COURSE STRUCTURE: Integrated M.Sc. (Physics)
Minimum Credit Requirement: 201 CR
Minimum duration: 10 Semesters
Maximum duration: 14 Semesters

Semester I

Course Code	**Course Name**	**L-T-P**	**CH**	**CR**	**Remark**
PI-101	Physics-I	2-0-1	4	3	
CI-101	Chemistry-I	2-0-2	6	4	
BI 101	Biology-I	2-0-1	4	3	
MI 101	Mathematics-I	2-1-0	3	3	
	CBCT Elective-I			3	CBCT list
	CBCT Elective-II			3	CBCT list
Total credits				**19**	

Semester II

Course Code	**Course Name**	**L-T-P**	**CH**	**CR**	**Remark**
PI 102	Physics-II	2-0-1	4	3	
CI 102	Chemistry-II	2-0-2	6	4	
BI 102	Biology-II	2-0-1	4	3	
MI 102	Mathematics-II	2-1-0	3	3	
	CBCT Elective-III			3	CBCT
	CBCT Elective-IV			3	CBCT
NS 102	National Service Scheme	0-0-2	4	2	
Total credits				**21**	

Semester III

Course Code	**Course Name**	**L-T-P**	**CH**	**CR**	**Remarks**
PI-211	Quantum Physics	2-1-0	3	3	*Offered only to non-major in Physics*
PI-203	Classical Mechanics	2-1-0	3	3	
PI-217	Mathematical Physics-I	2-1-0	3	3	
PI-218	Modern Physics	2-1-0	3	3	
PI-207	Physics Lab-I	0-0-4	8	4	
MI-211	Numerical Methods and Integrals	2-1-0	3	3	For Physics major students
	CBCT Elective-V			3	CBCT
Total credit				**19**	

Semester IV

Course Code	Course Name	L-T-P	CH	CR	Remarks
PI-216	Thermodynamics and Optics	2-1-0	3	3	*Offered only to non-major in Physics*
PI-205	Electromagnetism	2-1-0	3	3	
PI-214	Electronics	2-1-0	3	3	
PI-325	Thermodynamics and Statistical Physics	2-1-0	3	3	
PI-208	Physics Laboratory-III	0- 0-4	8	4	
MI-212	Introductory Statistics	2-1-0	3	3	Common paper
	CBCT Elective-VI			3	CBCT list
Total Credits				**19**	

Semester V

Course Code	Course Name	L-T-P	CH	CR	Remarks
PI-315	Mathematical Physics-II	2-1-0	3	3	
PI-202	Introductory Quantum Mechanics	2-1-0	3	3	
PI-204	Atomic and Nuclear Physics	2-1-0	3	3	
PI-316	Introduction to Photonics	2-0-1	3	3	
PI-303	Physical and Geometrical Optics	2-1-0	3	3	
PI-399	Physics Lab V	0-0-4	8	4	
Total credits				**19**	

Semester VI

Course Code	Course Name	L-T-P	CH	CR	Remarks
PI-307	Basic Material Science	2-1-0	3	3	
PI-317	Basic Computation Techniques	2-1-0	3	3	
PI-308	Laser Physics	2-1-0	3	3	
PI-311	Waves and Acoustics	2-1-0	3	3	
PI-314	Measurement Physics	1-1-1	4	3	
PI-300	Project	0-0-4	8	4	*To be carried out under the guidance of a faculty member*
Total credits				**19**	

Semester VII

Course Code	Course Name	L-T-P	CH	CR	Remarks
PI-403	Electrodynamics	2-1-0	3	3	
PI-413	Advanced Classical Mechanics	2-1-0	3	3	
PI-414	Quantum Mechanics	2-1-0	3	3	
PI-416	Condensed Matter Physics and Material Science-I	2-1-0	3	3	
PI-400	Physics Laboratory-VII	0-0-4	8	4	
PI-499	Physics and Computational Laboratory-VI	0-1-3	7	4	
	CBCT Elective-VII			3	CBCT list
Total credits				**23**	

Semester VIII

Course Code	Course Name	L-T-P	CH	CR	Remarks
PI-302	Digital Electronics and Microprocessor	2-1-1	5	4	
PI-310	Statistical Physics	2-1-0	3	3	
PI-402	Nuclear and Particle Physics	2-1-0	3	3	
PI-417	Advanced Mathematical Physics	2-0-1	4	3	
PI-498	Physics Laboratory-VIII	0-0-4	8	4	
PI-450	Seminar	0-0-2	4	2	
	CBCT Elective-VIII			3	CBCT
Total credits				**22**	

Semester IX

Course Code	Course Name	L-T-P	CH	CR	Remarks
PI-599	Project-I	0-0-6	12	6	*To be carried out under the guidance of a faculty member*
PI-551	Advanced Electrodynamics	2-1-0	3	3	
PI-552	Quantum Mechanics-II	2-1-0	3	3	
	Elective I	2-1-0	3	3	
	Elective II	2-1-0	3	3	
	CBCT Elective-IX			3	CBCT
Total credits				**21**	

Semester X

Course Code	Course Name	L-T-P	CH	CR	Remarks
PI-500	Project-II	0-0-10	20	10	*To be carried out under the guidance of a faculty member*
PI-553	Atomic and Molecular Spectroscopy	2-1-0	3	3	
	Elective III	2-1-0	3	3	
	Elective IV	2-1-0	3	3	
Total credits				**19**	

L: Lectures; T: Tutorials; P: Practical; CH: Contact Hours; (*all per week*); CR: Credits

Total Credits: (19 + 21 + 19 + 19 + 19 + 19 + 23 + 22 + 21 + 19) = **201**
Credits in Lab & Project: (4 + 6 + 4 + 4 + 5 + 5 + 7 + 6 + 6 + 10) = **57**
Total Credits excluding Lab & Project: = **145**
Total credits in CBCT: (6+6+3+3+0+0+3+3+3) = **27**

Electives Courses offered by the department in Semester IX and Semester X

To choose minimum of three for any specialization

Course Code	Course Name	L-T-P	CH	CR	Remark
	Astrophysics				
PI-412	Plasma and Astrophysics	**2-1-0**	**3**	**3**	
PI-505	Basic Astronomy & Astrophysics	**2-1-0**	**3**	**3**	
PI-506	Introduction to Cosmology	**2-1-0**	**3**	**3**	*prerequisite PI 505*
PI-515	High Energy & Extragalactic Astrophysics	**2-1-0**	**3**	**3**	
PI-518	General Theory of Relativity	**2-1-0**	**3**	**3**	
	Condensed Matter Physics

PI-560	Optical Metrology	**2-1-0**	**3**	**3**	

CBCT (Inter Disciplinary Credit) course offered by the department for the students of other departments

Course Code	Course Name	L-T-P	CH	CR	Remark
PH-601	Techniques for Simulation	**2-0-1**	**3**	**3**	
PH-602	History of Physics	**2-1-0**	**3**	**3**	
PH-603	Fourier Optics & Holography	**2-1-0**	**3**	**3**	

CBCT electives for Int. M.Sc. program are to be chosen from the list below

Course Code	Course Name	L-T-P	CH	CR	Remark
CS-535	Introduction to Scientific Computing	2-0-1	4	3	
EG-101	Communicative English	2-1-0	3	3	

ES-102	Elementary Environmental Science	2-1-0	3	3	
EG-102	Communicative English-II	2-1-0	3	3	Proposed
SC-102	Basic Sociology	2-1-0	3	3	
ES-542	Laboratory Guidance and Safety	2-1-0	3	3	Proposed
BM-101	Elementary Economics	2-1-0	3	3	
CL-121	Basic Chinese-I	2-1-0	3	3	Proposed
FL-101	Basic French-I	2-1-0	3	3	Proposed
GL-101	Basic German-I	2-1-0	3	3	Proposed
DM-301	Disaster Management	2-1-0	3	3	Proposed
CL-122	Basic Chinese- II	2-1-0	3	3	Proposed
FL-102	Basic French-II	2-1-0	3	3	Proposed
GL-102	Basic German-II	2-1-0	3	3	Proposed

Suggestive CBCT course titles

1. Communication English
2. English Literature One of the three novels (i) Fountainhead by Ayn rand, (ii) The Palace of Illusions by Chitra Banerjee Divakaruni and (iii) Thousand Splendid Suns by Khaled Husseini
3. Languages –two courses –any one of the languages
   German- I & II
   Chinese- I & II
   Japanese- I & II
4. History of Science
5. History of Technology
6. Psychology
7. Sociology
8. Economics
9. Management Practices
10. Information Management Systems
11. Motivational case Studies- atleast 15 to be discussed.

Detailed Syllabi

Semester I

PI-101 Physics I (L2-T0-P1-CH4-CR3)

Coordinate systems, elements of vector algebra in plane polar, cylindrical, spherical polar coordinate systems,

Gradient, divergent, curl, line integrals, Stoke's theorem, Gauss' theorem,

Dimensional analysis, solutions for one-dimensional equation of motion in various forms, Frames of reference, relative velocity and accelerations, Elements of special theory of relativity, postulates, Galilean and Lorentz transformations, equivalence of mass and energy, Time dilation, length contraction, Doppler effect, twin paradox, mass energy equivalence, general theory of relativity,

Work-energy theorems, energy diagrams, Conservation of linear and angular momentum and collisions, central forces, motion in non-inertial frames, centrifugal and Coriolis forces, derivations of Kepler's law, hyperbolic, elliptic and parabolic orbits,

Elementary rigid body dynamics, variable mass problems,

Elasticity: Young's, bulk and shear moduli.

Textbooks:

1. Kleppner, D. and Kolenkow, R., *Introduction to Mechanics,* (McGraw-Hill Book Co., Inc, 1973)
2. Resnick, R., *Introduction to Special Relativity,* (Wiley)
3. Mathur, D. S., *Mechanics,* (S Chand & Co Ltd, 2000)

Reference Books:

1. Simon, K. R., *Mechanics,* 3rd edition, (Addison-Wesley Pub. Co., 1971)
2. Kittel, C., Knight, W. D. and Ruderman, M. A., *Mechanics,* 2nd edition, (McGraw-Hill Book Co., Inc., 1973)
3. Chow, T. L., *Mathematical Methods for Physicists: A concise introduction*, 1st edition, (Cambridge Univ. Press, 2000)
4. Riley, K. F., Hobson, M. P. and Bence, S. J., *Mathematical Methods for Physics and Engineering*, 3rd edition, (Cambridge, 2006)
5. Young, H. D. and Freedman, R. A., *University Physics,* 12th edition, (Pearson, 2009)

Laboratory component:

1. Laboratory related Instructions:
   a. Laboratory safety measures; handling of chemicals; electrical and electronics items & instruments; handling of laser and laser related instruments and experiments; handling of Radioactive samples and related instruments; general safety measures etc.
   b. Management and maintenance of laboratory room, equipment etc.
   c. Techniques of data collection, data analysis, measurement of error and error analysis etc.
   d. Technique/ method of notebook record.
   e. To calculate mean, standard deviation for a given measurement data

2. Familiarization with equipment and components:
   a. Familiarization of different Electrical and Electronic components and hence identification & determination of values of unknown components
   b. Familiarization of different Optical components and hence show different optical behaviour & pattern by using different optical components and optical sources (white light, laser, sodium light etc.)
   c. Familiarization of Microsoft excel, Origin and other software for data analysis
   d. Soldering & de-soldering of components in a circuit board
3. Use of equipment:
   a. Multimeter and its uses
   b. Function generator and its uses
   c. CRO and its use to measure the wavelength, frequency, amplitude etc. of a given electrical signal
4. To study the variation of time period with distance between centre of suspension and centre of gravity for a bar pendulum and to determine: (a) Radius of gyration of the bar about an axis through its C.G. and perpendicular to its length, (b) The value of g in the laboratory.
5. Determine the value of the acceleration due to gravity (on Earth) by using Kater's pendulum.
6. To determine the surface tension of the given liquid (water/ CCl4) by capillary tube method.
7. Design a LCR circuit with the given components and to measure the resonance frequency of the circuit.
8. Determine the moment of the given bar magnet and horizontal component of Earth's magnetic field by magnetometers.
9. To measure the focal length of a given lens using (a) Bessel's method, and (b) Magnification method.

To obtain the refractive index and dispersion of the material of a 60^0 prism using a spectrometer.

Semester II

PI-102 Physics II (L2-T0-P1-CH4-CR3)

Electrostatics in vacuum: Coulomb's law, Electric field due to a system of charges, Gauss's law in differential and integral forms, The electric dipole, its electric field and potential, The capacitance of parallel plate, Cylindrical and spherical capacitors,

Magnetic effects in the absence of magnetic media: the Biot-Savart law, the force on a current and on moving charges in a B-field, the magnetic dipole,

The couple and force on, and the energy of, a dipole in an external electric field and in an external magnetic field,

Physics of diodes and transistors, Zener Diodes, Breakdown Mechanism,

Digital Electronics: Number systems, 2's complement method, Boolean algebra, Gates, Universal gates and their applications

Textbooks:

1. Horowitz, P. and Hill, W., *The Art of Electronics*, 2nd edition, (Cambridge University Press, 1995)
2. Milliman, J. and Halkias, C. C., *Integrated Electronics,* (Tata McGraw Hill, 2004)

3. Tocci, R. J. and Moss, G.L. *Digital Systems: Principles and Application,* (Pearson, 2009)
4. Rakshit, P.C. and Chattopadhaya, D., *Electricity and Magnetism,* (New Central Book Agency, 2012)

Reference Books:

1. Malvino A. P., *Electronic Principles*, (McGraw-Hill Education (India) Pvt Limited, 2007)
2. Boylestad, R. and Nashelsky, L., *Electronic Devices and Circuit Theory*, 8^{th} edition, (Pearson Education, India, 2004)

Laboratory component:

1. Determination of Young's modulus of the given wire by torsional oscillation (Searl's) method.
2. Determination of the co-efficient of viscosity of water by Poiseulle's method.
3. Measurement of frequency of an unknown tuning fork using a sonometer.
4. Determine the coefficient of linear expansion of the given metal sample by optical lever method.
5. Study of Lissajous figure of two different waves using CRO and find out the unknown frequency of an electrical signal.
6. Determine the wavelength of the given source of light using Fresnel's biprism.
7. Determination and plot I-V characteristics of a LED.
8. To study elastic and inelastic collisions using suspended spherical balls of different materials.
9. To measure the force between two current carrying conductors.
10. Determine the Mechanical/ Electrical equivalent of heat by Joule's calorimeter.

Semester III

PI-211 **Quantum Physics** (Non-major) **(L2-T0-P1-CH4-CR3)**

Black body radiation, Kirchhoff's radiation law, Rayleigh-Jeans law, Wien's law, Stefan's law, EM waves, photoelectric effect, wave particle duality, particle properties of waves,

Atomic physics: Rutherford model, Bohr model, hydrogen atom (quantum numbers and spectral series; qualitative), X-ray, Moseley's law,

Limitations of classical physics: Interpretation of spectral lines, the photo-electric effect, Franck-Hertz experiment and the existence of energy levels, Experimental evidence for wave-particle duality; X-ray diffraction and Bragg law, Compton scattering, Electron and neutron diffraction, deBroglie hypothesis, Qualitative discussion of the problem of the stability of the nuclear atom,
Basics of Lasers, Basics particle physics: elementary forces and particles.

Schrodinger equation: The concept of the wave function as a probability amplitude and its probabilistic interpretation. Plane wave solutions of the one-dimensional time-dependent Schrodinger equation for a particle in free space and elementary derivation of the phase and group velocities (quantitative discussion of wave packets is not required).

Uncertainty relation: The position-momentum uncertainty relation and simple consequences, Solutions of the one-dimensional Schrodinger's equation for an infinite square well potential; qualitative treatment of the finite well (derivation not required), Linear harmonic oscillator

Textbooks:

1. Beiser, A., *Concepts of Modern Physics* (McGraw-Hill, 2002)
2. Krane, K. S., *Modern Physics* (Wiley)

Reference Books:

1. Beiser, A., Perspectives *of Modern Physics* (McGraw-Hill Inc., USA)
2. Thornton, S. T. and Rex, A., *Modern Physics for Scientists and Engineers* (Cengage Learning; 4 edition)
3. Gautreau, R., *Schaum's Outline of Modern Physics*, 2nd edition, (McGraw-Hill)
4. Young, H.D. and Freedman, R.A., *University Physics,* 12th edition, (Pearson, 2009)

PI-203 Classical Mechanics (L2-T1-P0-CH3-CR3)

Mechanics of a particle: Conservation theorems for a particle, motion of a particle under damping forces, motion of a particle under central force, motion of a body in a resisting medium, Kepler's laws of planetary motion, moving co-ordinate systems, Galilean transformation, Coriolis force, Foucault's pendulum,

Mechanics of a System of Particles: Centre of mass and its motion, conservation theorems for a system of particles, collision problems, constraints, generalised co-ordinates, configuration space, principle of virtual work, D'Alembert's principle,

Lagrangian Formulation: Lagrange's equation, the rules of forming Lagrange's equation, Lagrange's equations for non-conservative forces, spherical and cylindrical co-ordinates, Hamilton's principle and Lagrange's equation, application of Lagrange's equation, motion of charged particle in an electromagnetic field, superiority of Lagrange's approach over Newtonian approach,

Hamiltonian Formulation: Phase space, Hamiltonian function and Hamiltonian equation, Application of Hamiltonian equation, Harmonic oscillator, compound pendulum, cyclic co-ordinates, Liouville's theorem, Routh's procedure

Textbooks:

1. Upadhyaya, J. C., *Classical Mechanics*, (Himalayan Publishing House)
2. Gupta, S. L., Kumar, V. and Sarma, H. V., *Classical Mechanics*, (Pragati Prakashan)

Reference Books:

2. Rana N. C., and Joag, P. S., *Classical Mechanics,* (Tata McGraw-Hill, 1991)
3. Takwale, R. G. and Puranik, P. S., *Introduction to Classical Mechanics,* (Tata McGraw-Hill, 1978)

4. Panat, P. V., *Classical Mechanics*, (Narosa Publishing House)

PI-217 Mathematical Physics-I (L2-T0-P1-CH4-CR3)

Scalar and vector fields, differentiations, divergence and curl; integrations, Greens, Gauss's and Stokes theorems and their applications, transformations of coordinate systems and vector components, metric coefficients, curvilinear coordinates; expressions for grad., div., and curl; Helmholtz equation in three-dimensions and separable variables in various coordinate systems; matrices and determinants,

Beta, gamma and error functions; relationship between the beta and gamma functions; reduction of some classes of integrals to gamma functions; Sterling's formula; derivation of values of gamma functions,

Fourier series: Evaluation of coefficients, graphical representations, even and odd functions, properties of Fourier series, Fourier integrals,

Elements of probability: Mathematical probability, compound probability, total probability, sample space, random variables, expectation value, averages, mean, standard deviation, binomial distribution, normal distribution; variance, covariance and correlation; theory of errors, central limit,

Random Process: Random variables to random process, statistical averages, stationary processes

Textbooks:

1. Harper, C., *Introduction to Mathematical Physics, (*Prentice Hall, 2009)
2. Arfken, G. B., and Weber, H. J., *Mathematical Methods for Physicists*, (Elsevier Ltd, Oxford, 2005)
3. Spiegel, M. R., *Vector Analysis*, Schaum's outline series, (Tata McGraw-Hill 1979)

Reference Books:

1. Morganeau, H. and Purphy, C. M., *The Mathematics of Physics and Chemistry,* (Young Press, 2009)

PI-218 Modern Physics (L2-T0-P1-CH4-CR3)

Particle-like properties of electromagnetic radiation: Electromagnetic spectrum, electromagnetic waves, blackbody radiation, the photoelectric effect, the Compton effect, Bremsstrahlung and X-ray production,

Wave-like properties of particles: deBroglie hypothesis, uncertainty relationships for classical waves, Heisenberg uncertainty relationships, wave packets, One-dimensional time independent Schroedinger equation, probabilities and normalization, applications to the free particle, particle in a box (1-D and 2-D), the simple harmonic oscillator

Models of the atom: Thompson model, Rutherford model, line spectra, Bohr model, Franck-Hertz experiment, the correspondence principle, deficiencies of Bohr atomic model, vector model, intrinsic spin, Stern-Gerlach experiment, hydrogen atom energy levels, Zeeman effect, fine structure, electronic states in many-electron atoms, X-rays,

Expansion of universe, background radiation, big bang cosmology, the future of the universe

Textbooks:

1. Krane, K. S., *Modern Physics*, (John Wiley & Sons, 1983)
2. Bernstein, J., Fishbane, P. M. and Gasiorowicz, S. G., *Modern Physics*, 1st edition, (Prentice-Hall, 2000)

PI-207 Physics Laboratory-I **(L0-T0-P4-CH8-CR4)**

1. To observe the rotation of the plane of polarization of monochromatic light by a given solution and to determine the specific rotation of sugar solution using a Polarimeter.
2. Determine the wavelength (λ) of the given monochromatic light by using Lloyd's mirror.
3. To measure thermo e.m.f. of a thermocouple as a function of temperature and find inversion temperature.
4. To measure the radius of curvature of a given concave mirror and to measure the refractive index of a liquid by this method.
5. To measure the inductance of a given inductor using Anderson bridge.
6. To measure the capacitance of a capacitor by de-Sauty method and to find permittivity of air.
7. To study Op-Amp. characteristics:
   a. To get data for different input bias current,
   b. To measure and null the output offset voltage.
8. Determine the efficiency of the given solar cell for different intensity and different frequency of light sources.
9. Measure the elasticity of the given sample by Newton's ring method.

Semester IV

PI-216 **Thermodynamics & Optics** (non-major) **(L2-T1-P0-CH3-CR3)**

Brownian motion (Einstein-Langevin theory), Equation of state of a gas, Andrew's experiment, Van der Waal's equation of state, critical constants and law of corresponding states,

Thermal conductivity, Zeroth and first law of thermodynamics, specific heats of gases, isothermal and adiabatic processes, Second law of thermodynamics, Heat engine, Kelvin-Planck statement of second law, Clausius' statement of second law, Entropy, entropy changes in reversal and irreversible processes, entropy of an ideal gas, relation between entropy and probability, enthalpy, Gibbs-Helmholtz function, Maxwell's thermodynamic relations and their applications,

Geometrical optics: Fermat's principle and its application in establishing laws of reflection and refraction at the plane and the spherical boundaries, refraction of paraxial rays at spherical surface, thin lens, sign convention, combination of thin lenses, conjugate foci,

Physical optics: Interference, superposition of waves, Fresnel's bi-prism, Michelson interferometer, diffraction at a single slit and a double-slit, Polarisation: Double refraction, optic axis and $CaCO_3$ crystal, plane, circular and elliptically polarised light

Textbooks:

1. Saha, M. N. and Srivastava, B. N., *A Treatise on Heat*, 5th edition, (The Indian Press, 1965)
2. Chakravarty, P. K., *Advanced Textbook on Heat,* (New Central Book agency (P) Ltd)
3. Mathur, *B.K.,* and Pandya, T.P., *Principles of Optics,* (Tata McGraw Hill International, 1981)
4. Chakraborty, P.K., *Geometrical and Physical Optics,* 3rd Edition, (New Central Book agency (P) Ltd, 2005)

Reference Books:

5. Sears, F. W. and Salinger, G. L., *Thermodynamics, Kinetic Theory and Statistical Thermodynamics,* (Addison-Wesley Pub. Co., 1975)

PI-205 Electromagnetism (L2-T1-P0-CH3-CR3)

Electrostatics in vacuum: Coulomb's law, Electric field due to a system of charges, Field lines, flux and Gauss's law, Gauss's law in differential form, the electric dipole and its electric field and potential, the couple and force on, and the energy of, a dipole in an external electric field, Gauss's law in integral form, field and potential due to surface and volume distributions of charge, force on a conductor, the capacitance of parallel plate, cylindrical and spherical capacitors, electrostatics in the presence of dielectric media, Modification to Gauss's law, polarisation, the electric displacement, relative permittivity, capacitance and energy in the presence of dielectric media,

Magnetic effects in the absence of magnetic media: the B-field, steady currents: the B-field set up by a current, the Biot-Savart law, the force on a current carrying conductor and on moving charges in a B-field, the magnetic dipole and its B-field, the force and couple on, and the energy of, a dipole in an external B-field, energy stored in a B-field, Gauss's law in integral form, simple cases of the motion of charged particles in electric and magnetic fields

Textbooks:

1. Griffith, D. J., *Introduction to Electrodynamics*, 3rd edition, (Prentice-Hall of India, 1999)
2. Purcell, E. M., *Electricity and Magnetism*, Berkely Physics Course, Vol. 2 (McGraw-Hill, 1965)
3. Matveev, A.N., *Electricity and Magnetism*, (Mir Publishers, 1986)

PI-214 Electronics (L2-T1-P0-CH3-CR3)

Network Theorems: Kirchhoff's laws, nodal analysis, mesh analysis, source transformations, linearity and superposition, Thevenin's and Norton's theorems, maximum power transfer theorem, Star-Delta and Delta-Star conversion,
Introduction to three-phase circuits, Two-port n/w, Z-parameter, Y-parameter, transmission (ABCD) parameter, hybrid (H) Parameter, interconnection of two-port n/ws, T and π representation, Wheatstone bridge and its applications to Wein bridge and Anderson bridge,

Semiconductors: p and n type semiconductors, energy level diagram, mobility and conductivity, transport phenomenon due to donor and acceptor impurities, Fermi level, Hall effect, conductivity measurement,

Diodes: barrier formation in p-n Junction diode (simple idea), current flow mechanism in forward and reverse biased diode (recombination, drift and saturation of drift velocity), derivation of equations for barrier potential, barrier width and current for Step Junction, p-n junction and its characteristics, static and dynamic resistance, diode equivalent circuit, ideal diode, load line analysis of diodes and Q-point,

Two-terminal devices and their applications: (1) rectifier diode, half-wave rectifiers, centre-tapped and Bridge full-wave rectifiers, calculation of ripple factor and rectification, efficiency, qualitative idea of C, L and π –filters; (2) wave shaping circuits; (3) Zener diode and voltage regulation; (4) photo-diode; (5) varactor diode,

Bipolar junction transistors, n-p-n and p-n-p transistors, characteristics of CB, CE and CC configurations, current gains α, β and γ and relations between them, load line analysis of transistors, DC load line and Q-point, physical mechanism of current flow; active, cutoff, and saturation regions, transistor in active region and equivalent circuit,

Amplifiers: transistor biasing and stabilization circuits, fixed bias and voltage divider bias, transistor as 2-port Network, h-parameter equivalent circuit, analysis of a single-stage CE amplifier using hybrid model, input and output impedance; current, resistance, voltage and power gains; class A, B, and C amplifiers; coupled amplifiers: RC-coupled amplifier and its frequency response of voltage gain, feedback in amplifiers, effects of positive and negative feedback on input impedance, output impedance and gain; stability, distortion and noise.

Sinusoidal oscillators: Barkhauson's criterion for self-sustained oscillations, RC phase shift oscillator, determination of frequency, Hartley oscillator, Colpitts oscillator,
Non-sinusoidal oscillators: astable and monostable multivibrators,

Junction field effect transistors (JFETs): principle of operation and characteristics, biasing, small signal models, small signal analysis, advantages of JFET

PI-325 Thermodynamics and Statistical Physics (L2-T1-P0-CH3-CR3)

Macroscopic description of the state, extensive and intensive variables, temperature, thermodynamic variables (pressure, temperature, etc.), thermal equilibrium, equation of state,

Thermal conductivity, zeroth law of thermodynamics, temperature scales; work, heat and internal energy, the Gibbs-Duhem relation,
Thermodynamic processes: reversible, irreversible, quasi-static, adiabatic, isothermal,

First law of thermodynamics, specific heat capacity, enthalpy, kinetic theory of gases and Maxwell-Boltzmann statistics; calculation of pressure, kinetic interpretation of temperature, mean free path, Maxwell's distribution, equi-partition of energy; heat engines,
The second law of thermodynamics, Carnot cycle and Kelvin temperature scale, Clausius' theorem, entropy and its physical interpretation, entropy change for simple processes,
Free energies: Helmholtz free energy, Gibbs free energy, Legendre transformations, conditions of equilibrium, Maxwell's relations, phases and phase transitions, equilibrium between two-phases, general equilibrium conditions, the Clausius-Clapeyron equation,

phase transformation of substances, Van der Walls gas and the liquid gas transition, thermodynamics of magnetic systems, The third law of thermodynamics,

Microscopic versus macroscopic points of view, kinetic theory of gases, concept of ensembles, micro-canonical, canonical, grand-canonical ensembles, partition function, postulates of classical statistical mechanics, derivation of thermodynamics from statistical mechanics principles, equation of state for ideal and real gases, Gibbs paradox

Textbooks:

1. Callen, H. B., *Thermodynamics and Introduction to Thermostatistics,* 2nd edition, (Wiley Student Edition)
2. Reif, F., *Fundamentals of Statistical and Thermal Physics,* (Tata McGraw-Hill, 1985)
3. Zemansky, M. W. and Dittman, R. H., *Heat and Thermodynamics,* 7th edition, (Tata McGraw-Hill International, 2007)

PI-208 Physics Laboratory-III (L0-T0-P4-CH8-CR4)

1. To determine the resistivity of the given semiconductor sample by Four Probe method.
2. To determine the susceptibility of the given sample by Quince tube method
3. To determine the Planck constant using different wavelength of light using Planck constant kit.
4. To study interference and diffraction with a laser beam at a single slit, double slit, three slits and four slits, and measure the slit separations.
5. To measure the spot size of a beam from a He-Ne laser and a diode laser and to calculate the M parameter.
6. To study the p-n junction characteristics and obtain output voltage at different frequencies.
7. To study connector losses in optical fibers:
    a. loss due to diameter mis-match,
    b. loss due to lateral off-set,
    c. loss due to angular misalignment
8. To measure the refractive index of a sample with a Michelson interferometer.
9. Determination of the focal length and hence the power of a convex lens by displacement method on an optical bench.
10. To find out the velocity of ultrasonic waves in a medium using ultrasonic interferometer.

Semester V

PI-315 Mathematical Physics-II (L2-T1-P0-CH3-CR3)

Ordinary differential equations, second-order homogeneous and inhomogeneous equations, Wronskian, general solutions; adjoint of a differential equation, ordinary and singular points, series solution; Legendre, Hermite, Laguerre and the associated polynomials, their differential equations, generating functions; Bessel functions, spherical Bessel equations, integral representation of special functions, Generating functions; Recurrence relations; Rodrigue's formulae and orthogonality of the special functions; Sturm Liouville problem, elements of hyper-geometric functions, Gauss hyper-geometric and confluent hyper-geometric equations, Dirac delta function, Green function,

Partial differential equations in physical problems: Laplace's equation, Poisson's equation, Heat flow equations, Wave equations, Helmholtz equations; solutions of these equations; eigenvalue problems, boundary value problems, method of separation of variables,

Integral transforms: Laplace transform, Hankel transform, Mellin transform, Fourier transform,

Properties of Laplace and Fourier transforms, application of Laplace and Fourier transforms

Textbooks:
1. Harper, C., *Introduction to Mathematical Physics, (*Prentice Hall, 2009)
2. Arfken, G. B., and Weber, H. J., *Mathematical Methods for Physicists*, (Elsevier Ltd, Oxford, 2005)
3. Spiegel, M. R., *Vector Analysis*, Schaum's outline series, (Tata McGraw-Hill 1979)

Reference Books:
1. Morganeau, H. and Purphy, C. M., *The Mathematics of Physics and Chemistry,* (Young Press, 2009)

PI-202 Introductory Quantum Mechanics (L2-T1-P0-CH4-CR3)

Origin of quantum theory, inadequacy of classical ideas, Planck's quantum hypothesis, photoelectric effect, Compton scattering,

Wave-particle duality, deBroglie's hypothesis, experimental evidence for deBroglie's hypothesis, Davisson-Germer experiment, Thompson experiment,

Simple consequences of uncertainty relation, wave function and its probabilistic interpretation, wave packet and uncertainty relation,

Schrodinger equation, solution of one-dimensional Schrodinger equation for an infinite square well potential, reflection and transmission at potential steps, qualitative treatment of barrier penetration for simple rectangular barriers,

The quantum harmonic oscillator

Textbooks:
1. Schiff, L. I., *Quantum Mechanics,* 3rd edition, (McGraw-Hill, New Delhi, 1968)
2. Ghatak, A. and Lokanathan, S., *Quantum Mechanics*, 5th edition, (Macmillan, 2004)

Reference Books:
1. Merzbacher, E., *Quantum Mechanics*, 2nd edition, (John Wiley, New York, 2005)
2. Richtmyer, F. K., Kennard E. H. and Lauritsen, T., *Introduction to Modern Physics,* 5th edition, (McGraw-Hill, 1976)
3. Waghmare, Y. R., *Fundamentals of Quantum Mechanics,* 1st edition, (Wheeler publishing, 1996)
4. Mathews, P. M. and Venkatesan, K., *A Textbook of Quantum Mechanics*, 2nd edition, (Tata McGraw-Hill, 1976)

PI-204 Atomic and Nuclear Physics (L2-T1-P0-CH3-CR3)

Atomic Physics: The Bohr model of the hydrogen-like atom, brief account of the Sommerfeld model, electron spin; Stern-Gerlach experiment, space and spin quantization, the vector model of the atom, spin-orbit interaction, fine structure of spectral lines, LS and jj coupling, the Zeeman effect, Paschen-Back effect, Stark effect, scattering of light: Rayleigh scattering formula, colour of the sky, polarisation of the scattered light,

Nuclear Physics: General properties of nuclei, concept of nuclear size, spin, parity, magnetic dipole moment and electric quadropole moment of nuclei, nuclear forces and stability of nuclei, concept of packing fraction and binding energy, binding energy curve and its significance,

Natural radioactivity and radioactive decay: Type of radioactive decays, theory of radioactive disintegration, radioactive constants, mean-life of a radio element, radioactive equilibrium, half-life of a radio element, determination of decay constant and half-life,

Nuclear reactions: Types of nuclear reactions, conserved quantities of nuclear reaction, energies of nuclear reaction, Q-value, exoergic & endoergic reactions, nuclear fusion and fission reactions,

Detectors: Principles of detection of charge particles, construction and working principle of gas-filled detectors, ionization chamber, its construction and working principle, interaction of γ-particle with matter, construction and working principles of a scintillating detector

Textbooks:
1. Krane, K. S., *Introductory Nuclear Physics*, (John Wiley, New York, 1987)
2. White, W. H., *Introduction to Atomic Spectra*, (McGraw-Hill, 1934)

Reference Books:
1. Green, A. E. S., *Nuclear Physics*, (McGraw-Hill Book Company, Inc., New York, 1955)
2. Srivastava, B.N., *Basic Nuclear Physics and Cosmic Rays,* (Pragati Prakashan, Meerut, 2011)

PI-316 Introduction to Photonics (L2-T1-P0-CH3-CR3)

Gaussian beam, ABCD matrix formulation, propagation of Gaussian beam through optical components,

Propagation of light in free space, optical Fourier transform, diffraction of light, propagation of light through a lens and conditions for Fourier transformation and imaging, holography

Electromagnetic theory of light, monochromatic electromagnetic waves and their propagation in a dielectric medium, Fresnel reflection and transmission coefficients,

Absorption and dispersion, pulse propagation in a dispersive medium,

Planar dielectric waveguides, two-dimensional waveguides, optical coupling in waveguides,

Step-index fibers, graded –index fibers, attenuation and dispersion,

Nonlinear optical media, second-order nonlinear optics, third-order nonlinear optics, three-wave mixing, four-wave mixing, optical solitons,

Principles of electro-optics, electro-optics of anisotropic media, electro-optics of liquid crystals, photorefraction, electro-optic devices,

Interaction of light and sound in matter, acousto-optic devices, acousto-optics of anisotropic media

Textbooks:

1. Meschede, D., *Optics, Light and Lasers*, (Wiley-VCH Verlag, 2007)
2. Smith, F. G., King, T. A. and Wilkins, D., *Optics and Photonics*, 2nd edition, (John Wiley and Sons, 2007)

Reference Book:

1. Saleh, B. E. A. and Teich, M. C., *Fundamentals of Photonics*, (John Wiley and Sons, 1991)
2. Kasap, S. O., *Optoelectronics and Photonics: Principles and Practices*, 2nd edition (Pearson, 2013)

PI-303 Physical and Geometrical Optics (L2-T1-P0-CH3-CR3)

Basic Geometric Optics: law of reflection; reflection from planar and curved surfaces; Snell’s law; refraction at the planar and curved surfaces; thin lens; prisms

Matrix methods: matrix optics concepts and basic matrices; cascading matrices: thin lens, thick lens, principal planes and imaging; study of a compound lens

Aberrations: monochromatic and chromatic aberrations; Seidel aberrations: spherical aberration, coma, astigmatism, field curvature and distortion; chromatic aberrations; examples

Polarization: light as a transverse wave, linear and circular polarizations; methods of producing and analyzing polarized light; linear polarizers and wave plates; Fresnel reflection and transmission coefficients; total internal reflection; Jones vectors and matrices for the ploarizer and wave plate; Stokes vectors and Muller matrices

Interference: division of wavefront and amplitude; intensity distribution in an interference pattern; visibility of fringes; Young's double-slit interferometer; Michelson interferometer; Rayleigh interferometer; multiple beam interference: Fabry-Perot etalon and interferometer; resolving power

Diffraction: Fresnel-Huygens theory of diffraction; Fresnel and Fraunhofer regions of diffraction; diffraction at a straight edge; Fraunhofer diffraction at the slit, circular and rectangular apertures; resolving power of a telescope; diffraction at multiple slits, grating, resolving power of a grating

Holography: recording and reconstruction of a wave; characteristics of the diffracted waves from the hologram; diffraction efficiency; types of the holograms; zone plate analogy of the hologram

Fourier Optics: simple concepts

Textbooks:

1. Subrahmanyam, N., Lal, B. and Avadhanulu, M. N., *A Textbook of Optics*, (S. Chand & Co. Ltd., 2012)
2. Mathur, B. K. and Pandya, T. P., *Principles of Optics*, (Tata McGraw-Hill International, 1981)
3. Chakraborty, P. K., *Geometrical and Physical Optics*, 3rd edition, (New Central Book Agency (P) Ltd., 2005)

Reference Books:

1. Hecht, E., *Optics*, 4th Edition, (Addison-Wesley Pub. Co., 2001)
2. Born, M. and Wolf, E., *Principles of Optics*, 7th edition, (Pergamon Press Ltd, 2000)
3. Jenkins, F. A. and White, H. E., *Fundamentals of Optics*, 4th edition, (Tata McGraw-Hill International, 1981)
4. Sirohi, R. S., *Wave Optics and Applications*, (Orient Longman, 1993)

PI-399 Physics Laboratory-V (L0-T0-P4-CH8-CR4)

1. To find out the magneto-resistance of the semiconductor sample as a function of magnetic field and to plot the graph between magnetic field vs. potential developed using magneto-resistance set-up.
2. To plot the gain – bandwidth relation for a negative feed back amplifier using IC 741.

3. To find out the Curie temperature of the given ferromagnetic material ($BaTiO_3$) using Curie temperature kit.
4. To study Malus' law of polarization.
5. To measure optical nonlinearity using z-scan method.
6. To find out the value of Boltzmann constant using Boltzmann Constant kit.
7. To find out the Rydberg constant by observing the Balmer series of Hydrogen using spectrophotometer.
8. To study diffraction at a circular aperture and find the resolving power of a given lens used as an objective of a telescope.
9. a. Develop a clipping and a clamping circuit and determine the output voltage with different DC bias voltage applied.
   b. Design and develop a full wave and a half wave rectifier circuits and find out the ripple factor of the circuits.
10. To study the temperature dependence of Hall coefficient of a semiconductor sample using Hall effect set-up.

Semester VI

PI-307 Basic Material Science (L2-T1-P0-CH3-CR3)

Fundamentals of crystallography: Bravais lattice, unit cell, crystal systems, Miller indices of crystal planes and directions, point groups.
Typical crystal structures: Simple (sc) cubic, body centered (bcc) cubic and face centered (fcc), cubic and structures, Hexagonal closed packed (hcp), Diamond and Zinc blende (ZnS) closed packed structures, packing factors, NaCl, CsCl and cubic perovskite and wurtzite structures.
Structure of solids: linear and planar density, ligancy, packing efficiency, closed pack planes and directions, voids.

Crystal imperfections*:* point imperfections (vacancies and interstitials), Frenkel and Schottky defects, dislocations, grain boundary, grain growth and surface energy calculation.

Crystal binding: Primary and secondary bondings, bond length and bond energy, van der Waals bonding, inert gas crystals, ionic, covalent and metallic bondings, Madelung constant, Madelung energy.

Phase and phase transformation: Melting point of crystalline and amorphous solids, degrees of freedom, phase rule, binary alloys, nucleation and phase transformation.

Elastic properties, Young, bulk and rigidity moduli, yield stress, Poisson’s ratio, compressibility, creep and fatigue, plasticity.

Diffusion*:* Fick’s first and second laws, thermal diffusion.

Textbooks:

1. Callister, W. D., *Materials Science and Engineering*, 5^{th} edition (John Wiley, 2000)
2. Raghavan, V., *Materials Science and Engineering,* 4^{th} edition (Prentice Hall India, 1991)

5. Azaroff, L. V., *Introduction to Solids*, (Tata McGraw-Hill, 1977)
6. Mathur, D. S., Properties of Matter, (S. Chand & Co., 2010)

PI-317 Computational Methods in Physics (L2-T1-P0-CH3-CR3)

Introduction to computers

Programming using FORTRAN; programming using C and C++

Simple programming examples from calculus; solution of simple algebraic equations, solution of simple differential equations

Examples of least squares curve fitting, matrix eigenvalue problems

Textbooks:
1. Gottfried**,** B. S**.,** *Schaum's outline of theory and problems of programming with C***,** (McGraw-Hill Professional, 1996)
2. Kanetkar, Y., *Let us C,* (BPB *Publications,* 2012)
3. Mayo, W. E. and Cwiakala, M., *Schaum's Outline of Programming With Fortran 77*, Schaum's Outline series, (McGraw-Hill, 1995)
4. Scheid, F., *Schaum's outline of theory and problems of numerical analysis*, 2nd edition, Schaum's outline series, (McGraw-Hill, 1989)

Reference Books:
1. Mathews, J. H., *Numerical Methods for Mathematics, Science and Engineering*, (Prentice Hall, 1997)
2. Narsingh Deo, *System Simulation with Digital Computers*, (Prentice Hall, 1979)

PI-308 Laser Physics (L2-T1-P0-CH3-CR3)

Planck's Law; Absorption, spontaneous emission and stimulated emission; Einstein's A & B coefficients; two-level atomic systems; light amplification; threshold condition;

Line broadening mechanism; pumping methods and laser rate equations; variation of laser power around threshold; optimum output coupling;

Modes of a rectangular cavity and open planar resonator; the quality factor (Q-factor); the ultimate bandwidth of laser; mode selection; Q-switching; mode locking; modes of a confocal resonator; general spherical resonator;

Properties of laser beam; propagation of Gaussian beam and ABCD matrix;

Some laser systems like He-Ne laser; ruby laser; neodymium-based lasers; CO_2 laser; dye laser; fiber laser, semiconductor laser; DFB lasers; DH lasers,

Generation of ultra fast optical pulses; pulse compression; femto-second laser and its characteristics

Some applications of lasers like laser cooling, laser tweezers, material processing

Textbooks:

1. Ghatak, A. K. and Thyagarajan, K., *Optical Electronics*, (Cambridge University Press, 2009)
2. Svelto, O., *Principles of Lasers*, 3rd edition, (Springer, 2007)
3. Milonni, P. W. and Eberly, J. H., *Laser Physics*, (John Wiley & Sons, 2010)

Reference Books:

1. Yariv, A., *Quantum Electronics*, 3rd edition, (Wiley Eastern Ltd.)
2. Davis, J. H., *Introduction to Low Dimension Physics*, (Cambridge University Press, 1997)
3. Siegman, A. E., *Lasers*, (University Science Books, 1986)

PI-311 Waves and Acoustics (L2-T1-P0-CH3-CR3)

Vibrations: Potential energy vs. displacement relation, concept of equilibrium, development of simple harmonic oscillation (SHO) and other anharmonic terms from force equations, damped oscillation, critical damping, Q-factor of an oscillator, forced vibration, resonance, low and high frequency responses, eigen frequency and normal modes, energy transfers between modes, coupled pendulum, Lissajous figures, anharmonic oscillator, Fourier series and Fourier coefficients, Fourier analysis in some simple cases,

Waves: Progressive wave in one-dimension and in three-dimensions, wave equation, plane wave and spherical wave, intensity, dispersion, group velocity, phase velocity, speed of transverse waves in a uniform string, eigen frequencies and eigen modes for plucked and struck strings, speed of longitudinal waves in a field, energy density and intensity of waves,
Superposition of waves: Superposition principle, interference in space and energy distribution, beats, combinational tones, production, detection and applications of ultrasonic waves, Doppler effect, shock waves,

Acoustics: Vibrations in bounded system, normal modes of a bounded system, harmonics, quality of sound, noise and music, intensity and loudness, bel and phon, principle of sonar system, acoustic transducers and their characteristics, recording and reproduction of sound, measurement of velocity, frequency and intensity, acoustics of halls, reverberation and Sabines formula

Textbooks:

1. Chattopadhyay, D., *Vibration, Waves and Acoustics*, (New Central Book Agency, 2010)
2. Main, I. G., *Vibrations and Waves in Physics,* 2nd edition (Cambridge University Press, 1984)

Reference Books:

1. Randall, R. H., *An Introduction to Acoustics*, Sect. 7-21, 7-22, (Addison-Wesley, 1951)
2. Wood, A. B., *A Textbook of Sound*, 3rd Edition, (Bell & Sons, 1955)
3. Crawford, F. S., *Waves*, *Berkeley Physics Course*, Vol. 3, (Tata McGraw-Hill, 1968)
4. Pain, H. I., *The Physics of Vibrations and Waves,* 6th edition (John Wiley & Sons Ltd., 2005)

PI-314 Measurement Physics (L2-T1-P0-CH3-CR3)

Data interpretation and analysis; precision and accuracy, error analysis, propagation of errors, least squares fitting, linear and nonlinear curve fitting, chi-square test;
Measurement of energy and time using electronic signals from the detectors and associated instrumentation, signal processing; multi-channel analyzer; Time of flight technique; coincidence measurements, true-to-chance ratio,

Transducers (temperature, pressure/vacuum, magnetic field, vibration, optical), measurement and control, ionization chamber, proportional counter, GM counters, spark chambers, cloud chamber, semiconductor detectors for charged particles and γ-ray detectors, scintillation counters, photodiodes and charge coupled device (CCD) and CMoS cameras for detection of electromagnetic radiation,

Production of low temperature below 1K, adiabatic demagnetisation and magnetic refrigerator, special properties of liquid helium, temperature below 10^{-6}K, nuclear demagnetisation, measurement of low temperatures,

Op-amp based, instrumentation amp, feedback, filtering and noise reduction, shielding and grounding; Fourier transforms; lock-in detector, box-car integrator, modulation techniques

Textbooks:

1. Sayer, M. and Mansingh, A., *Measurement, Instrumentation and Experiment Design in Physics and Engineering*, (Prentice-Hall India, 2000)
2. Nakra, B. C. and Chaudhry, K. K., *Instrumentation Measurement and Analysis* (Tata McGraw-Hill, 1985)

Reference Books:

1. Knoll, G. F., *Radiation, Detection and Measurement*, 3rd edition, (John Wiley & Sons, 2000)
2. Jones, B. E., *Instrumentation measurement and feedback* (Tata McGraw-Hill, 1978)

PI-300 Project (L0-T0-P4-CH8-CR4)

Semester VII

PI-403 Electrodynamics (L2-T1-P0-CH3-CR3)

Review of Electrostatics and magneto-statics: Electrostatic and magnetostatic fields in matter,
Method of images, boundary value problems, Laplace equation in rectangular, cylindrical and spherical coordinates, multipole expansion,

Gauge transformation, Coulomb and Lorentz gauges, Maxwell's equations, conservation of energy and momentum in electrodynamics, Poynting Theorem, Maxwell's stress tensor,

Wave equation, reflection, refraction and propagation of electromagnetic waves in dispersive media, wave equation in a conducting medium,

Wave-guides and cavity resonance, EM wave propagation of various types of EM modes in different types of wave guides,

Text Books:

1. Griffiths, D. J., *Introduction to Electrodynamics*, (Prentice Hall India, 2009)
2. Jackson, J. D., *Classical Electrodynamics*, 3rd edition, (Wiley, Eastern Ltd, 1998)

Reference Books:

1. Ritz, J. R. and Millford, F. J., *Foundations of Electromagnetic Theory*, (Prentice Hall India)
2. Slater, J. C., and Frank, N. H., *Electromagnetism*, (Dover Publications, 2011)
3. Miah, W., *Fundamentals of Electromagnetism*, (Tata McGraw-Hill, 1982)
4. Feynman, R. P., *Feynman Lecture Series Volume II*, (Addison Wesley Longman, 1970)

PI-413 Advanced Classical Mechanics (L2-T1-P0-CH3-CR3)

Variational Principles: Derivation of Euler-Lagrange differential equation, Hamilton's principle and its deduction, derivation of Lagrange's equation from Hamilton's principle, modified Hamilton's equation (vibrational principle) and derivation of Hamilton's principle from it, principle of least action, method of Lagrange's undetermined multipliers,

Two-body Central Force Problems: Reduction of two-body problems to equivalent one body problem, equation of motion under central force, equation for an orbit, inverse square law of force, Kepler's laws of planetary motion and their deduction, Virial theorem, scattering in a central force field and Rutherford scattering, Canonical Transformations and Brackets: Canonical and Legendre transformations, generating function, procedure for application of canonical transformation, condition for canonical transformation, bilinear invariant condition, integral invariant of Poincaré, Poisson brackets and Lagrange's brackets and their properties, relation between Poisson and Lagrange's brackets, application of Poisson bracket to mechanics, Liouville's theorem,

Hamilton-Jacobi Theory: Hamilton-Jacobi (HJ) equation, Hamilton's characteristic and principal function, HJ equation for Hamilton's characteristic function, solution of Kepler's problem by HJ method, action-angle variable and harmonic oscillator problem, separation of variables in HJ equation, transition from classical to quantum mechanics,

Mechanics of a Rigid Body: Generalised co-ordinates of a rigid body, body and space reference system, Eulerian angles, orthogonal transformations, infinitesimal rotations, kinematics of a rigid body, moving frame of reference, Euler equation, spinning top, gyroscope,

Small Oscillations: One dimensional oscillator; stable, unstable and neutral equilibriums, Normal co-ordinates and normal modes, Two coupled pendulum, double pendulum, vibration of a linear triatomic molecule, general case- system with 'n' degrees of freedom

Text Books:

1. Upadhyaya, J. C., *Classical Mechanics*, (Himalayan Publishing House)
2. Goldstein, H., *Classical Mechanics*, (Narosa Publishing House)

Reference Books:

1. Takawale, R. G. and Puranik, P. S., *Introduction to Classical Mechanics*, (Tata McGraw Hill)
2. Rana, N. C. and Joag, P. S., *Classical Mechanics*, (Tata McGraw Hill)
3. Panat, P. V., *Classical Mechanics*, (Narosa Publishing House)
4. Gupta, S. L., Kumar, V. and Sarma, H. V., *Classical Mechanics*, (Pragati Prakashan)

PI-414 Quantum Mechanics-I (L2-T1-P0-CH3-CR3)

Review of wave-particle duality, uncertainty principle and Schrodinger equation, application of Schrodinger equation to hydrogen atom,

Hilbert space formalism for quantum mechanics, Dirac notation, linear operators, Hermitian operator, projection operators, unitary operators, eigenvalues and eigen vectors of an operator,

Matrix representation of Kets, Bras and Operators, harmonic oscillator and its solution by matrix method,

The basic postulates of quantum mechanics, superposition principle, expectation value, Heisenberg equation of motion, Angular momentum in quantum mechanics, commutation relations, eigen functions of orbital angular momentum, spin angular momentum, Pauli's matrices

Textbooks:

1. Schiff, L. S., *Quantum Mechanics*, (Tata McGraw-Hill Education)
2. Ghatak, A. K. and Lokanathan, S., *Quantum Mechanics: Theory and Applications*, (Springer, 2002)

Reference Books

1. Waghmare, Y. R., *Fundamentals of Quantum Mechanics*, (Wheeler publishing)
2. Mathews, P. M. and Venkatesan, K., *Quantum Mechanics*, (Tata McGraw-Hill Education, 2007)
3. Pauling, L., *Introduction of Quantum Mechanics*, (McGraw-Hill)
4. Dirac, P. A. M., *Principles of Quantum Mechanics*, (Oxford University Press)
5. Kemble, E. C., *The Fundamental principles of Quantum Mechanics*, (McGraw-Hill)

PH-416 Condensed Matter Physics and Materials Science-I (L2-T1-P0-CH3-CR3)

Review of elements of crystallography and typical crystal structures, Crystal diffraction, reciprocal lattice, atomic form factor, structure factor and Debye-Waller factor, x-ray, electron and neutron diffractions,

Lattice vibration in solids: Enumeration of modes, monoatomic linear chain, infinite and finite boundary conditions, dispersion relation, diatomic chain, acoustical and optical modes, quantization of lattice vibrations (phonons),

Einstein and Debye theory of specific heat of solids, free electron theory of metals, electronic specific heat, electrical conductivity, thermal conductivity, Wiedemann-Franz law,

Motion of electrons in periodic potential, Bloch theorem, Kronig Penney model, band theory of solids, Brillouin zones; insulators, semiconductors and metals, Fermi surface, holes, intrinsic and extrinsic semiconductors, concept of effective mass and law of mass action, Hall effect and magnetoresistance,

Inelastic neutron scattering, analysis of data by generalized Ewald construction, dispersion relations, frequency distribution function, thermal conductivity of insulators, Normal and umklapp processes, crystal imperfections, colour centres, linear and edge dislocations, Bergers' vector, thermo-luminescence

PI-400 Physics Laboratory-VII (L0-T0-P5-CH10-CR5)

1. To design and fabricate a phase shift oscillator for the given frequency and to study the output using Op-Amp. 741/ 324 / 325.
2. Determination of thermal conductivity of a substance by Lee's method.
3. Scintillation counter:
   a. Find out the resolution and the FWHM of the given Scintillation counter
   b. Find out the gamma ray energy of the given radioactive sources
4. Determination of the Young's modulus of a beam by four-point bending.
5. To determine the velocity of sound in (a) dry air, and (b) rods by Kundt's tube method
6. Calculate the difference in wavelength between atomic transition lines and Zeeman lines using Zeeman effect set-up. (SES instruments Pvt. Ltd).
7. To study Talbot imaging and to obtain Talbot distances with moiré interferometry and to measure the focal length of a lens.
8. Determination of the boiling point of a liquid by platinum resistance thermometer and metre-bridge.
9. To measure the diameter of a thin wire using (a) interference, and (b) diffraction and compare the results.
10. To measure the dielectric constant and loss using microwave bench.

PI-499 Physics and Computational Laboratory-VI (L0-T1-P3-CH7-CR4)

Numerical Analysis: Solution of non-linear equations - Newton's method, method of false position (regular falsi); solution of a system of linear equations - Gaussian elimination, iterative methods (Jacobi and Gauss-Seidel methods); Interpolation - Newton's interpolation formula; numerical differentiation and integration - Simpson's rule, trapezoidal rule, quadrature formula; numerical solution of ordinary differential equations - Euler's method, Runge-Kutta method; fitting of curves - principle of least squares,

Simulation: A system and its model; he basic nature of simulation; the simulation of continuous and discrete systems - suitable examples; stochastic simulation - generation of random numbers with different probability distributions; examples of simulation in physics

Textbooks:

1. Mathews, J. H., *Numerical Methods for Mathematics, Science and Engineering*, (Prentice Hall, 1997)
2. Narsingh Deo, *System Simulation with Digital Computers*, (Prentice Hall, 1979)

Reference Books:

1. Yashwant Kanetkar, *Let us C,* (BPB *Publications***,** 2012)
2. Gottfried, B .S., *Schaum's outline of theory and problems of programming with C,* (McGraw-Hill Professional, 1996)

PI 499/ PH 400 Computational Laboratory --

a. To find mean, variance, standard deviation, moments etc. for a given set of data (about 50 entries)
b. To fit a linear curve for a given set of data
c. To perform a polynomial fit for a given set of data
d. To find the roots of a quadratic equation
e. Fourier Analysis of a square
f. To generate random numbers between 1 and 100.
g. To perform numerical integration of 1-D function using Simpson and Weddle rules
h. To find determinant of a matrix, its eigenvalues and eigen vectors
i. To simulate phenomenon of nuclear radioactivity using Monte Carlo technique.

Semester VIII

PI-302 Digital Electronics and Microprocessors (L2-T0-P1-CH4-CR3)

Digital Electronics: Number systems, binary codes, logic gates, INHIBIT (ENABLE) operation,
Boolean Algebra: logic operations using De Morgan's laws and other laws, K-maps
Combinatorial digital systems: gate assemblies, binary adders/subtractors, arithmetic functions, decoder, demultiplexer, data selector/multiplexer, encoder, ROM and applications.,

Sequential digital systems: flip-flops, shift registers and counters logic families and their comparison,
D/A and A/D systems: digital-to-analog converters, analog-to-digital converters, character generators,
Memories: RAM, dynamic RAM, PAL, magnetic memories, MOS ROM,

Microprocessors: 8085 microprocessor: programmers model: register structure, addressing modes and assembly languages, 8086/8088 microprocessor: Architecture of 8086/8088, segmented memory, addressing modes, assembly language instruction, assembler, linkers and software development tools, debugging an 8086/8088 system and microprocessor development systems,
CPU model design: 8086/8088-clock generation, timing diagram analysis, CPU module design in minimum and maximum mode,

Memory system design: Address decoding technique, static RAM interfacing, dynamic RAM (DRAM): refreshing techniques, interfacing and DRAM controller, direct memory access (DMA), input/output (I/O) design: Isolated I/O, memory mapped I/O, design of parallel I/O, serial I/O, interrupt driven I/O and DMA, Peripherals: Programmable interrupt controller (8259), programmable peripheral interface (8255), serial communication (8251), programmable timer and event counter (8254) and DMA controller (8257), Introduction to x86: Architecture, operating modes (real, protected and virtual), memory management and protection, overview of advanced processor (P-I to P-IV), micro-controllers and their interfacing,

Digital and Microprocessor laboratory: Digital experiments based on the course structure and preliminary assembly language programming for 8085/8086 microprocessor

Textbooks:

1. Kumar, A., *Fundamentals of Digital Electronics*, (PHI Learning Pvt. Ltd., 2003)
2. Gaonkar R. S., *Microprocessor Architecture, Programming, and Applications with the 8085*, 5th edition, (Prentice Hall, 2002)

References Books:

1. Malvino A. P. and Leach D. J., *Digital Principles and Applications* (Tata McGraw- Hill 1994).
2. Milliman, J. and Halkias, C. C., *Integrated Electronics,* (Tata McGraw Hill, 2003)
3. Tocci R. J., *Digital Systems* (Pearson/Prentice Hall, 2004)
4. Bartee T. C., *Digital Computer Fundamentals* (Tata McGraw-Hill Publishing Company, 1985)

PI-310 Statistical Physics (L2-T0-P1-CH4-CR3)

Review of thermodynamics: The laws of thermodynamics, free energies, phase transitions and the conditions for phase equilibrium, kinetic theory of gases, Maxwell's velocity distribution, equipartition of energy,

Basic principles of statistical mechanics and its application to simple systems: Harmonic oscillators, two level systems etc.,
Probability theory: Random variable, random walk problem in 1-D, probability distribution function, Central limit theorem,

Classical statistical mechanics: Phase Space, dynamics in phase space, ergodic hypothesis, stationary states and Liouville theorem; basic principles of equilibrium, Fundamental postulate: Postulate of equal apriori probability, microscopic versus macroscopic points of view, concept of ensembles, micro-canonical, canonical and grand-canonical ensembles, counting and partition function, density of states,
Classical partition function: Harmonic oscillator, particle in a box, two-state system, equipartition theorem, virial theorem, derivation of thermodynamics, equation of state for ideal and real gases, Gibbs paradox,

Thermodynamic averages: The partition function, generalised expression for entropy, Gibbs entropy, free energy and thermodynamic variables, the grand partition function, grand potential and thermodynamic variables,
Examples of non-interacting systems: Einstein and Debye model, ideal paramagnet, energy fluctuations in canonical ensemble, thermodynamic function, inadequacy of classical theory, derivation of van der Waals' equation from classical theory,

Quantum statistical mechanics: Density matrix and its physical significance, quantum Liouville equation,
Quantum distributions: Bosons and Fermions, grand potential for identical particles, the Fermi and Bose distributions,
The classical limit: The Maxwell distribution, black-body radiation, ideal Fermi and Bose gas, equation of state, diamagnetism, de Hass van Alphen effect, Pauli paramagnetism and negative temperature, photons, phonons, Bose-Einstein condensation and Fermi gas at low temperatures, Neutron stars, interacting gases, van der Waals equation for non-ideal gas,

Critical phenomena and phase transitions: Phase diagrams, order of phase transitions and order parameter, conserved and non-conserved order parameters, transfer matrix method, mean field theory, Curie-Weiss theory, Landau theory, critical point and critical exponents, scaling theory and scaling of free energy, symmetry breaking, distinction between second-order and first-order transitions, discussion of ferroelectrics, symmetry, broken symmetry, Goldstone bosons, fluctuations, scattering, Ornstein-Zernike equation, soft modes,

Strongly interacting systems: Introduction to the Ising model, magnetic case, transfer matrix method in 1-D, Heisenberg and XY models, Ising Model of Magnetism, lattice gas and phase separation in alloys and Bragg-Williams approximation, properties of liquid Helium II, Tisza's two-fluid model, superfluidity, first and second sound, Landau's theory of superfluidity

Textbooks:

1. Pathria, R. K., *Statistical Mechanics*, 2nd edition, (Butterworth Heinemann, 1996)
2. Huang, K., *Statistical Mechanics,* 2nd edition (Wiley, 1987)
3. Reif, F., *Statistical Physics,* (Tata McGraw-Hill, 2008)

Reference Books:

1. Landau, L. D. and Lifshitz, E. M., *Statistical Physics,* 3rd edition (Butterworth-Heinemann, 1980)
2. Stanley, H. E., *Introduction to Phase Transitions and Critical Phenomena* (Oxford University Press, 1971)
3. Yeomans, J., *Statistical Mechanics of Phase Transitions*, (Oxford University Press, 1992)
4. Chandler, D., *Introduction to Modern Statistical Mechanics*, (Oxford University Press, 1979)

PI-402 Nuclear and Particle Physics (L2-T0-P1-CH4-CR3)

Basic nuclear properties: Nuclear size determination from electron scattering, nuclear form factors, nuclear radius and charge distribution, mass and binding energy, angular momentum, parity and symmetry, magnetic dipole moment and electric quadrupole moment,

Bound state problem: properties of deuteron, Schrodinger equation and its solution for ground state of deuteron, rms radius and tensor forces, magnetic and quadrupole moments of deuteron,

Scattering problem: low energy n-p scattering and its spin dependence, effective range theory, scattering length, spin dependence (ortho & para-hydrogen), low energy p-p scattering, nature of nuclear forces, charge independence, charge symmetry and isospin formalism, evidence for saturation property, exchange character,

Fermi's theory of beta decay, Curie' Plot, electron capture, selection rules for Fermi and Gamow-Teller transitions, parity violation in -decay and Wu's experiment, two-component theory of neutrinos, neutrino helicity, concepts of neutrino mass and oscillation (solar and atmospheric neutrino puzzles), Reins and Cowen experiment, concept of double beta decay and Majorana neutrino, radioactive dating,

Evidence of shell structure, magic numbers, effective single particle potentials – square well, harmonic oscillator, Wood-Saxon with spin orbit interaction, extreme single particle model and its successes and failures in predicting ground state spin, parity, Nordheim rule,

Different types of nuclear reactions: fission, fusion, Breit-Wigner dispersion formula,

Nuclear radiation detectors: GM counter, proportional, scintillation, solid state detectors, electrostatic accelerators, cyclotron, synchrotron, linear accelerators, colliding beam accelerators,

Particle Physics: Symmetries and conservation laws, quantum numbers, strange mesons and baryons, hadron classification by isospin and hypercharge, SU(2) and SU(3), CPT theorem, CP violation in K decay, Gell-Mann Nishijima relation, quark model, coloured quarks and gluons, quark dynamics,

PH-417 Advanced Mathematical Physics (L2-T1-P0-CH3-CR3)

Linear equations of homogeneous and inhomogeneous types, linear vector spaces, scalar product, linear independence, change of basis, Schmidt orthogonalisation; special matrices, diagonalization, orthogonal and unitary transformations; functions of complex variables, limit, continuity, analytic function, Cauchy formula, Laurent series, isolated and essential singularities; Contour integrations, conformal transformations

Complex variables: Complex algebra; graphical representation; analytical functions; Cauchy-Riemann conditions; complex integrations; Cauchy's theorem; Cauchy's integral formula; residue; Cauchy's residue theorem,

Tensor analysis: Tensor in three and/or four dimensions; rank of tensors; covariant and contravariant tensors; symmetric and antisymmetric tensors; metric tensors, mathematical operations involving tensors,

Group theory: Group representation; reducible and irreducible representation; unitary group; special unitary group; Lorentz group; rotation group; direct product; Young Tableau, Dynkin diagrams

Textbooks:

1. Joshi, A. W., *Group Theory for Physicists,* (Wiley Eastern, 2008)
2. Brown, J. W. and Churchill, R. V., *Complex Variables and Applications*, 6th edition, (McGraw-Hill International, 1996)
3. M R Spiegel, S Lipschutz, J J Schiller and D Spellman, *Schaum's Outline of Complex Variables*,
4. Ablowitz, M. J. and Fokas, A. S., *Complex Variables, 1st South Asian paperback edition, (Cambridge University Press, 1998)*
5. Joshi, A. W., *Matrices and Tensors in Physics*,
6. Hoffman, K. and Kunze, R., *Linear Algebra*, (Prentice Hall India)

PI-498 Physics Laboratory-VIII (L0-T0-P4-CH8-CR4)

1. Electron spin resonance spectrometer:

a. To find out the Lande' g – factor of 2,2-Diphenyl-1-picrylhydrazyl sample using ESR spectrometer.
b. To observe the E.S.R. signal of given sample (DPPH) and to measure its full width at half maximum (FWHM).

2. GM counter:
   a. Determine the resolving time of the GM counting system.
   b. Study and determine the statistical distribution low that governs nuclear decay.
   c. Determine the characteristics of a GM tube to study the variations of count rate with applied voltage and thereby determine the plateau, the operating voltage and the slope of the plateau.
   d. Determine the dead time of the GM tube using a single source.
3. To determine the coercivity, saturation magnetization and retentivity of different given samples using hysteresis loop tracer set-up.
4. To measure the impedance of a coaxial cable and a rectangular waveguide using microwave bench.
5. Determine the dielectric constant of the ferroelectric ceramic sample using the given experimental set-up.
6. Determine the electrical charge of an electron by Millikan oil drop experiment and determine the value of e/m.
7. To study response of a non-linear crystal as a function of intensity of Nd:YAG laser (532nm)
8. a. To plot intensity of Luminescence vs. Temperature glow curve using thermo-luminescence set-up.
   b. To draw the glow curve and find out the activation energy (E) of different Alkali Halide Crystals using thermo-luminescence set-up (Demonstration only)
9. To study, take a measurement and prepare a report on
   a. PL/UV-VIS Spectrophotometer
   b. Scanning Electron Microscope (SEM)
   c. X-Ray Difractometer (XRD)

PI-450 Seminar (L0-T0-P2-CH4-CR2)

Semester IX

PI-500 Project-I (L0-T0-P4-CH8-CR4)

PI-551 Advanced Electrodynamics (L2-T1-P0-CH3-CR3)

Radiation: Retarded potentials, Hertzian dipole, antennas and arrays, half-wave dipole, Loop current element, Lenard-Wiechert potentials and electromagnetic fields of a moving point charge, electric and magnetic dipole radiations, power radiated by a moving point charge, motion of charged particles in electromagnetic fields, Cherenkov radiation, transmission lines, impedance of line, scattering and diffraction,

Four vectors, relativistic electrodynamics, field tensor, energy-momentum tensor, interdependence of electric and magnetic fields, transformation of electromagnetic fields under Lorentz transformation, invariance of Maxwell's equations, Lagrangian for electromagnetic fields, Maxwell's equations from least action principle

Textbooks:

1. Jordan, E. K. and Balmain, K. G., *Electromagnetic waves and Radiating systems*, (Prentice Hall, 1971)
2. Nasar, S. A., *2000 Solved Problems in Electromagnetics*, Schaum's series, (McGraw- Hill, 1992)
3. Puri, S. P., *Classical Electrodynamics*, 2nd edition, (Tata McGraw-Hill Pub., 1997)
4. Ritz, J. R. and Millford, F. J., *Foundations of Electromagnetic Theory*, (Prentice Hall India)
5. Jackson, J. D., *Classical Electrodynamics,* 3rd edition, (Wiley Eastern Ltd, 1998)
6. Panofsky, W. K. H. and Phillips, M., *Classical Electricity and Magnetism*, 2nd edition, (Addison-Wesley, 1962).
7. Griffiths, D. J., *Introduction to Electrodynamics,* (Prentice Hall of India, 2009)

PI-552 Quantum Mechanics-II (L2-T1-P0-CH3-CR3)

Review of angular momentum, general formalism of angular momentum, addition of angular momenta, Clebsch-Gordon coefficients,

Time-independent perturbation theory; non-degenerate case, first-order and second-order perturbations, degenerate cases, first-order Stark effect in hydrogen atom,

Time-dependent perturbation theory, Fermi's golden rule, transition probability,

WKB approximation, Ritz-variational method,

Scattering theory, partial wave analysis and phase shift

Relativistic quantum mechanics: Relativistic wave equation (Klein-Gordon and Dirac equations), elementary idea about field quantization,

Textbooks:

1. Schiff, L.S., *Quantum Mechanics,* (Tata McGraw-Hill, 2004)
2. Zettili, N., *Quantum Mechanics*, (John Wiley & Sons, 2001)

Elective

Elective

Semester X

PI 599 Project-II (L0-T0-P10-CH20-CR10)

PI-553 Atomic and Molecular Spectroscopy (L2-T1-P0-CH3-Credit 3)

Atomic emission and absorption spectra (AES and ASS), series spectra in alkali and alkaline earths, LS and jj coupling in central field approximation,

Spectra of diatomic molecules, pure rotation, pure vibration; vibration-rotation and electronic spectra, Born-Oppenheimer approximation and its application to molecular spectroscopy, formation of bands, structure of bands, dissociation and pre-dissociation, valence-bond theory, molecular orbital theory, bonding and anti-bonding of electrons for equal nuclear charges, energy level of symmetric top molecules, potential energy function,

Morse potential function, Raman spectroscopy, electron spin resonance (ESR) spectroscopy, nuclear magnetic resonance (NMR) spectroscopy, Mossbauer spectroscopy

Textbooks:

1. White, H. E., *Introduction to Atomic Spectra,* (McGraw-Hill, New York, 1934)
2. Herzberg, G., *Atomic Spectra and Atomic Structure,* 2nd edition, (Dover Publications, 2010)

PI-412 Plasma and Astrophysics (L2-T1-P0-CH3-CR3)

Basic plasma concepts: Debye shielding, plasma frequency, plasma parameter; motion of charged particle in electromagnetic field; uniform E and B fields, gradient B drift, parallel acceleration and magnetic mirror effect,

Waves in plasma, electron and ion plasma waves, their dispersion relations and properties, fundamental equations of magneto-hydrodynamics (MHD), the MHD approximation, hydromagnetic waves, plasma confinement schemes, plasma in space,

Introduction to the interstellar medium: Neutral and ionized gas, gaseous nebulae, HII regions, supernova remnants, photo-dissociation regions, different phases of the interstellar medium: cold neutral medium, warm neutral and ionized medium, hot medium, diffuse clouds, dense clouds,

Radiative processes: Radiative transfer, emission and absorption coefficients, emission and absorption lines, the role of thermal and free electrons

Textbooks:

1. Bellan, P. M., *Fundamentals of Plasma Physics*, 1st edition (Cambridge University Press, 2008)
2. Chen, F. F., *Introduction to Plasma Physics and Controlled Fusion*, 2nd edition, Vol. 1, (Springer, 1984)

PI-518 General Theory of Relativity (L2-T1-P0-CH3-CR3)

Tensor analysis: Covariant and contravariant tensors, quotient rule, metric tensor, Christoffel symbol, covariant derivative of contravariant and covariant tensors, equations of geodesics, Rhemmann-christeffel tensor, Ricci tensor, scalar curvature, Biranchi identity, Einstein tensor,

Elements of general theory of relativity: Brief review of special theory of real Mincowskhi dgn, equivalence ppl & ppl of general congruence, Einstein equation, low velocity and weak field approximation of Einstein field equation, gravitational waves, Solution of EFE, static and Schwarzschild solution of Einstein equation, exterior and interior solutions, Schwarzschild singularity & concept of black hole, planetary orbits, bending of light, advance of perihelion of mercury and gravitational red shift, Shapiro delay, early Universe, the big bang theory vs. steady state theory, primordial Helium abundance, CMBR, decoupling of matter and radiation, formation of galaxies, gravitational lensing and microlens, elements of quantum gravity and quantum cosmology, Hawking radiation

PI-510 Advanced Material Sciences (L2-T1-P0-CH3-CR3)

Free electron theory of metals, electronic heat capacity, electrical conductivity, thermal conductivity, Wiedemann-Franz law.Motion of electrons in periodic potential, Bloch theorem, Kronig Penney model, band theory of solids, Brillouin zones; insulators, semiconductors and metals, Fermi surface, holes, intrinsic and extrinsic semiconductors, concept of effective mass and law of mass action, study of Fermi surface; cyclotron resonance, de Hass-van Alphen effect, electron motion in 2-dimension, quantum Hall effect,

Dia, para and ferro magnetism; Langevin's theory of dia and para magnetism, Pauli paramagnetism, exchange interaction, spin waves and magnon dispersion relation, Neutron scattering from magnetic materials-structure studies, elements of ferrimagnetism and antiferromagnetism,

Dielectric constant, polarizability, ferroelectricity, Clausius-Mossoti relations,Thermal conductivity of insulators, Normal and umklapp processes, Vacancies, Colour cenres, Luminescence, dislocations, Burgers vector, crystal growth

Textbooks:

PI-511 Super Conductivity and Critical Phenomena (L2-T1-P0-CH3-CR3)

Review of superconductivity: Type I & Type II superconductors, Thermodynamics of superconductivity, Rutger's formula, London equations, Frohlich model, e-p-e interaction, Cooper pairs, Concept of penetration depth & coherence length, Pippard's equation, G-L parameters, elements of BCS theory, spin analogue treatment of Anderson.

Vortex state and flux pinning, Quantized vorticity, Energy between vortex states, Flux quantisation, A.C. & D.C. Josephson effects, SQUID, Need for high temperature superconductors (HTSC), Cuprate and non cuprate based superconductors (YBCO, BSSCO etc. and MgB_2), Application and limitations of HTSC in high voltage cables, magnetic levitation, ship propulsion and magneto-encephalography etc.

Critical Phenomena: Phase transitions in different systems, First order and second order, Thermodynamics and statistical mechanics of phase transition. Eherenfest's classification. Examples of critical phenomena: liquid-gas, paramagnetic-ferromagnetic, normal to superconductor, and superfluid transitions. Phase diagrams. critical point exponents and exponent inequalities.
Models: Spin-1/2 and Spin-l Ising Models, q-state Potts model, X-Y and Heisenberg models. Universality. Spin plasma and classical-quantum transition of behaviour.

Mean Field Theory: Mean Field Theory for Ising model, Landau theory, Correlation functions, Scaling hypothesis.
Transfer matrix: Setting up the transfer matrix, Calculation of free energy and correlation functions, Results of Ising model.
Series Expansion: High and low temperature series, application in 1D Ising model, Analysis of series. Renormalization group, flow in parameter space, scaling and critical exponents, scaled variables. Basic concept of bifurcation, chaos and patterns.

6. Chaikin, P. M. and Lubensky, T. C., *Principles of condensed matter Physics*, (Cambridge, 2000)

PI-513 Physics of Thin Films (L2-T1-P0-CH3-Credit 3)

Thin films and thick films, their differences, deposition techniques of thin films and thick films, physical vapour deposition (PVD), chemical vapour deposition, electroless or solution growth deposition, electrochemical deposition (ECD), screen printing of thin films, Nucleation and growth processes, structure of thin films, epitaxial growth (VPE, MBE, MOCVD, etc.), thin film thickness measurement,

Analytical and characterization techniques, mechanical, electrical, electronic and dielectric properties of thin films, transport phenomena in semiconducting and insulator films, superconductivity of thin films and HTSCs (high temperature superconductor films),

Applications of thin films in electronics, thin films resistors, capacitors and active devices, thin film transducers, thin film, solar cells

3. Maissel, L. I. and Glang, R., *Handbook of Thin Film Technology*, (McGraw-Hill, 1970)

PI-514 Physics of Solid State Devices (L2-T1-P0-CH3-CR3)

Carrier transport phenomena: Non degenerate and degenerate semiconductors, high field transport, abrupt and graded junctions, heterojunctions, superlattices, resonant tunneling, energy band profile and drift-diffusion process for hetero structures, role of intermediate and surface states, field effect transistors using nanostructures (CNTs, Fullerenes, graphene and hybrid systems),

Magnetotransport and multiferroics: Giant magneto resistance (GMR) and colossal magneto resistance (CMR) effects, spin injection and manipulation, Shubnikov–de Haas effect, frequency dependent dielectric properties, CBH model, multi-ferroic systems, relaxor ferroelectrics, DRAM and FRAM, piezoelectric actuators, shape memory alloys, quantum corrals,

Quantum transport and electromechanical effects: Tunnel diode and IMPATT, hot electron effects, drain induced barrier lowering, micro- and nano- electromechanical systems (MEMS/NEMS), AFM and MFM, space charge limited currents, ideality factor, Fowler-Nordheim equations, field emission source/devices,

Lasing and optical modulation: Multilayer heterojunctions for LEDs and lasers, white light LED, quantum well, quantum dot and quantum cascade lasers, optical modulation (oscillation and amplification), UV light sensing and photoconductivity,

Single electron devices: quantum confinement, energy states of spatially confined electrons, mesoscopic phenomena, ballistic scattering, quantum point contacts, charging split-gate quantum dot, Coulomb blockade, single electron transistors, Landau quantization and quantum Hall effect

PI-519 Surface Science (L2-T1-P0-CH3-CR3)

Surface and its specificity, surface structure, Terrace-Ledge-Kink model, binding sites and diffusion, surface diffusion model, bulk electronic state, surface electronic state, Energy levels at metal interfaces, structural defects at surfaces - point defects, steps, faceting, adatoms, dislocations,

Growth and epitaxy, growth modes, interfaces, surface energy and surface tension, surface plasmonics,
Non-equilibrium growth, Langmuir-Blodgett films, self-assembled monolayers, thermodynamics and kinetics of adsorption and desorption, binding energies and activation barriers, adsorption isotherms, rate of desorption, lateral interaction,

Chemisorption, physisorption and dynamics, heterogenous catalysis process,
Atomistic mechanisms of surface diffusion – hopping mechanism, atomic exchange mechanism, tunneling mechanism,

Surface analysis: scanning probe microscopy, photoelectron spectroscopy, Auger electron spectroscopy, electron energy loss spectroscopy, low energy electron diffraction

Textbooks:

PI-520 Nanostructures (L2-T1-P0-CH3-CR3)

Introduction to nanoscale materials: Quantum mechanical treatment, parabolic well, rectangular well, triangular well, cylindrical well and spherical well; quantum well, quantum wire and quantum dots; quantum size effect, size and dimensionality effects of density of states, Bohr excitons, strong and weak confinements, oscillator strength; blue-shift energy and effective mass approximation model; semiconductor nanoparticles, nanorods and nanotubes; metallic nanostructures; carbon nanotubes, graphene and layered systems;

Surface properties: Phonons in nanostructured systems, surface optic phonons, surface plasmons; interfacial charge transfer, grain growth, surface defects; Langmuir relation, Ostwald ripening, Hall-Petch relation, grain correlated properties,

Synthesis techniques: Top-down vs. bottom-up techniques, sol-gel method, solution growth and hydrothermal routes, mechanical milling and solid state reaction techniques, chemical and photochemical reduction routes, thermal evaporation and e-beam evaporation methods, molecular beam epitaxy,

Analytical tools: X-ray diffraction, optical absorption and emission spectroscopy, Raman spectroscopy, scanning and transmission electron microscopy,

Green nanotechnology, challenges in nanotechnology

Textbooks:

1. Ariga, K., Manipulation of Nanoscale Materials: An Introduction to Nanoarchitectonics, (Royal Society of Chemistry, 2012)

PH-539 Advanced Condensed Matter Physics and Materials Science (L2-T1-P0-CH3-CR3)

Fermi surface; cyclotron resonance, de Hass-Van Alphen effect, electron motion in 2-dimension, Quantum Hall effect, Dia, para and ferro magnetism; Langevin theory of dia and para magnetism, Curie-Weiss law, Pauli paramagnetism, exchange interaction, spin waves and magnons, dispersion relation, neutron scattering from magnetic materials-structure studies, elements of ferrimagnetism and antiferromagnetism. Neel temperature,

Dielectric constant, polarizability, ferroelectricity, displacive- nondisplacive and order-disorder types, Kronig-Kramer relations, Clausius-Mossoti relation, ferroelasticity

Perfect conductors, superconductors, Meissner effect, critical magnetic field, transition temperature, energy gap parameter, isotopic effect, Type I & Type II superconductors, vortex state and flux pinning, thermodynamics of superconductivity, condensation energy, London equations and concept of penetration depth **(**λ).

Frohlich model, e-p-e interaction, formation of Cooper pairs, coherence length (ξ), Pippard's equation, G-L parameters, elements of BCS theory,

Flux quantization, single particle tunneling and Josephson effect, superconducting quantum interference device (SQUID),

Giant magneto resistance (GMR) and colossal magneto-resistance (CMR)

All books prescribed under *Condensed Matter Physics & Materials Science-I (PH-501)*

References:
All books prescribed under *Condensed Matter Physics & Materials Science-I (PH-501)*

PI-554 Soft Condensed Matter Physics (SCMP) (L2-T1-P0-CH3-CR3)

Phases of soft condensed matter: Colloidal fluids and crystals; Poisson-Boltzmann theory, DLVO theory, sheared colloids, polymer solutions, gels and melts; emulsions and foams, micelles, vesicles, surfactants, nature of amphiphilic molecules, lyophobic and lyophilic molecules, self assembly, Langmuir-Blodgett technique, forces, energy and bonding, microgels, wetting-dewetting phenomena, super-hydropbobic surfaces, phospholipids and glycolipids, polyelectrolyte, polysachharides., biopolymers and biodegradable polymers.

Liquid crystals: Frank free energy, Landau-de Gennes model of isotropic-nematic transition. Thermotropic and lyotropic LCs, orientational order, order parameters, Onsager equation, Landau description of the isotropic to nematic phase transition, optical retardation, Freederiksz transition.

Flow behaviour: Ferrofluids, shear thickening and shear thinning, diffusion and fluid flow, shear flow, linear and non-linear rheology, microfluidic devices, life at low Reynold number, electrostatics in soft matter, dynamics at equilibrium; glass formation and jamming, percolation model, random walks and dynamics, sandpile model, soft glassy rheology; Energy-elasticity, entropic spring, visco-elastic models, de Gennes-Taupin length, introduction to shape transitions.

Membrane physics: Membrane structure and membrane proteins, Bioenergetics, excitable membranes, resting potential, Hodgkin-Huxley model, ion channels, action potentials, patch clamp method.

Experimental techniques: Contact angle measurements, polarized light optical microscopy, small angle scattering and diffraction, dynamic light scattering and diffusive wave spectroscopy; methods for studying dynamics of soft matter using synchrotron x-ray and neutron scattering; rheometry; scanning probe and traction force microscopy, confocal microscopy.

PI-507 Digital Signal Processing (L2-T1-P0-CH3-CR3)

Introduction: digital signal processor, signals and systems. sampling and quantization,

Specialized transforms: z-transform, discrete cosine transform, Hilbert transform, Fourier transform, DFT, FFTs, convolution,

Digital filters:
FIR filters-Linear phase filter, windowing method, standard and multi band, constrained least square filtering, arbitrary response filter design
IIR filter- design, Butterworth, Chebyshev type I and type II, elliptical, Bessel

Spectral analysis: Welch's method, multilayer method, Yule-Walker method, covariance methods, MUSIC and eigenvector analysis method,

Applications in real time problems like extraction of voice from noisy environment, filtering the signal using digital filters etc.

Textbooks:

5. Sharma, S., *Signals and Systems*, (Katson Books, 2010)

PI-508 Digital Communication Systems (L2-T1-P0-CH3-CR3)

Introduction to digital communications, sampling techniques, ESD, PSD, autocorrelation function, orthogonality,

Pulse modulation: PAM, PCM, DPCM, delta modulation, ADM,

Data transmission: FSK. PSK, DPSK, Mary modulation systems, error probability calculations,
Random process: PSD of random process, transmission of random process through linear systems, optimum filtering,

Behaviour of digital communication system in presence of noise: optimum threshold detection, OBR, carrier systems ASK, FSK, PSK and DPSK, spread spectrum systems,
Optimum signal detection: Gaussian random process, optimum receiver, nonwhite channel noise,

Error control coding: block and convolution codes, combined modulation and coding, examples of typical communication systems: Modems, local area networks, computer communication, microwave, satellite, optical, cellular mobile etc.

Textbook:

1. Lathi, B. P., *Modern Analog and Digital Communication Systems*, (Oxford University Press, 2009)

PI-516 Microprocessor and Digital Signal Processing Based Systems (L1-T0-P2-CH5-CR3)

Introduction to microprocessors programming and interfacing,

Transducers and sensors: Load cells, strain gauges, weighing transducers, temperature sensors (e.g. RTDs, thermocouples, semiconductor sensors, etc.), displacement sensors (e.g. LVDTs, RVDTs, encoders, linear scale etc.), proximity sensors, magnetic sensors, opto-electronic sensors, fiber optic sensors, motion transducers (velocity, vibration and acceleration), fluid transducers, pressure transducers, level transducers, etc.,

The signal conditioning circuits like current booster, current to voltage converter, instrumentation amplifier, level shifter, 4-20mA current loop, etc. with their design,

The open loop, feedback loop and feed forward loop and servo controllers with details of PI, PD, PID controllers, tuning methods of the same and also auto tuning methods,

Interfacing of sensors, stepper motor designing of the signal conditioning circuits along with microcontrollers

Textbook:

1. Hall, D., *Microprocessors and Interfacing,* 2nd edition, (Tata McGraw-Hill, 1999)

Reference Book:

1. Gaonkar R. S., *Microprocessor Architecture, Programming, and Applications with the 8085*, 5th edition, (Prentice Hall, 2002)

PI-517 Microwave Systems and Antenna Propagation (L2-T1-P0-CH3-CR3)

Review of Maxwell's equations: Electromagnetic radiation, plane waves in dielectric and conducting media, reflection and refraction of waves, Transmission lines, smith chart and its applications, rectangular wave guide, rectangular cavity, modes in waveguides and cavities, dielectric filled wave guides, dielectric slab guide, surface guided waves, non-resonant dielectric guide, modal expansion of fields and its applications

Microwave semiconductor devices: Microwave transistor, microwave tunnel diode, varactor diode, Schottky diode,
MESFET: Principle of operation, MOS structure, MOSFET microwave applications, transferred electron devices: Gunn diode, LSA diode, modes of operation,

Microwave generation and amplification, avalanche effect devices: Read diode, IMPATT diode;
Klystron: velocity modulation process, bunching process, output power and beam loading, reflex klystron: power output and efficiency; traveling wave tubes, magnetron,

Microwave waveguide components: attenuators, phase shifters, matched loads, detectors and mounts, slotted-sections, E-plane tee, H-plane tee, hybrid tees, directional couplers, tuners, circulators and isolators, quarter wavelength transformer, multi section transformer matching section,
Lumped planar components: capacitor, inductor and balun; power dividers, directional couplers, analysis of these components using the S-parameters, microwave planar filters, planar non reciprocal devices, signal generators: fixed frequency, sweep frequency and synthesized frequency oscillators; frequency meters, VSWR meters, measurements of frequency, attenuation, VSWR and impedance,

Antenna characteristics: radiation patterns, directive gain, side lobe, back lobe, polarization, co-polarization and cross polarization level, frequency reuse, beam width, input impedance, bandwidth, efficiency, antenna types: wire, loop and helix antennas, aperture antenna-slot, waveguide and horn antenna; parabolic reflector antenna,

Microwave integrated circuits: different planar transmission lines, characteristics of microwave integrated circuits,
microstrip antenna: rectangular and circular patch, feed for microstrip antennas: probe feed, microstrip line feed, aperture feed, electromagnetically fed microstrip patch

PI-501 Quantum Field Theory (L2-T1-P0-CH3-CR3)

Introduction to fields: Lagrangian and Hamiltonian formulation of continuous systems, introduction to relativistic field theories, Noether's theorem, Four-vector notations, Lorentz transformations, natural units,

Many particle systems: Non-relativistic quantum systems, free fields, Klein-Gordon equation, non-relativistic many particle systems, relativistic free scalar fields, Dirac equation, antiparticles, free Dirac fields,

Field quantization: Action principle, quantization of scalar fields, quantization of Dirac fields, quantization of vector fields, Lorentz transformation and invariance, parity, charge conjugation and time reversal, CPT theorem,

Interactions among fields: Interactive pictures, S-matrix, Wick's theorem, second-order processes, position space Feynman rules, momentum space Feynman rules; cross-sections

PI-555 Particle Physics-I (L2-T1-P0-CH3-CR3)

Conservation laws: strong, weak and electromagnetic interactions; invariance under charge (C), parity (P) and time (T) operators, non-conservation of parity in weak interactions, Quark model: Quark model of mesons and baryons; quarks, gluons and colours, colour factors, symmetry groups - SU(2), SU(3), eightfold way of classification, discovery of J/Ψ and upsilon, quark masses,

Parton Model: Probing charge distribution with electrons, form factors, electron-proton scattering - proton form factor, elastic electron-proton scattering, Partons, Bjorken scaling

Structure of hadrons: Quantum chromodynamics - dual role of gluons, gluon emission cross-section, scaling violation

PI-556 Particle Physics-II (L2-T1-P0-CH3-CR3)

Weak Interactions: V-A theory, nuclear β-decay, neutrino-quark scattering, Cabibbo angle, weak mixing angle, CP violation,

Gauge theory: Local and global gauge theory, non-Abelian gauge theory, spontaneous symmetry breaking, Higg's mechanism, Goldstone theorem,

Unification of interactions: Electro-weak interaction, Weinberg-Salam model, grand unified theories, proton decay, neutrino oscillations and neutrino masses, elements of super-symmetry, elements of string theories, present experimental status

PI-521 Fundamentals of Plasma Physics (L2-T1-P0-CH3-CR3)

Basics of the Plasma State: Ionized gas, Saha ionization equation; Collective degrees of freedom, Definition of Plasma, Concept of Plasma Temperature, Debye shielding, Quasi-neutrality, Plasma parameters, Plasma approximation; Natural existence of Plasma; Overview of realistic applications, Confinements, Controlled thermo-nuclear reactions, Fusion devices like Tokamak, Stellarator and ITER.

Single-particle motion: Dynamics of charged particles under electro-magnetic fields, Hamilton-Lagrange formalism; Particle drifts, EXB drifts, Grad-B drift, Curvature drift, Polarization drift, Adiabatic invariants and their technological applications.

Plasma models: Kinetic theory, Vlasov equation and its various moments; Fluid theory, Magneto-hydrodynamic (MHD) theory and their basic governing equations.

Waves and oscillations in Plasma: Fluid theory of Plasma waves, Plasma oscillations, Electron-acoustic waves, Ion-acoustic waves; Electrostatic ion waves perpendicular to magnetic field, Electromagnetic waves perpendicular to magnetic field, Magnetosonic waves and Alfven waves.

Equilibrium and stability: Theory of hydrodynamic stability in Plasma; Plasma instabilities and classification; Two-stream and gravitational instabilities; Overview of their natural occurrence.

PI-522 Plasma Generation and Diagnostics (L2-T1-P0-CH3-CR3)

Pressure gauges: Pirani Gauge, thermocouple gauge, thermistor gauge, McLeod gauge, ionisation gauge and Penning gauge,

Vacuum pumps: Introduction to vacuum pumps, working principle, types of pump, basic concept of rotary, diffusion and turbomolecular pumps; pump throughput, conductance and Ho factor,

Plasma diagnostics: Probes and their varieties; Langmuir probe, magnetic probes; optical and spectroscopic (LIF) diagnostic techniques; I-V characteristics and plasma temperature measurement, Paschen curve,

Normal mode in Plasma: Experimental determination of phase velocity, group velocity and dispersion properties of ion-acoustic wave in hydrogen plasma

PI-509 Fiber Optics and Optoelectronics (L2-T1-P0-CH3-CR3)

Introduction to nature of light, optical fiber modes and configurations, mode theory for circular waveguides, single mode and graded-index fibers, fiber materials, fiber fabrication, mechanical properties of fibers

Attenuation in optical fibers, signal distortion in optical fibers, pulse broadening mechanism, mode coupling, design & optimization of single mode fibers. Source to fiber launching, fiber to fiber joints, LED coupling to multimode and single mode fiber, fiber splicing, optical fiber connector, non-linear effects in fibers, Raman scattering and Brillouin scattering in fibers, fiber Bragg gratings, communication network using fibers, WDM system,

Optical sources: Basic physics of semiconductor optoelectronic devices, light emitting diodes (LEDs), laser diode, light source linearity, modal partition and reflection noise, reliability consideration. fiber laser, fiber based optical amplifier

Optical detectors: Physical principles of photodiodes, PIN and avalanche photodiode, photo detector noise, detector response time, photodiode materials

Textbook:

1. Ghatak, A. K. and Thyagarajan, K., *Introduction to Fiber Optics,* (Cambridge Publisher, 2004)
2. Keiser, G., *Optical Fiber Communications*, (McGraw-Hill, 2010)

3. Franz, J. H. and Jain, V. K., *Optical communications Components and systems*, (Narosa, 2009)

PI-557 Photonics (L2-T1-P0-CH3-Credit 3)

Non-linear photonics: Non-linear optical media, second-order and third-order non-linear optics, three-wave mixing, frequency and phase matching, self phase modulation, self focusing, spatial soliton, Raman amplification, Brillioun devices,

Electro-optic effects, intensity modulators, phase modulators, travelling wave modulators,
Acousto-optic devices: Photoelastic effect, acousto-optic diffraction, acousto-optic modulators,

Magneto-optic devices: Magneto-optic effects, Faraday effect, magneto-optic Kerr effect,

Integrated optical modulators: Phase and polarization modulation, Mach-Zehnder modulator, coupled waveguide modulator,

Photovoltaic devices: Photovoltaic device principles, equivalent circuit of solar cell, temperature effects, solar cell materials, devices and efficiencies.

Photonic switches, photodetectors, optical memory devices, optical communication devices,

Text and Reference Books:

3. Boyd, R. W., *Non-Linear Optics*, (Elsevier, 2006) Second edition
4. Fukuda, M., *Optical Semiconductor Devices*, (John Wiley & Sons, 2005)
5. Chuang, S. L., *Physics of Photonic Devices*, (Wiley Series, 2009)

PI-517 Microwave Systems and Antenna Propagation (L2-T1-P0-CH3-CR3)

As under Electronics

PI-546 Fourier Optics and Holography (L2-T1-P0-CH3-CR3)

Analysis of 2-dimensional signals: Fourier series; 2-dimensional signals; Fourier transform (FT) theorems; sampling theorem

Diffraction Theory: Huygens' diffraction theory, Kirchhoff 's diffraction theory, Fresnel diffraction, Fraunhofer diffraction, Talbot imaging

Wave-optics analysis of coherent systems: Conditions for imaging and Fourier transformation by a lens, optical transfer function (OTF) of a lens,

Recording Materials: Photographic emulsions, thermoplastics, photopolymers, photo-refractives, spatial light modulators (SLM), charge coupled devices (CCD) and CMOS, Applications: Filter types, Abbe-Porter experiment, 4-f optical processor, Zernike phase-contrast, Vander Lugt Filter, joint transform Correlator, matched filtering, inverse filter, processing of side looking radar (SAR) data

Holography: Recording and reconstruction; hologram types: thin, thick, transmission, reflection, amplitude and phase; computer generated holograms, hologram interferometry (HI), applications of HI, digital holography

PI-558 Quantum Electronics (L2-T1-P0-CH3-CR3)

Introduction to quantum electronics, review of electromagnetic theory, quantization of the electromagnetic field, coherent states,

Gaussian beams, optical resonators and rate equations, types of lasers,

Physical origin of nonlinear polarization, second harmonic generation, birefringence and quasi-phase matching, self-phase modulation, optical soliton,

Stimulated Raman scattering, higher-order nonlinearlities and phase conjugation, Q-switching and mode-locking,

Propagation in wave guides, photonic crystals, negative dispersion

Textbooks:

1. Yariv, A., *Quantum Electronics*, 3rd edition, (Wiley, 1989)
2. Saleh, B. E. A. and Teich, M. C., *Fundamentals of Photonics*, (John Wiley and Sons, 1991)

PI-559 Nanophotonics (L2-T1-P0-CH3-CR3)

Light emission and optical interactions in nanoscale environments: The multipole expansion, the classical particle-field Hamiltonian, radiating electric dipole, spontaneous decay, classical lifetime and decay rates, dipole-dipole interactions and energy transfer, delocalized excitations (strong coupling),

Surface Plasmon: Optical properties of noble metals, Drude Somerfield theory, surface plasmon polariton at plane interface, properties of surface plasmon polaritons, excitation of surface plasmon polaritons, surface plasmon sensors, surface plasmon in nano-optics,

Photonic crystals: Electromagnetic in mixed dielectric media, symmetries and solid state electromagnetism, 1-D, 2-D and 3-D photonic crystal, photonic crystal fiber, designing photonic crystal for applications

8. Novotny, L. and Hecht, B., Principles of Nano-optics, (Cambridge University Press, 2009)

PI-560 Optical Metrology (L2-T1-P0-CH3-CR3)

Introduction to Basic Optics, Optical components and systems, Laser beams and their propagation, Interferometry /phase-shift interferometry, Holography and holographic interferometry, Speckle phenomenon and speckle interferometry, Moiré phenomenon and moiré interferometry, Photo-elasticity, Microscopy

Measurement of Physical Parameters: Refractive Index Measurement; Solid, Liquid and Gases, Complex Refractive Index, Refraction and total internal reflection methods, Interferometry-Comparison of RI, Dispersion Measurement, Absorption Measurement, Reflectivity Measurement of low and very high reflectivity surfaces

Measurement of Geometrical /shape parameters:
Optical Workshop Measurement; Flatness, Angles, Straightness, Curvature, Surface roughness, Mirror Testing, Lens Testing, Thickness/ step height
Industrial Measurement; Straightness, Surface roughness, Flatness, Deformation, Vibration, Temperature, Contouring, Pressure, Flow, Length

Fiber and waveguide based sensing: Fiber Sensors, Bragg Gratings, m-line spectroscopy, Waveguide sensors
