian Motion Process and Geometric Brownian motion process and Black-Scholes Model. Solution of a linear SDE.

Textbook(s)

1. Higham, D. J. *An Introduction to Financial Option Valuation* (Cambridge University Press, 2004).

Reference book(s)

1. Glasserman, P. *Monte Carlo Methods in Financial Engineering* (Springer, 2000).

MI 541 Fluid Mechanics

(L3 -T1 -P0 -CH3 -CR

4)

Unit-1

Lagrangian and Eulerian methods, Velocity and acceleration, Particle path, Stream lines, Streak lines velocity potential, Steady and unsteady flows.

Unit-2

Conservation of mass and momentum, Equation of continuity. Equations of motion of a fluid, Pressure at a point in fluid at rest, Pressure at a point in a moving fluid, Euler's equation of motion, Bernoulli's equation.

Unit-3

Total energy, Circulation, Boundary surface, Impulsive motion. Irrotational motion, Potential flow, Green's theorem, application of Green's theorem in fluid mechanics, Kinetic energy of liquid, Uniqueness theorem. Vorticity vector,

Unit-4

Motion in two dimensions, Singularities of flow, Source, Sink, Doublets, Rectilinear vortices. Complex variable method for two-dimensional problems, Complex potentials for various singularities, Circle theorem, Blasius theorem, Theory of images and its applications to various singularities.

Unit-5

Three dimensional flow, Irrotational motion, Weiss's theorem and its applications.

Unit-6

Viscous flow, Vorticity dynamics, Vorticity equation, Reynolds number, Stress and strain analysis, Navier-Stokes equation, Boundary layer Equations.

Textbook(s)

1. Munson, B.R., Young, D.F. & Okiishi, T.H. *Fundamentals of Fluid Mechanics*, 6th ed., (John Wiley & Sons, 2009).
2. White, Frank M. *Fluid Mechanics*, (Mc-Graw Hill, 2005).

Reference book(s)

1. Batchelor, G. K. *An Introduction to Fluid Dynamics* (Cambridge University P, 1993).
2. Panton, R. L. *Incompressible Flow* (John Wiley & Sons, 2005).
3. Schlichting, H. *Boundary Layer Theory* (Mc-Graw Hill, 2005).
4. Chorlton, F. *Textbook of Fluid Mechanics* (C. B. S. Publishers, Delhi, 1985).
5. Besant, W. H & Ramsey, A. *A Treatise on Hydro-mechanics* (ELBS, 1990).
6. Milne, L. M –T. *Theoretical Hydrodynamics* (Macmillan & Co., 1990).
7. Yuan, S. W. *Foundations of Fluid Mechanics* (PHI, 1976).

MI 542 Electrodynamics

(L3 -T1 -P0 -CH3 -CR

4)

Unit-1

Electrostatic force on charges, Coulombs Law, Electrostatic Field and Potential, Conservative force, Divergence and Curl of Electrostatic field, Gauss Law, Poisson and Laplace Equation.

Unit-2

Boundary conditions on Electrostatic field, Green's Function, Fourier series and Fourier Transform, Solution Electrostatic Poisson and Laplace Equation, Electrostatic Mirror Image.

Unit-3

Electrostatics in Media, Free and bound charges, Polarisation Vector, Permittivity and Susceptibility of media, Displacement Vector. Clausius-Mosotti Equation.

Unit-4

Moving charges and current, Conductors and Insulators, Current density, Magnetic effects of current, Bios-Savart Law, Magnetic field around an infinitely long current carrying wire, an infinite sheet and a solenoid, Divergence and Curl of Magnetic field, Amperes circuital Law. Megnetic Vector Potential.

Unit-5

Time varying electric and magnetic fields, Electromagnetic Induction, Faraday law, Lenz's law, Self and Mutual Inductance.

Unit-6

Maxwell Equations in free space and material media, Wave equation, Electromagnetic Waves, Plane wave solution, Transverse waves, Poynting Vector, Maxwell equations in conducting media, Attenuation of Electric and Magnetic fields.

Unit-7

Reflection, Refraction and Polarisation of Electromagnetic Plane waves, Brewster Angle, Fresnel's Equations.

Unit-8

Special Theory of Relativity, Lorentz Transformation and consequences, Minkowski Diagram, Four dimensional spacetime continuum, Four vector formulation of Maxwell Equations, Electromagnetic field Tensor.

Textbook(s)

1. Griffiths, D. J. *Introduction to Electrodynamics* (Pearson Education Limited, 2012).
2. Jackson, J. D. *Classical Electrodynamics* (Wiley Eastern Ltd., 1989).

Reference book(s)

1. Reitz, J. R., Milford, F. J. & Christy, R. W. *Foundations of Electromagnetic theory* (Narosa Publishing House, 1988).
2. Miah, M. A. W. *Fundamentals of Electrodynamics* (Tata McGraw Hill, 1986).
3. Laud, B. B. *Electromagnetics* (Wiley Eastern Ltd., 1990).

MI 543 Relativity

(L3 -T1 -P0 -CH3 -CR

4)

Unit-1

Postulates of Special Theory of Relativity, Lorentz Transformation and consequences, Minkowski Diagram, Four dimensional spacetime continuum, Four vector formulation, Elementary properties of Tensors.

Unit-2

Rules of Combination of Tensors, Tensor Algebra, Inner and Outer Product Quotient Rule, Metric tensor and Conjugate Metric Tensors, Raising and lowering properties, Christoffel symbols of first and second kind, Transformation properties of Christoffel symbols.

Unit-3

Tensor Analysis, Covariant Derivative of Tensors, Gradient, Divergence and Curl of Tensor, Geodesic Equation, Riemannian Tensor, Ricci Tensor, Bianchi Identities, Einstein Tensor.

Unit-4

Transition of Special to General Theory of Relativity, Principle of covariance, Equivalence Principle and consequences, Stress Energy Tensor, Einstein Field Equations and Newtonian limit.

Unit-5

Spherically symmetric solution to Einstein Field Equation in free space and in matter, Schwarzschild line element. Schwarzschild Black Holes.

Unit-6

Equation of Planetary Orbits, Crucial tests of General Theory of Relativity, Advance of Perihelion, Gravitational bending of light and Gravitational Redshift.

Unit-7

Cosmology: Large scale structure of Universe, Galactic Densities and the darkness of the Night Sky, Galactic Number Counts, Olber's paradox, Cosmological principles, Relativistic Universe and models.

Unit-8

Einstein and de-Sitter models of static universe, Dynamical Universe, Comoving time, Red Shifts and Horizons, Friedmann-Robertson-Walker line element, Open and Closed Universe, Hubbles law, Early Universe.

Textbook(s)

1. Narlikar, J.V. *An Introduction to Cosmology*, 3rd edition (Cambridge University Press, 2002).
2. Landau and Lifshitz, *Classical Theory of Fields* (Pergamon Press, 1975).

Reference book(s)

1. Dirac, P. A. M. *General Theory of Relativity* (Prentice Hall of India (reprinted), 2001).
2. Weinberg, S. *Gravitation and Cosmology* (John Wiley & Sons, 1972).
3. Kenyon, I. R. *General Relativity* (Oxford University Press, 1991).

MI 544 Operations Research

(L3 -T1 -P0 -CH3 -CR

4)

Unit-1

Definition and scope of operational research, different types of models.

Unit-2

Replacement model and Sequencing theory. Inventory problems and their analytical structure.

Unit-3

Economic lot size models with uniform rate of demand, with different rate of demand in different cycle.

Unit-4

Simple deterministic and stochastic model of inventory control; basic characteristics of queueing system.

Unit-5

Steady state solution of Markovian queueing model; M/M/1, M/M/1 with limited waiting space.

Unit-6

M/M/C, M/M/C with limited waiting space.

Textbook(s)

1. Sharma, J. K. *Operations Research: Theory and Applications* (Macmillan, 1997).

Reference book(s)

1. Taha, Humdy A. *Operations Research - An Introduction* (Prentice Hall of India, New Delhi, 1999).

MI 545 Elliptic Curves

(L3 -T1 -P0 -CH4 -CH

4)

Prerequisite: MI 305

Unit-1

Projective Geometry: Homogeneous coordinates, projective plane, curve in projective plane, intersection of projective curves, Bezout's theorem.

Unit-2

Introduction to algebraic curves, singular and non-singular curves, geometry of cubic curves, elliptic curves, Weierstrass normal form of elliptic curves, Mordell-Weil group law on elliptic curve, explicit formulas for group law, Isogeny.

Unit-3

Points on elliptic curves of order two and three, points of finite order, Nagell-Lutz theorem and its applications.

Unit-4

Group of rational points on elliptic curve, height function, Mordell's theorem, rank of elliptic curves, examples.

Unit-5

Elliptic curves over finite fields, Frobenius endomorphism, trace of Frobenius and number of points on elliptic curves.

Unit-6

Real and complex points on elliptic curves, periods of elliptic curves, lattice associated to elliptic curves.

Unit-7

Complex multiplication: Abelian extension of \mathbb{Q} , algebraic points on cubic curves, Galois representation and complex multiplication.

Textbook(s)

1. Silverman, J.H. & Tate, J. *Rational Points On Elliptic Curves* (Springer-Verlag Indian Reprint, New Delhi 2010).
2. Washington, L. C. *Elliptic Curves: Number Theory and Cryptography* (CRC Press, USA, 2006).
- 3.

Reference book(s)

1. Husemoller, D., *Elliptic Curves*, GTM vol. 111 (Springer-Verlag, New York, 2005).
2. McKean, M. & Moll, V. *Elliptic Curves*, (Cambridge University Press, 1999).

MI 546 Algebraic Number Theory

(L3 -T1 -P0 -CH4 -CH 4)

Prerequisite: MI 305

Unit-1

Algebraic numbers and number fields, Discriminants, Norms and Trace.

Unit-2

Algebraic Integers, rings of integers, Integral Bases, Problems for quadratic and cubic cases.

Unit-3

Arithmetic of Number Fields: Quadratic Fields, Cyclotomic polynomials and fields.

Unit-4

Units in Number Rings, Dirichlet's Unit Theorem.

Unit-5

Ideal Theory: Norms of Ideals, fractional ideals.

Unit-6

Ideal Classes-The Class Group, Class Numbers of Quadratic Fields and Cyclotomic fields.

Textbook(s)

1. Millin, R. A. *Algebraic Number Theory* (CRTC Press,1999)
2. Stewart, I. N. & Tall, D. *Algebraic Number Theory and Fermat's Last Theorem*, 3rd Edition (A K Peters Ltd., 2002).
3. Esmonde, J. and Murty, M. R. *Problems in Algebraic Number Theory*, GTM Vol. 190 (Springer-Verlag, 2004).

Reference book(s)

1. Neukirch, J. *Algebraic Number Theory* (Springer-Verlag, 2002).

MI 547 Numerical Linear Algebra

(L3 -T1 -P0 -CH4 -CH

4)

Unit -1

Fundamentals. Linear systems, LU decompositions, Gaussian elimination with partial pivoting, Banded systems, Positive definite systems, Cholesky decomposition. Vector and matrix norms,

Unit -2

Perturbation theory of linear systems, Condition numbers, Estimating condition numbers, IEEE floating point arithmetic, Analysis of roundoff errors. Gram-Schmidt orthonormal process, Orthogonal matrices, Householder transformation, Givens rotations, QR factorization, Roundoff error analysis of orthogonal matrices, Stability of QR factorization. Solution of linear least squares problems, Normal equations, Singular Value Decomposition(SVD), Polar decomposition, Moore-Penrose inverse.

Unit -3

Rank deficient least squares problems, Sensitivity analysis of least-squares problems. Review of eigenvalues and canonical forms of matrices, Sensitivity of eigenvalues and eigenvectors, Reduction to Hessenberg and tridiagonal forms, Power and inverse power methods, Rayleigh quotient iteration, Explicit and implicit QR algorithms for symmetric and non-symmetric matrices, Implementation of implicit QR algorithm.

Unit -4

Computing the SVD, Sensitivity analysis of singular values and singular vectors. Overview of iterative methods: Jacobi, Gauss-Seidel and successive overrelaxation methods, Krylov subspace method, The Arnoldi and the Lanczos iterations.

Textbook(s)

1. Trefethen L. N. and Bau, David. *Numerical Linear Algebra* (SIAM, 1997).
2. Watkins, D. S. *Fundamentals of Matrix Computation* (Wiley, 1991).

Reference book(s)

1. Golub, G. H. and Loan, C.F.Van. *Matrix Computation* (John Hopkins U. Press, Baltimore, 1996).
2. Stewart, G. W. *Introduction to Matrix Computations* (Academic Press, 1973).
3. Demmel, J.W. *Applied numerical linear algebra* (SIAM, Philadelphia, 1997).

MI 548 Mathematical Logic

(L3 -T1 -P0 -CH4 -CH

4)

Unit-1

Zermelo-Fraenkel set theory, Ordinals and well-ordering, Axiom of choice cardinal Arithmetic.

Unit-2

Boolean algebra and propositional calculus. First order theories, validity, consistency, completeness.

Unit-3

Skolem-Lowenheim Theorem, compactness theorem, categoricity, Decidability; Godel's numbering. Godel's incompleteness theorems.

Unit-4

Propositional calculus, Truth on algebraic systems. The calculus of predicates. Model theory.

Textbook(s)

1. Cori, Rene and Lascar, Daniel., *Mathematical logic* (Oxford, 2001).

Reference book(s)

1. Halmos, P. R. *Naïve Set Theory* (Springer-Verlag, New York, 1974).

MI 550 Discrete Mathematics**(L3 -T1 -P0 -CH4 -CH****4)****Unit-1**

Set Theory: Sets and classes, Relations and Functions, Equivalence relations and Equivalence classes, Principle of mathematical induction, Recursive definitions.

Unit-2

Poset: Definitions and properties of poset, Chains and well-ordered sets.

Unit-3

Axiom of choice, Cardinal and ordinal numbers, Cantor's lemma, Set theoretic paradoxes.

Unit-4

Combinatorics: Permutation and combinations, Principles of addition and multiplication, Arrangements, Multinomial theorem, Partitions and allocations, Pigeonhole principle, Inclusion-exclusion principle. Generating functions, Recurrence relations.

Textbook(s)

1. Lovasz, L., Pelikan, J., Vesztergombi K. *Discrete Mathematics* (Springer, 2003).

2. Balakrishnan, V. K. *Introductory Discrete Mathematics* (Dover, 1996).

Reference book(s)

1. Johnsonbaugh, R. *Discrete Mathematics* (Prentice Hall, 2008).

2. Grimaldi, R. *Discrete and Combinatorial Mathematics*, 5th Edition (Pearson Education, 2003).

MI 551 Introduction to Category Theory**(L3 -T1 -P0 -CH4 -CR****4)**

Prerequisites: MI 208, 305, 304.

Unit-1

Category, Functors and Natural Transformations: basic introductions and examples. The notion of universality.

Unit-2

Representability, and its connections with universality, Yoneda's Lemma and its consequences.

Limits, co-limits and their examples.

Unit-3

Algebras, internal algebras, matrices, internal relations, internal equivalence relations, internal groupoids, internal categories.

Unit-4

Adjoints and their examples, Characterising algebras through Beck's Monadicity Theorem.

Unit-5

A second visit to adjoints: Freyds Adjoint Functor Theorem and its applications to adjoints in algebra and topology.

Unit-6

Monoidal Categories, Introduction to Enriched Categories, Introduction to Abelian Categories.

Textbook(s)

1. Mac Lane, S. *Categories for the Working Mathematician*, 2nd ed. (Springer Verlag, New York, 1997).
2. Kelly, G. M. *Basic Concepts of Enriched Category Theory*, volume 64 (London Mathematical Society Lecture Notes, Cambridge University Press, 1982).

Reference Books:

1. Mac Lane, S. & Birkhoff, G. *Algebra*, 3rd ed. (Chelsea Pub. Co., New York, 1988).
2. Borceux, F. *Hand Book of Categorical Algebra-I: Basic Category Theory* (Cambridge University Press, Cambridge, 1994).

MI 552 Operator Theory I

(L3 -T1 -P0 -CH4

-CR 4)

Unit-1

Uniform, strong and weak convergences.

Unit-2

Compact linear operators on normed linear spaces; the ideal of compact operators; the separability of the Range and spectral properties of a compact operator; operator equations involving compact operators.

Unit-3

Bounded operators on Hilbert spaces; adjoint operators; normal, unitary and self adjoint operators; spectral properties of bounded self adjoint linear operators.

Unit-4

positive operators and their square root; projection operators; spectral representation of a bounded self adjoint linear operator.

Unit-5

Spectral measure.

Unit-6

Spectral theorem for bounded normal operators.

Textbook(s)

1. Conway, J. B. *A course in Operator Theory* (AMS., GSM Vol. 21, 1999).
2. Kreyszig, E. *Introductory functional analysis with applications* (John Wiley and Sons, 1978).

Reference book(s)

1. Halmos, P. R. *Introduction to Hilbert spaces and theory of spectral multiplicity* (Chelsea Publishing Co., New York, 1957).
2. Abramovich, Y. A. and Aliprantis, C. D. *An Invitation to Operator Theory* (AMS, GSM Vol. 50, 2002).

MI 554 Advanced Algebra I

(L3 -T1 -P0 -CH4 -CR

4)

Prerequisite: MI 305

Unit-1

Ideals in commutative rings, operations on ideals, extension and contraction of ideals, Nilradical and Jacobson radicals, prime spectrum of commutative rings.

Unit-2

Localization of commutative rings and their basic properties.

Unit-3

Noetherian and Artinian rings, examples.

Unit-4

Integral extensions, Dedekind domains.

Unit-5

Hilbert's Nullstellensatz, Noether's normalisation, valuation rings.

Unit-6

Modules: Elementary properties of modules, Quotient modules, module homomorphisms, Isomorphism theorems, Generation of modules, Direct sum of modules, finitely generated modules, free modules.

Unit-7

Tensor product of modules and properties, Exact sequences, projective and injective modules.

Unit-8

Modules over Principal Ideal Domain.

Textbook(s)

1. McDonalds, I. G. & Atiyah, M. F. *Introduction to Commutative Algebra* (Levant Books, Kolkata, 2007).
2. Dummit, D. S. & Foote, R. M. *Abstract Algebra* (Wiley-India, New Delhi, 2011).

Reference book(s)

1. Sharp, R. Y. *Step in Commutative Algebra* (Cambridge University Press, Cambridge, 2000).
2. Lang, S. *Algebra* (Springer, GTM Vol. 211, New Delhi, 2006).

MI 556 Quantum Mechanics I

(L3 -T1 -P0 -CH4 -CR

4)

Unit-1

Inadequacy of classical mechanics, Specific Heat at low temperature, Dulong and Petit law, Amagat's experiment, Photoelectric effect, Properties of electromagnetic waves, Davisson and Garmer experiment.

Unit-2

Frank and Hertz Experiment, G.P. Thomson experiment, Blackbody radiation, Wein's and Rayleigh-Jean's law, plack's quantum idea, de Broglie waves.

Unit-3

Heisenberg uncertainty principle, wave packet, phase velocity and group velocity. Time independent and time dependent schrodinger equation, interpretation of wave function.

Unit-4

Particle constrained in one dimension, in three dimension, potential well, rectangular potential barrier, theory of alpha decay.

Unit-5

Schrodinger equations for Simple Harmonic Oscillator, Solution by the method of separation of variables, Quantisation of energy levels, Hermite polynomials.

Unit-6

Hydrogen atoms and orbitals, Lauguerre polynomials, Quantum Theory of Angular Momentum, Quantisation of angular momentum, Ladder operators, Spherical Harmonics.

Unit-7

Addition of angular momenta, Pauli spin matrices, Space quantisation, spin quantisation, Addition of orbital and spin angular momentum, Clebsch-Gordon coefficient.

Unit-8

Formal Structure of Quantum Mechanics, Postulates, Linear vector space, basis, quantum mechanical operators, Dirac bra and ket notation, unitary transformation, Matrix Mechanics.

Textbook(s)

1. Schiff, L. I. *Quantum Mechanics* (McGraw Hill, 1986).
2. Enderson, E. E. *Introduction to Modern Physics and Quantum Mechanics* (Macmillan India Ltd, 1979).
3. Ghatak, A. K. and Loknathan, S. *Quantum Mechanics* (Macmillan India Ltd, 1982).

Reference book(s)

1. Methews, P.M. and Venkatesan, K. *Quantum Mechanics* (Tata McGraw Hill, 1990).
2. Merzbacher, *Quantum Mechanics* (John Wiley & Sons, NY, 1970).
3. Dirac, P. A. M. *The Principles of Quantum Mechanics* (Oxford University Press, 1958).

MI 557 Mathematical Modelling-I

(L3 -T1 -P0 -CH4 -CR

4)

Unit-1

Background of Mathematical Modelling, need and Techniques. Classification and its characteristics.

Unit-2

Autonomous System, Nonautonomous System, Sylvester criterion.

Unit-3

Liapunov's Theorems, Stability by Liapunov's Direct Method. Krasovskii's method.

Unit-4

Construction of Liapunov function for linear system with constant coefficients.

Unit-5

Test for stability based on first approximations, Two-dimensional nonlinear system and linearization technique.

Unit-6

Limit sets and Limit cycles, Extent of Asymptotic Stability, Lienard Equation.

Unit-7

Stability, Perturbation Theorems, Poincare's Linearization Theorem, Bifurcation and Chaos.

Textbook(s)

1. Glendinning, P. *Stability, Instability and Chaos* (Cambridge University Press, 1994).
2. Yoshizawa, T. *The Stability Theory by Liapunov's Second Method* (Mathematical Society of Japan, Tokyo, 1966).

Reference book(s)

1. Hahn, W., *Stability of Motion* (Springer Verlag, Berlin, 1967).
2. Salle J. La and Lefschetz, S. *Stability by Liapunov's Direct Mehtod* (Academic Press, New York, 1961).

MI 558 General Theory of Relativity**(L3 -T1 -P0 -CH4 -CR****4)****Unit-1**

Elementary properties of Tensors. Rules of Combination of Tensors, Tensor Algebra, Inner and Outer Product Quotient Rule, Riemannian space, Metric tensor and Conjugate Metric Tensors, Raising and lowering properties.

Unit-2

Parallel Transport, Christoffel symbols of first and second kind, Transformation properties of Christoffel symbols, Covariant Derivative of Tensors, Gradient, Divergence and Curl of Tensors.

Unit-3

Geodesic Equation, Riemannian Tensor, Ricci Tensor, Bianchi Identities, Scalar Curvature, Einstein Tensor and their properties, Differential Manifolds.

Unit-4

Transition of Special to General Theory of Relativity, Principle of covariance, Equivalence Principle and consequences, Stress Energy Tensor, Einstein Field Equations and Newtonian limit.

Unit-5

Spherically symmetric solution to Einstein Field Equation in free space and in matter, Schwarzschild line element. Schwarzschild Singularity, Eddington-Finkelstein co-ordinates, Kruskal-Szekeres co-ordinates.

Unit-6

Linearised theory of gravity, weak field limit, Hilbert gauge and wave solution to Einstein Field Equations, Gravitational Waves, Polarisation properties, emission of gravitational waves.

Unit-7

Crucial tests of General Theory of Relativity, Advance of Perihelion, Gravitational bending of light, Gravitational Redshift, Shapiro delay.

Unit-8

Large scale structure of Universe, Cosmological principles, Einstein and de-Sitter models of static universe, Dynamical Universe, Comoving time, Red Shifts and Horizons, Friedmann-Robertson-Walker line element, Hubbles law, Elements of Quasi-Steady State Cosmology.

Textbook(s)

1. Narlikar, J.V. *An Introduction to Cosmology*, 3rd edition (Cambridge University Press, 2002).
2. Adler, R., Bazin M. & Schiffer, M. *Introduction to General Relativity* (McGraw Hill, 1975).

Reference book(s)

1. Landau and Lifshitz *Classical Theory of Fields* (Pergamon Press, 1975).
2. Dirac, P. A. M. *General Theory of Relativity* (Prentice Hall of India (reprinted), 2001).
3. Weinberg, S. *Gravitation and Cosmology* (John Wiley & Sons, 1972).
4. Kenyon, I. R. *General Relativity* (Oxford University Press, 1991).
5. Misner, C., Thorne, K.S. & Wheeler, J.A. *Gravitation* (W.H. Freeman, 1973).

MI 560 Sampling Techniques-I**(L3 -T1 -P0 -CH4 -CR****4)****Unit-1**

Introduction of Sampling techniques and methods of estimation.

Unit-2

Various sampling techniques: Simple random sampling with and without replacement, Stratified random sampling, optimal allocations, allocation problem, Systematic sampling, Two stage sampling, Multistage sampling, Multiphase sampling, Sequential sampling.

Unit-3

Methods of estimation: Ratio method of estimation, Regression method of estimation, Related estimation problems.

Unit-4

A survey description of sample surveys conducted in India.

Textbook(s)

1. Cochran, W. G. *Sampling Technique* (Wiley Eastern, New Delhi, 1977).
2. Sukhatme, P. V., Sukhatme, B. V., Sukhatme S., and Ashok, C. *Sampling Theory of Survey with Applications* (Iowa State University Press, Ames, Iowa, 1984).
3. Murthy, M. N. *Sampling Theory & Methods*, 2nd edition (Stat. Pub. Soc., Calcutta., 1977).

Reference book(s)

1. Mukhopadhyay, P. *Theory and Methods of Survey Sampling* (Prentice-Hall of India Pvt. Ltd, New Delhi, 1998).
2. Hansen, M. H., Hurwitz, H.N. and Madow, W. G. *Sample Survey Methods and Theory*, Vols. I and II, (Wiley, N.Y., 1953).
3. Lish, L. *Survey Sampling* (Wiley, N.Y., 1965).
4. Jensen, R. J. *Statistical Survey Techniques* (Wiley, N.Y., 1978).
5. Des Raj and Chandhok, P., *Sample Survey Theory* (Narosa Publishing House, New Dehi, 1998).

MI 562 Statistical Quality Control**(L3 -T1 -P0 -CH4 -CR****4)****Unit-1**

Statistical control of processes, Concept of quality and meaning of control, Various control charts.

Unit-2

Properties of control charts, Special procedures in process control.

Unit-3

Estimating process average, single, double and sequential sampling plans.

Unit-4

Natural tolerance limits and specification limits, OC and ASN functions, AOQL and ATI.

Unit-5

Acceptance sampling by variables, tolerance limits.

Textbook(s)

1. Hansen, B. L., and Ghare, P. M. *Quality control and application* (PHI, N.J., 1993).
2. Guttman, I., Wilks S. S., and Hunter, J. J. *Introductory Engineering Statistics* (John Wiley, N.J., 1982).
3. Montgomery, D. C. *Introduction to Statistical Quality Control* (John Wiley, N.Y., 1985).

Reference book(s)

1. Hansen, B. L. *Quality Control: Theory and Applications* (Englewood Cliffs, N. J.:Prentice Hall, 1963).
2. Grant. E. L. and Leavenworth, R.S. *Statistical Quality Control*, 5th Ed., N. Y. (McGraw Hill, 1980).
3. Hines,W.W. and Montgomery, D. C. *Probability and Statistics in Engineering and Statistics*, 2nd Ed., N.Y. (John Wiley, 1980).

MI 564 Multivariate Analysis-I**(L3 -T1 -P0 -CH4 -CR****4)****Unit-1**

Bivariate Moment Generating Functions, Characteristics Functions, Bivariate Normal Distributions and its Properties.

Unit-2

Multivariate Normal Distributions, Singular and non-singular Multivariate Distributions.

Unit-3

Marginal and Conditional Distributions, Distributions of Linear forms, and Quadratic forms

Unit-4

Multiple Regression and Correlation, Correlation coefficient of a Bivariate sample.

Unit-5

The distribution when the population coefficient is non-zero, Cochran's Theorem

Unit-6

Tests of hypotheses and confidence region, the asymptotic distribution of a sample correlation coefficient.

Unit-7

Fisher's z, Partial correlation coefficient, Multiple Logistic Regression.

Unit-8

Multinomial Distributions, Multivariate Multinomial Distributions.

Textbook(s)

1. Anderson, T. W. *An Introduction to Multivariate Analysis*, 2nd edition (Wiley, 1984).
2. Khirsagar, A. M. *Multivariate Analysis* (Marcell Dekker, New York).
3. Krishnaiah, P. R. (eds), *Some recent developments on real multivariate distributions, Development in Statistics*, Vol. I (Academic Press, New York, 1978).
4. Johnson N. L., and Kotz, S. *Continuous Multivariate Distributions* (John Wiley, New York).

Reference book(s)

1. Kendall, M. G. *Multivariate Analysis* (NY, Hamer Press, 1975).
2. Maxwell, A. E. *Multivariate Analysis in Behavioural Research* (Chapman & Hall, London 1977).
3. Chatterjee, S. and Price, B. *Regression Analysis by Examples* (John Wiley, NY, 1977).
4. Johnson, R. A. and Wichern, D. W. *Applied Multivariate Statistical Analysis*, 3rd edition (PHI, 1998).
5. Johnson, N.L., Kotz, S. and Balakrishnan, N. *Discrete Multivariate Distributions* (Wiley,N.Y., 1997).
6. Johnson, N. L., Kotz, S., and Kemp, A. W. *Univariate Discrete Distributions*, 2nd \edition (Wiley, 1993).

MI 565 Fuzzy Sets and Applications-I

(L3 -T1 -P0 -CH4 -CR

4)

Unit-1

Fuzzy sets - basic definitions, α -level sets, convex fuzzy sets.

Unit-2

Basic operations on fuzzy sets, types of fuzzy sets

Unit-3

Cartesian products, algebraic products, bounded sum and difference, t-norms and t-conorms. Fuzzy sets in contrast of probability theory.

Unit-4

The extension principle - the Zadeh's extension principle, image and inverse image of fuzzy sets.

Unit-5

Fuzzy numbers, elements of fuzzy arithmetic.

Unit-6

Fuzzy relations and fuzzy graphs, composition of fuzzy relations, min-max composition and its properties, fuzzy equivalence relations, fuzzy relational equations, fuzzy graphs.

Textbook(s)

1. Klir, G. J. and Yuan, B. *Fuzzy Sets and Fuzzy Logic : Theory and Applications*, (Prentice Hall of India, New Delhi, 1997)

Reference book(s)

1. Zimmermann, H. J. *Fuzzy set theory and its Applications* (Allied publishers Ltd., New Delhi, 1991).

MI 566 Fourier Analysis

(L3 -T1 -P0 -CH4 -CR

4)

Prerequisite: MI 306 Functional Analysis

Unit 1:

Fourier series: Orthogonal systems, Trigonometric system, Orthogonal polynomials, Genesis of the Fourier series.

Unit 2:

Convergence of Fourier series: Fejer mean and Cesaro mean, Convergence of the Fourier series, Fejer theorem, Uniqueness and convergence, Approximate identity, Fourier series of continuous and smooth functions.

Unit 3:

L^2 theory of Fourier series: Inversion formula and the Parseval identity.

Unit 4:

Fourier transforms, the Schwartz space, Plancherel formula, Maximal function and distributions, Tempered distribution, Fourier analysis and filters. Bessel functions.

Unit 5

Fourier analysis and complex function theory: Paley Wiener's theorem, Tauberian theorem, Dirichlet problem, Classical Hardy spaces F and M . Reisz theorem.

Textbook(s)

1. Katznelson, Y. *An Introduction to Harmonic Analysis* (Dover, New York, 1976).

Reference book(s)

1. Dym, I.H. and Mc Kean, H.P. *Fourier Series and Integrals* (Academic Press, 1985).
2. Folland G. B. *Fourier Analysis and Applications* (Brooks/Cole Mathematics Series, 1972).

3. Korner, T. *Fourier Analysis* (Cambridge, 1989).
4. Rudin, W. *Functional Analysis* (Tata Mc. Graw Hill, 1974).
5. Elias M. S. and Shakarchi, R. *Fourier Analysis An Introduction* (Princeton University Press, Princeton, 2004).

MI 567 Continuum Mechanics

(L3 -T1 -P0 -CH4 -CR

4)

Unit-1

Analysis of Strain: Lagrangian and Eulerian finite strain tensor. Geometrical interpretation of the components of strain. Strain quadric of Cauchy. Principal strains and invariants. General infinitesimal deformation. Saint-Venant's equations of compatibility.

Unit-2

Analysis of stress: Stress tensor. Equations of equilibrium. Transformation of co-ordinates. Stress quadric of Cauchy. Principal stress and invariants. Maximum normal and shear stresses. Two dimensional problems-Plane stress. Generalised plane stress. Airy stress function.

Unit-3

Fundamental laws of continuum mechanics: Continuity equation, Equation of motion, Moment of momentum principle, Second law of thermodynamics. The Clausius-Duhem inequality.

Unit-4

Equations of Elasticity. Generalised Hooke's law. Homogeneous isotropic media, Strain energy function and its connection with Hooke's law. Four basic elastic constants-Young's modulus, Poisson's ratio, modulus of rigidity, bulk modulus. Uniqueness of solution. Saint-Venant's principle.

Unit-5

Fluids: Classification, constitutive equations, energy equation, dissipation of energy.

Textbook(s)

1. Mase, G.E. *Schaum's Outline of Continuum Mechanics (Schaum's Outline series)* (Mc-Graw Hill, 1990).
2. Chatterjee, R. *Mathematical Theory of Continuum Mechanics* (Narosa, 1999).

Reference book(s)

1. Truesdell, C. *The elements of continuum Mechanics* (Springer-Verlag, 2000).

MI 568 Theory of Distribution and Sobolev Spaces

(L3 -T1 -P0 -CH4 -CR4)

Unit -1

Test Function and distribution: Definition, operations with distributions, convolution of distributions, Fourier transform of tempered distributions.

Unit -2

Sobolev spaces: generalized derivatives, Definition and properties, extension theorem, imbedding and completeness theorem, fractional order Sobolev spaces, trace theory.

Unit -3

Application to Elliptic Problems: Weak solution of elliptic boundary value problem (BVP), regularity of weak solutions, maximum principle, eigenvalue problems, fixed point theorems and their application in semi-linear elliptic BVP.

Textbook(s)

1. Adams, R.A. *Sobolev Spaces* (Academic Press, 1975).

2. Kesavan, S. *Topics in Functional Analysis and Applications* (Wiley Eastern Ltd., New Delhi, 1989).
3. Strihartz, Robert S. *A guide to Distribution Theory and Fourier Transforms, Studies in Advanced Mathematics* (CRC Press, USA, 1994).

Reference book(s)

1. Oden, J.T. and Reddy, J.N. *An Introduction to Mathematical Theory of Finite Elements* (Wiley Interscience, 1976).
2. Brennan, K. E. and Scott., R. *The Mathematical Theory of Finite Element Methods* (Springer-Verlag, Berlin, 1994).
3. Lieb, Elliot H. and Loss, M. *Analysis* (Narosa Publishing House, New Delhi, 1997).
4. Rudin, W. *Functional Analysis* (Tata Mc-Graw Hill, 1974).

MI 572 Operator Theory II

(L3 -T1 -P0 -CH4 -CR

4)

Unit-1

Functional calculus and spectral mapping theorem for analytic functions; Riesz decomposition theorem.

Unit-2

Numerical range of an operator; spectral radius.

Unit-3

Subnormal and hyponormal operators.

Unit-4

Partial isometries; polar decomposition.

Unit-5

Unbounded linear operators and their Hilbert adjoint operators; symmetric and self adjoint linear operators; spectral properties of self adjoint linear operators; closed linear operators; closable operators and their closures, multiplication operator and differentiation operator.

Unit-6

Spectral representation of unitary and self adjoint linear operators.

Textbook(s)

1. Conway, J. B. *A course in Operator Theory* (AMS., GSM Vol. 21, 1999).
2. Kreyszig, E. *Introductory functional analysis with applications* (John Wiley and Sons, 1978).
3. Conway, J. B. *A course in Functional Analysis* (Springer Verlag, New York, 1985).
- 4.

Reference book(s)

1. Halmos, P. R. *Introduction to Hilbert spaces and theory of spectral multiplicity* (Chelsea Publishing Co., New York, 1957).
2. Abramovich, Y. A. and Aliprantis, C. D. *An Invitation to Operator Theory* (AMS., GSM Vol. 50, 2002).

MI 573 Analytic Number Theory

(L3-T1-P0-CH4-CR4)

Unit-1

Arithmetical functions and Dirichlet multiplication, averages of arithmetical functions.

Unit-2

Elementary theorems on the distribution of primes, the prime number theorem, Chebyshev's functions and their relations.

Unit-3

Dirichlet's theorem for primes of the form $4n-1$ and $4n+1$, distribution of primes in arithmetic progressions.

Unit-4

Quadratic residues and quadratic reciprocity law, applications of the reciprocity law, Gauss sums.

Unit-5

Dirichlet series, Euler products, Riemann zeta function and Dirichlet L -functions.

Unit-6

Introduction to partitions, geometric representation, generating functions, Euler's Pentagonal number theorem, Jacobi triple product identity, recursion formula for $p(n)$, Partition Congruences of Ramanujan.

Textbook(s):

1. Apostol, T. M. *Introduction to Analytic Number Theory* (Narosa Publishing House, New Delhi, 1993).
2. Hardy, G.H. and Wright, E. M. *An Introduction to the Theory of Numbers*, 4th Edition (Oxford University Press, 1960).

Reference book(s):

1. Niven, I. and Zuckerman, H. *An Introduction to the Theory of Numbers*, 5th Edition (Wiley Eastern, New Delhi, 2000).
2. Andrews, G.E. *Number Theory* (Hindustan Publishing Corporation, New Delhi, 1992).
3. Berndt, B. C. *Number Theory in the Spirit of Ramanujan* (AMS, RI, Providence, 2006).

MI 574 Advanced Algebra-II

(L3 -T1 -P0 -CH4 -CR

4)

Prerequisite: MI 305

Unit-1

Field extensions: Algebraic, normal and separable extensions of field.

Unit-2

Splitting fields.

Unit-3

Automorphisms of extensions, the fundamental theorem of Galois theory.

Unit-4

Finite fields.

Unit-5

Primitive elements, norm and trace, cyclotomic fields, cyclic extension.

Unit-6

Solution of polynomial equations by radicals, Kummer theory.

Textbook(s)

1. Morandi, P. *Field and Galois Theory*, GTM Vol. 167 (Springer-Verlag, 1996).
2. Lang, S. *Algebra* (Springer Verlag, Indian Edition, 2008).
3. Dummit & Foote *Abstract Algebra* (John Wiley & Sons., 2005).

Reference book(s)

1. Cohn, P. M *Algebra*, Vols. I & Vol. II (John Wiley & Sons, 1985 and 1988).

MI 576 Quantum Mechanics-II

(L3 -T1 -P0 -CH4 -CR

4)

Prerequisite: MI 556

Unit-1

Time independent and time dependent schrodinger equation, interpretation of wave function. Particle constrained in three dimension, potential well, rectangular potential barrier, theory of alpha decay.

Unit-2

Schrodinger equations for Simple Harmonic Oscillator, Solution by the method of separation of variables, Quantisation of energy levels, Hermite polynomials.

Unit-3

Hydrogen atoms and orbitals, Lauguerre polynomials, Quantum Theory of Angular Momentum, Quantisation of angular momentum, Ladder operators, Spherical Harmonics.

Unit-4

Addition of angular momenta, Pauli spin matrices, Space quantisation, spin quantisation, Addition of orbital and spin angular momentum, Clebsch-Gordon coefficient.

Unit-5

Formal Structure of Quantum Mechanics, Postulates, Linear vector space, basis, quantum mechanical operators, Dirac bra and ket notation, unitary transformation, Matrix Mechanics.

Unit-6

Time independent perturbation theory, variational method, WKB approximation, Time dependent perturbation theory, Quantum theory of scattering, motion in a magnetic field.

Unit-7

Relativistic quantum mechanics: Klein Gordon equation, equation of continuity and interpretation in Klein Gordon equation and its limitations.

Unit-8

Dirac equation for a free fermion, Dirac gamma matrices, bilinear forms, conservation of angular momentum, inherent existence of spin in Dirac theory, interpretation of negative energy solution of Dirac equation, concept of antiparticle and fermi sea.

Textbook(s)

1. Schiff, L. I. *Quantum Mechanics* (McGraw Hill, 1986).
2. Enderson, E. E. *Introduction to Modern Physics and Quantum Mechanics* (Macmillan India Ltd, 1979).
3. Ghatak, A. K. & Loknathan, S. *Quantum Mechanics* (Macmillan India Ltd, 1982).
4. Bjorken, J. D. & Drell, S. D. *Relativistic Quantum Mechanics* (McGraw Hill, New York, 1964).

Reference book(s)

1. Methews, P.M. and Venkatesan, K. *Quantum Mechanics* (Tata McGraw Hill, 1990).
2. Merzbacher *Quantum Mechanics* (John Wiley & Sons, NY, 1970).
3. Dirac, P. A. M. *The Principles of Quantum Mechanics* (Oxford University Press, 1958).
4. Parthasarathy, R. *Relativistic Quantum Mechanics* (Alpha Science Int. Ltd., 2010).
5. Schwabl, F. *Advanced Quantum Mechanics* (Springer-Verlag, 2008).

MI 577 Mathematical Modeling II

(L3 -T1 -P0 -CH4 -CR

4)

Unit-1

Fundamentals of Mathematical Modelling. Characteristics of Mathematical Models.

Unit-2

Single-species growth, Malthusian and Logistic growth models.

Unit-3

Gompertz and Weibull growth models. Examples of some Mortality Models

Unit-4

The general autonomous and Non-autonomous growth Model. Predation and parasitism.

Unit-5

Solutions of Lotka-Volterra Systems for predator-prey interactions, Increasing and diminishing returns, Perturbed models.

Unit-6

Existence of limit cycle for perturbed models, Intermediate predator-prey models, A generalized Gauss model.

Unit-7

Lotka-Volterra competition models, The competitive exclusion principle, Competition for fixed resources, Competition for renewable resources.

Unit-8

Lotka-Volterra Cooperation models, Kolmogorov Type models. Diffusion and pollution models, Models for fishery resources.

Textbook(s)

1. Freedman, H.I. *Deterministic Mathematical Models in Population Ecology* (Marcel Decker, 1980).
2. Renshaw, E. *Modelling Biological Populations in Space and Time* (Cambridge University Press, 1991).

Reference book(s)

1. Goh, B.S. *Management and Analysis of Biological Populations* (Elsevier Scientific Publishing Company, 1980).

MI 580 Sampling Techniques-II

(L3 -T1 -P0 -CH4 -CR

4)

Unit-1

Double Sampling, Cluster Sampling, Probability proportion to size with replacement sampling, varying probability without replacement sampling.

Unit-2

Hurwitz-Thomson estimator, Midzuno-Lahiri-Sen Sampling Strategy, Des Raj's, Murthy's Sampling strategies, etc.

Unit-3

Errors of Surveys: Sampling and non-sampling error.

Unit-4

Some problem of Inference under a fixed population set-up, Interpenetrating samples, Small area estimation.

Textbook(s)

1. Cochran, W. G. *Sampling Technique* (Wiley Eastern, New Delhi, 1977).
2. Sukhatme, P. V. Sukhatme, B. V., Sukhatme S., and Ashok, C., *Sampling Theory of Survey with Applications* (Iowa State University Press, Ames, Iowa, 1984).
3. Murthy, M. N. *Sampling Theory & Methods*, 2nd edition (Stat. Pub. Soc., Calcutta., 1977).

Reference book(s)

1. Mukhopadhyay, P. *Theory and Methods of Survey Sampling* (Prentice-Hall of India Pvt. Ltd, New Delhi, 1998).
2. Hansen, M. H., Hurwitz, H.N. and Madow, W. G. *Sample Survey Methods and Theory*, Vols. I and II (Wiley, N.Y., 1953).

3. Lish, L. *Survey Sampling* (Wiley, N.Y., 1965).
4. Jensen, R. J. *Statistical Survey Techniques* (Wiley, N.Y., 1978).
5. Des Raj and Chandhok, P. *Sample Survey Theory* (Narosa Publishing House, New Dehi, 1998).

MI 581 Stochastic Process –II

(L3 -T1 -P0 -CH4 -CR

4)

Unit-1

Branching processes- Properties of generating functions of Branching processes, Probability of Extinction, Distribution of the total number of progeny.

Unit-2

Galton-Watson process. Introduction Brownian motion process.

Unit-3

Wiener process, first passage time distribution for Wiener process, Ornstein-Uhlenbeck process.

Unit-4

Queueing systems, Single server queueing models ($M/M/1/\mu$, $M/M/1/k$, $M/M/\mu/\mu$, etc.)

Textbook(s)

1. W. Feller *An Introduction to Probability Theory and its Applications*, II (Wiley, 1998).
2. Bhattacharyya, R. and Waymire, E. C. *Stochastic processes with applications* (SIAM, 1990).

Reference book(s)

1. Medhi, J. *Stochastic Processes* (Wiley Eastern Ltd., New Delhi, 1994).

MI 582 Reliability Theory

(L3 -T1 -P0 -CH4 -CR

4)

Unit-1

Exponential failure model: properties of exponential distributions, estimation of mean life with complete samples.

Unit-2

Reliability estimation: Estimation of reliability in Stress-Strength Models, estimation with censored samples, estimation based on components of order statistics: k out of n .

Unit-3

Gamma and Weibull distributions (one, two and three parameters)

Unit-4

Estimation of complete samples, truncated and censored samples. An application of the Kaplan-Meier estimator and its extensions.

Unit-5

Reliability estimation of Normal and related distributions.

Unit-6

Reliability estimation: mixture distributions and competing risks.

Unit-7

Reliability of series / parallel systems : Series system with identical components

Unit-8

Reliability bounds - classical approach and - Bayesian approach.

Textbook(s)

1. Polvoko, A. M. *Fundamental of Reliability Theory* (Academic Press, New York, 1968).
2. Zacks, S. *Theory of Statistical Inference* (Wiley, New York, 1971).
3. Sinha, S. K. *Reliability and Life Testing* (Wiley Eastern Ltd., New Delhi, 1986).

Reference book(s)

1. Ravichandran, N. *Stochastic Methods in Reliability Theory* (Wiley Eastern Ltd., 1990).
2. Trivedi, Kishor Shribharbhai. *Probability & Statistics with reliability, Queueing and Computer Science Applications* (PHI, 1992).
3. Bazowsky, I. *Reliability: Theory and Practice*, Englewood Cliffs (N.J., Prentice Hall, 1961).
4. Kapur, K. *Reliability in Engineering Design* (N.Y., Wiley, 1977).

MI 584 Multivariate Analysis-II

(L3 -T1 -P0 -CH4 -CR

4)

Unit-1

Inference on parameters of Multivariate normal distributions, One population and Two Population cases.

Unit-2

Wishart Distributions, Hotellings T^2 .

Unit-3

Discriminant analysis, Mahalanobis D^2 .

Unit-4

Testing general linear hypotheses: Estimation of parameters in multivariate linear regression, distribution of F and T^2 , Computation of F and T^2 .

Unit-5

Likelihood ratio criteria for testing linear hypotheses about regression coefficients, Moments of Likelihood ratio criterion.

Unit-6

Principal Components: Definition of Principal Components in the Population, Maximum likelihood Estimates of the Principal Components and their Variances.

Unit-7

Computation of the Maximum Likelihood Estimates of the Principal Components.

Unit-8

Canonical Correlation and Canonical Variables: Canonical Correlations and Variables in the Population, Estimation of Canonical Correlations and Variables, Computation. Cluster Analysis.

Textbook(s)

1. Anderson, T. W. *An Introduction to Multivariate Analysis*, 2nd Edition (Wiley, 1984).
2. Khirsagar, A. M. *Multivariate Analysis* (Marcell Dekker, New York).
3. Krishnaiah, P. R. *Some recent developments on real multivariate distributions*, Development in Statistics, Vols. I & II (Academic Press, New York, 1978).

Reference book(s)

1. Johnson, N. L. and Kotz, S. *Continuous Multivariate Distributions* (John Wiley, New York).
2. Kendall, M. G. *Multivariate Analysis* (NY, Hamer Press, 1975).
3. Maxwell, A. E. *Multivariate Analysis in Behavioural Research*, London (Chapman & Hall, 1977).

4. Chatterjee, S. and Price, B. *Regression Analysis by Examples* (John Wiley, NY, 1977).
5. Johnson, R. A. and Wichern, D. W. *Applied Multivariate Statistical Analysis*, 3rd Ed (PHI, 1998).

MI 585 Fuzzy Sets and Their Applications-II

(L3 -T1 -P0 -CH4 -CR

4)

Unit-1

Fuzzy logic, fuzzy propositions, fuzzy quantifiers, linguistic variables, inference from conditional fuzzy propositions, compositional rule of inference.

Unit-2

Approximate reasoning - an overview of fuzzy expert systems, fuzzy implications and their selection, multi-conditional approximate reasoning, role of fuzzy relation equation.

Unit-3

An introduction to fuzzy control - fuzzy controllers, fuzzy rule base, fuzzy inference engine.

Unit-4

Fuzzification, defuzzification and the various defuzzification methods.

Unit-5

Decision making in fuzzy environment - individual decision making, multi-person decision making, multi-criteria decision making, multistage decision making, fuzzy ranking methods.

Unit-6

Fuzzy logic as a tool in soft computing.

Textbook(s)

1. Klir, G. J. and Yuan, B. *Fuzzy Sets and Fuzzy Logic : Theory and Applications* (Prentice Hall of India, New Delhi, 1997).

Reference book(s)

1. Zimmermann, H. J. *Fuzzy set theory and its Applications* (Allied publishers Ltd., New Delhi, 1991).

MI 586 Parallel Numerical Algorithms

(L3 -T1 -P0 -CH4 -CR

4)

Unit-1

Fundamentals of Parallel computing. Parallel techniques and algorithms.

Unit-2

Theoretical models of parallel computation: Variants of the PRAM model. Performance of parallel algorithms.

Unit-3

Basic Techniques: Balanced trees, recursive doubling, divide and conquer, partitioning. Pipe lining, Accelerated cascading, symmetry breaking. List ranking, the Euler tour techniques, tree contraction. Algorithms for searching, merging and sorting.

Unit-4

Graph algorithms: Connected components, colouring. Parallel algorithms on interconnection networks and other architectures. Limits to parallelisability. P-completeness.

Unit-5

Parallel algorithms for linear algebraic equations; Design of parallel algorithms for eigen value problem; parallel issues of factorization. Parallel implementation of classical iterative methods.

Unit-6

Parallel methods for ordinary and partial differential equations.

Textbook(s)

1. Quinn, Michael J. *Parallel computing theory and practice*, 2nd ed (Mc-Graw Hill, 2000).
2. Joseph, Jaja. *An introduction to parallel algorithms* (Addison Wesley, 1992).

Reference book(s)

1. Reif H.H. *Synthesis of parallel algorithms* (Morgan Kaufmann publishers, San Mateo, California, 2000).
2. Leighton, F.T. *Introduction to parallel algorithms and architectures: Arrays trees, Hypercubes* (Morgan Kaufmann publishers, San mateo, California, 2000).

MI 587 Finite Element Method

(L3 -T1 -P0 -CH4 -CR

4)

Unit-1

Introduction: Basic concepts of process of discretization, subdivision, continuity, convergence, bounds, error. Principle and Laws. Cause and effects.

Unit-2

Finite Element Methods: Introduction, general idea of element configuration, approximation models or functions. Strain (Gradient)-Displacement (unknown) and stress-strain (constitutive) relationships, element equations. Energy methods, methods of weighted residuals. Introduction to variational calculus.

Unit-3

One-dimensional Stress Deformation: Element configuration, local and global coordinates, interpolation functions, stress-strain relationship, element equations and assembling, direct stiffness method, formulation by Galerkin method.

Unit-4

One-dimensional flow: Theory and formulation, finite element formulation, variational approach, Galerkin method, boundary conditions.

Unit-5

Further Applications: One-dimensional time dependent flow: introduction to uncoupled and coupled problems, beam bending and beam-column, one-dimensional mass transport and one-dimensional stress wave propagation

Unit-6

Two and Three-dimensional formulations: Introduction, two-dimensional formulation, triangular and quadrilateral elements, three-dimensional formulation, tetrahedron element, brick element

Unit-7

Applications: Potential, thermal, fluid and electrical flow: a brief theory and their finite element formulations

Unit-8

Coding: Computer codes in Matlab/C/C++.

Textbook(s)

1. Desai, C. S. and Kundu, T. *Introductory Finite element method* (CRC Press, 2001).
2. Braess, D. and Schumaker, L. L. *Finite elements: theory, fast solvers and applications in solid mechanics* (Cambridge University Press, 2001).
3. Brenner, S. C. and Scott, L. R. *The mathematical theory of finite element methods*, (Springer, 2008).

Reference book(s)

1. Ciarlet, P. G. *The finite element method for elliptic problems* (North Holland, 1978).
2. Thome\`e, V. *Galerkin finite element methods for parabolic problems* (Springer, 1997).

MI 588 Applied Matrix Theory**(L3 -T1 -P0 -CH4 -CR****4)****Unit-1**

Review of basic linear algebra.

Unit-2

Canonical factorization, Q-forms.

Unit-3

Courant-Fischer minmax & related theorems. Perron-Frobenius theory. Matrix-stability.

Unit-4Inequalities, g-inverse (A^- , A^m , A^+).**Unit-5**

Direct, iterative, projection and rotation methods for solving linear systems & eigenvalue problems.

Unit-6

Applications

Textbook(s)

1. Datta, K. B. *Matrix and Linear Algebra* (PHI, 1991).
2. Watkins, D. S. *Fundamentals of Matrix Computation* (Wiley, 1991).
3. Golub, G. H. and Loan, C. F. Van. *Matrix Computation* (John Hopkin U. Press, Baltimore, 1996.)

Reference book(s)

1. Stewart, G. W. *Introduction to Matrix Computations* (Academic Press, 1973.)

MI 591 Computational Fluid Dynamics**(L3 -T1 -P0 -CH4 -CR****4)****Unit-1**

Basic equations of Fluid Dynamics. Analytical Aspects of PDE. Iterative methods – Stationary Methods. Krylov subspace methods.

Unit-2

Stationary Convection diffusion equations, Non-stationary convection diffusion equations. Conservation laws. Incompressible plane flows, Stream function and vorticity equations, Conservative form and normalizing systems, Method for solving vorticity transport equation, Basic Conservative property.

Unit-3

Finite volume and finite difference methods. Convergence and stability analysis, Explicit and implicit methods, Stream function equation and boundary conditions, Solution for primitive variables. Finite volume method, Application to Euler equations, Upwind difference scheme, Viscous flow solutions, Total variation diminishing schemes, Godunov-type schemes.

Unit-4

Simple CFD Techniques, Lax-Wendroff Technique, Mac Cormack's Techniques, Staggered grid, SIMPLE Algorithm. Numerical Solutions of Navier-Stokes equations on collocated and on staggered grids.

Textbook(s)

1. Chung, T.J. *Computational fluid Dynamics* (Cambridge University Press, 2005).
2. Fletcher, C. A. J. *Computational Techniques for Fluid Dynamics, Volume 1 & 2*, (Springer Verlag, 1992).

Reference book(s)

1. Chow, C. Y. *Introduction to Computational Fluid Dynamics* (John Wiley, 1979).
2. Holt, M. *Numerical Methods in Fluid Mechanics* (Springer Verlag, 1977).
3. Wirz, H. J. and Smolderen, J. J. *Numerical Methods in Fluid Dynamics* (Hemisphere, 1978).
4. Anderson, J. D. *Computational Fluid Dynamics* (Mc-Graw Hill, 1995).
5. Anderson, D. A., Tannehill, J. C. and Pletcher, R. H. *Computational Fluid Dynamics and Heat Transfer* (McGraw Hill, 1984).

MI 593 Wavelets and Applications**(L3 -T1 -P0 -CH4 -CR****4)****Unit 1**

Introduction: Reviews of Fourier analysis and L^p spaces, Wavelets and atomic decomposition of functions.

Unit 2

Multi resolution analysis: Multi-resolution signal decomposition, Multi-resolution analysis and the construction of wavelets, Examples of wavelets, QMF and fast wavelet transform.

Unit 3

Continuous Wavelet transform: Localization, Regularity and approximation properties of wavelets, Construction of compactly support wavelets, Orthonormal bases of compactly supported wavelets.

Unit 4:

Wavelets sampling techniques, Convergence of wavelet expansion.

Unit 5

Time frequency analysis: Time frequency analysis for signal processing, Application of wavelets in image and signal processing.

Textbook(s)

1. Daubechies, I. *Ten Lectures on Wavelets*, SIAM, 1992
2. Ahmad, K. and Shah, F. A., *Introduction to Wavelets with Applications*, Real World Education Publishers, New Delhi, 2014.

Reference book(s)

1. Meyer, Y. *Wavelets: Algorithm and Application*, SIAM, 1993
2. Kaiser, G. *A Friendly guide to Wavelets*, Birkhauser, 1994

MI 594 Advanced Topology –I**(L3 -T1 -P0 -CH4 -CR****4)****Unit-1**

Nets and filters, convergence in terms of nets and filters, ultrafilters and compactness.

Unit-2

Urysohn's Lemma, Tietze Extension theorem.

Unit-3

Theories of metrization, Urysohn metrization theorem.

Unit-3

Paracompactness, characterisation in regular spaces, metrization based on paracompactness.

Unit-4

Nagata-Smirnov theorem, Stone's theorem, Smirnov's metrization theorem.

Unit-5

Homotopy and the fundamental group, computation of the fundamental group of the circle.

Textbook(s)

1. Joshi, K. D. *Topology* (Wiley-Eastern, 1988).
2. Munkres, J. R. *Topology: A first course* (2/e) (Prentice-Hall, 2000).

Reference book(s)

1. Kelley, J. L. *General Topology* (Graduate texts in Mathematics, Vol. 27, Springer, 1991).
2. Willard, S. *General Topology* (Addison-Wesley, Reading, 1970).

MI 595 Numerical Solutions of ODE

(L3 -T1 -P0 -CH4 -CR

4)

Unit -1

Review of some basic concept of Numerical Analysis, Basics of Initial Value Problem (IVP), Explicit and implicit single step Methods, Euler's method, Runge-Kutta methods.

Unit -2

System of differential equations, Adaptive numerical methods, Predator- Corrector methods, explicit and implicit multistep methods, stability analysis.

Unit -3

Higher order differential equations, Non-uniform step methods, Boundary value problems, Convergence of difference schemes.

Unit -4

Linear eigenvalue problems.

Textbook(s)

1. Jain, M. K., Iyenger S. R. K., and Jain, R. K. *Numerical Methods for Scientific and Engineering Computation* (Wiley Eastern, 1993).
2. Lambert, J. D. *Numerical methods for Ordinary Differential equations* (John Wiley & Sons, 1991).

Reference book(s)

1. Henrici, P. *Discrete Variable Methods in Ordinary Differential Equations*. (John Wiley & Sons, New York, 1962).
2. Jain, M. K. *Numerical Solutions of Differential Equations* (Wiley Eastern, 1991).
3. Miller, Richard K. *Introduction to Differential Equations* (Prentice Hall, New Jersey, 1991).
4. Hoffman, J. D. *Numerical methods for Engineers and Scientists* (Mc-Graw Hill, 2000).
5. Otto, S.R. & Denier, J. P. *An Introduction to Programming and Numerical Methods in MATLAB* (Springer, 2009).

MI 596 Advanced Topology – II

(L3 -T1 -P0 -CH4 -CR

4)

Unit-1

Uniformities, uniform continuity, product uniformities, metrisation.

Unit-2

Completeness and compactness in uniform spaces.

Unit-3

Topological groups, subgroups, quotient groups, homogeneous spaces, product groups.

Unit-4

Uniform structures in topological groups, complete groups, completion of topological groups.

Unit-5

Function spaces, point-wise convergence, uniform convergence, compact-open topology, k-spaces, equi-continuity, Ascoli theorem.

Textbook(s)

1. Joshi, K. D. *Topology* (Wiley-Eastern, 1988).
2. Munkres, J. R. *Topology: A first course* (2/e) (Prentice-Hall, 2000).

Reference book(s)

3. Engelking, R. *General Topology* (Polish Scientific Publishers, Warsaw, 1977).
4. Bourbaki, N. *Elements of Mathematics: General Topology*, Vols. I & II, (Springer-Verlag, 1988).

MI 597 Numerical Solutions to PDE**(L3 -T1 -P0 -CH4 -CR****4)****Unit-1**

Finite difference methods for Parabolic, Elliptic and Hyperbolic equations. Dirichlet, Neumann and Mixed problems.

Unit-2

Sparseness and the ADI method, Iterative methods for Laplace equation. Backward Euler, Crank-Nicolson schemes.

Unit-3

Stability, convergence and consistency analysis of finite difference methods, Lax's equivalence theorem.

Unit-4

Method of characteristics, Lax-Wendroff explicit method, CFL conditions, Wendroff implicit approximation.

Unit-5

Three dimensional elliptic problems.

Textbook(s)

1. Hoffman, J. D. *Numerical methods for Engineers and Scientists* (McGraw Hill, 2001).
2. Smith, G. D. *Numerical solutions to Partial Differential Equation* (Clarendon Press, Oxford, 1985.)
3. Johnson, C. *Numerical solution of Partial Differential equations by the Finite Element Method* (Cambridge University Press, 1987.)

Reference book(s)

2. Lapidus, L. and Pinder, G. F. *Numerical solutions of Partial Differential Equations in Science and Engineering* (John Wiley, 1982).
3. Langtangen, H. P. *Computational Partial Differential Equations* (Springer-Verlag, 1999.)
4. Jain, M. K., Iyenger, S. R. K. and Jain, R. K. *Numerical Methods for Scientific and Engineering Computation* (Wiley Eastern, 1993).
5. Jain, M. K., Iyenger, S. R. K. and Jain, R. K. *Computational Methods for Partial Differential Equations* (Wiley Eastern, 1994).

MI 598 Algebraic Geometry

(L3 -T1 -P0 -CH4 -CR

4)

Unit-1

Affine varieties defined over algebraically closed fields.

Unit-2

Projective varieties.

Unit-3

Rational mappings, bi-rational geometry.

Unit-4

Divisors, principal divisors especially on curves and surfaces.

Unit-5

Introduction to the language of schemes.

Unit-6

Riemann-Roch theorem for curves.

Textbook(s)

1. Smith, K.E. etc all, *An Invitation To Algebraic Geometry* (Springer, Indian Reprint 2005).
2. Musili, C. *Algebraic Geometry for Beginners*, TRIM 20 (Hindustan Book Agency, 2001).

Reference book(S)

1. Hartshorne, R. *Algebraic Geometry*, GTM Vol. 52 (Springer, 2005).
