

# *SIL FieldWorks Language Explorer (FLEX):* Digitization of Field Data

---

MAYANK JAIN

JNU, NEW DELHI

# Tool (software) for managing data

---

After data collection, there comes an **immediate requirement** of a good software to digitally record, store and manage the data collected during the field.

FLEx is one such software which is a **suitable** for the required purpose.

# FLEx: What is it?

---

FieldWorks Language Explorer helps to manage cultural and linguistic data from initial stage of collection of data through submission for publication.

It is a **data management** program that helps in **recording, organizing and analysis of linguistic data**.

FLEx is a specialized software with **built-in capability** for the kind of data linguists need to store and manage.

Various components of FLEx interact together to help in managing data.

# Accessing the software

---

FLEx is developed by an organisation named SIL International. This software can be freely downloadable from the link given below:

Available for **free download** from <http://fieldworks.sil.org/download/>

# What does FLEx does?

---

Creates **dictionaries** (including ***multilingual support*** (for example, English, Hindi, Tamil) and multiple ***scripts*** (for example, Roman, Devanagari, Bengali etc.))

For example: Great Andamanese dictionary is a tri-lingual (Great Andamanese, English, Hindi) and tri-scriptal (IPA, roman, devanagari) dictionary with pictorial illustrations and audio files (in digital version).

# What does FLEx does?

---

**Collects words** based on *semantic domains* (such as Animal, Body parts, Food)

# What does FLEx does?

---

Stores **sentences** and helps in their morphological **analysis**.

Shows **concordance** (details of occurrence of **words, sentences in the database**).

Create a grammar sketch

Record anthropological field notes

And much More.....

# How does it looks!

---

Screens are typically divided into **two or more panes**.

The far **left** pane is the **Navigation pane** (*modules and sub-areas of modules*)

**Other panes** that displayed *depend on the choice selected in the Navigation pane*.

# 5 Modules (areas) of FLEx:

---

- Lexicon: dictionary
- Texts & Words: interlinear analysis
- Grammar: grammar sketch
- Notebook: store cultural and other research notes
- Lists: semantically categorized word lists

# Integration among different areas

---

The Lexicon, Texts, and Grammar areas have the **same database** on which they work.

**Lexicon area:** work on Lexicon.

In the **Texts & Words area**, sentences are glossed , new lexical entries are created directly from Text.

In the **Grammar area**, helps in getting grammar of the language.

# Opening an existing project

---

1. Choose ***'Open a project'***
2. Select the desired project from ***'Choose a project'***

# Lexicon Module

---

The Lexicon area is where we can ***create, edit, and manage dictionary***.

***Multilingual support*** - Multiple languages can be included in the dictionary to make multilingual dictionaries e.g. English, Hindi, Tamil

Multiple ***orthographies*** – Different scripts can be used e.g. Roman, Devanagari, IPA, Perso-Arabic

# Creating a new project

---

1. Choose 'Create a new project'

2. New FieldWorks Project

- ***Name the project*** – It is usually name of the language e.g. Toto
  - Choose **Ethnologue** code of the language
- ***Vernacular language writing system*** – choose the script used for the language.
- ***Analysis language writing system*** – choose a analysis language

3. Click OK

4. Follow the instructions in the following dialogue box till the installation process gets completed.

# Doing Lexicon

---

## Entering lexical items

### *Insert – New Entry (ctrl + e)*

- type word in **Lexeme Form**
- type of morpheme in **Morpheme Type**
- give meaning in **Gloss**
- Select grammatical category (POS) from **Category** dropdown menu
- Click on **create**

# Lexicon: Basic Fields

---

Lexeme, Gloss, POS, *Semantic Domain*, *Lexical relation*, *variant*

*Example*

*Culturally relevant information*,

*Source*,

*cross reference*

*Multimedia information*

*others*

# Source

---

A possible format of the source could be as follows:

Language-helper/Investigator/Date/Place/Original-Audio&Video-Recording-Detail/Notebook  
information

# Insert Sound

---

1. **Insert** ---- sound or movie
2. **Browse** to the sound file.
3. **Select** the audio file.

**Note:** Audio files should preferably in **WAV**.  
preferably < 1MB

# Picture insertion

---

Go to **sense area** --- **Insert** --- **Picture** --- **Browse** to the Picture folder---- **select** picture ----- **click** OK.

**Note:** Image files should preferably in **JPG/JPEG**.

preferably < 1MB

# Sub-areas of Lexicon

---

**Lexicon Edit:** create and edit particular lexemes.

**Browse:** In this view, dictionary entries are arranged in rows. Each row has consist of one dictionary entry.

**Dictionary:** presents your lexicon formatted as an alphabetized dictionary.

# Collecting words through Semantic domains

---

**Semantic domain** are used to group words on the basis of their meaning.

**Collect Words:** allows to collect words based on semantic domains. Each domain consists of a short description and a series of elicitation questions with example words in English.

**Classified Dictionary:** Displays the lexicon as a semantically classified dictionary using the list of semantic domains in the **Semantic Domain** field.

# Working on Lexicon

---

Sorting

Filtering

Bulk Edit

# Texts & Words

---

The Texts & Words module is designed to help in *morphemic analysis*.

# Sub-areas of Texts & Words

---

The several **sub-areas/ views** in the Text & Words *display data in various ways* and help to accomplish specific tasks.

**Interlinear Texts:** morphological analysis of text.

**Concordance:** gives a *concordance of wordforms (words, morphemes)* from the text corpus.

**Complex Concordance:** concordance on basis of complex criteria.

**Word List Concordance**

**Word Analysis**

**Statistics:** Statistics of the words and sentences.

# Text and Words ---Interlinear Texts

---

## *Info:*

Metadata regarding text

Title, Abbreviation, Source, date etc

## **Baseline**

Sentences are entered here. Each sentence is typed in a separate line.

# Gloss and Analyze

---

The gloss and analyze tabs are where the **interlinearisation** is carried out.

You can **break up a word into morphemes**, and associate each of those with a lexical entry (CREATE A NEW LEXICAL ENTRY).

The interlinear tool will suggest an analysis you have previously made for a word when you encounter it again.

# Print view

---

Print view is a read-only view of the data. This independent view is useful for configuring which lines are shown merely for the purposes of exporting.

# Texts and Words

---

**Concordance**

**Complex Concordance**

**Word List Concordance**

**Word Analysis**

**Statistics**

# Back up

---

*To save the loss of data*, FLEEx projects should be backed up regularly.

File -- Project Management – Back up this project --- select the check boxes and browse to select a location to save the project- project is saved with a date and time stamp

# Collaboration among multiple partners

---

Send/Receive Project allows users to collaborate with different colleagues who are working on the same project.

# Interaction with other Language documentation tools

---

FLEx can interact with various language documentation tools such as Lexique Pro, ELAN, WeSay etc so that these softwares can work together to achieve various language documentation goals.

- Dictionary – digital and print
- Audio and video annotation
- Interlinear glosses

# Assignment

---

Assignment 1:

Lexicon:

Minimum 20 words with lexeme, POS, gloss (meaning), semantic domain, source

Provide pictures for 5 words

# Assignment

---

Assignment 2:

Texts and Words:

- Minimum 10 sentences in Baseline, Gloss and Analyze tabs

---

*Thank you*
